Contents

Part I Introduction and Background

1 Introduction and Background ............................................. 3
  1.1 Introduction .......................................................... 3
  1.2 Structure Properties .................................................. 4
  1.3 Physical and Chemical Properties ...................................... 5
  1.4 Spectral Properties .................................................. 5
  1.5 Nomenclature ....................................................... 8
  References .................................................................... 9

Part II Synthesis and Reactions of Iptycenes and Their Derivatives

2 Synthesis and Reactions of Triptycenes and Their Derivatives ........ 13
  2.1 Synthesis of Triptycenes and Their Derivatives ..................... 13
  2.2 Synthesis of Triptycenequinones and Their Derivatives ............ 27
  2.3 Reactions of Triptycenes and Their Derivatives ...................... 34
    2.3.1 Nitration and Amination ...................................... 34
    2.3.2 Acylation ..................................................... 38
    2.3.3 Halogenation .................................................. 40
    2.3.4 Oxidation .................................................... 41
    2.3.5 Reduction ..................................................... 43
    2.3.6 Photochemical Reactions ..................................... 46
    2.3.7 Other Reactions ............................................... 55
  2.4 Synthesis of Extended Triptycene Derivatives ....................... 58
  2.5 Synthesis and Reactions of Homotriptycenes ......................... 69
  References .................................................................... 72

3 Synthesis and Reactions of Pentiptycenes and Their Derivatives ....... 79
  3.1 Synthesis of Pentiptycenes and Their Derivatives ................... 79
  3.2 Reactions of Pentiptycenes and Their Derivatives ................... 87
  3.3 Synthesis of Extended Pentiptycenes Derivatives .................... 98
  References .................................................................... 106
4 Synthesis and Reactions of Other Iptycenes and Their Derivatives... 109
  4.1 Heptiptycene and Noniptycene ........................................ 109
  4.2 Miscellaneous .......................................................... 118
  References ........................................................................ 126

5 Synthesis and Reactions of Heterotriptycenes and Their Derivatives 129
  5.1 The Bridgehead-Substituted Heterotriptycenes ..................... 129
    5.1.1 Derivatives of Nitrogen Group Elements ..................... 129
    5.1.2 Derivatives of Carbon Group Elements ..................... 138
    5.1.3 Other Bridging Atoms ............................................. 142
  5.2 The Heterotriptycenes with Heterocycles ............................ 145
    5.2.1 Derivatives of Nitrogen-Containing Heterocycles ............. 145
    5.2.2 Derivatives of Sulfur-Containing Heterocycles ............. 155
  5.3 Miscellaneous Heterotriptycenes and Their Derivatives .......... 163
  References ........................................................................ 168

6 Preparation of Iptycene-Containing Polymers and Oligomers ....... 173
  6.1 Triptycene-Containing Polymers ..................................... 173
    6.1.1 Triptycene-Containing Non-conjugated Polymers .......... 173
    6.1.2 Triptycene-Containing Conjugated Polymers ............... 182
  6.2 Pentiptycene-Containing Polymers ................................ 186
  6.3 Other Iptycene-Containing Polymers ................................ 192
  6.4 Poly(iptycenes) .......................................................... 196
  6.5 Iptycene-Based Oligomers ............................................. 200
  References ........................................................................ 205

Part III Applications of Iptycenes and Their Derivatives

7 Iptycenes and Their Derivatives in Molecular Machines ........... 211
  7.1 Molecular Gearings ..................................................... 211
  7.2 Molecular Brakes and Ratchets ..................................... 220
  7.3 Molecular Wheelbarrows ............................................... 223
  7.4 Molecular Compasses and Gyrosopes ................................ 224
  7.5 Miscellaneous .......................................................... 226
  References ........................................................................ 227

8 Iptycenes and Their Derivatives in Material Science ............... 231
  8.1 Liquid Crystals .......................................................... 231
  8.2 Optical and Electronic Materials .................................... 237
  8.3 Porous Materials for Adsorption and Separation ................. 242
  References ........................................................................ 248

9 Iptycenes and Their Derivatives in Host–Guest Chemistry ........ 251
  9.1 Triptycene-Derived Crown Ethers .................................... 251
    9.1.1 Triptycene-Derived Cylindrical Macrotricyclic Polyethers ... 251
    9.1.2 Tweezer-Like Triptycene-Derived Crown Ethers ............ 263
9.2 Triptycene-Derived Calixarenes ........................................ 266
9.3 Triptycene-Derived Oxacalixarenes and Azacalixarenes .......... 273
9.4 Other Triptycene-Derived Macroyclic Hosts ....................... 276
9.5 Pentiptycene-Derived Hosts .......................................... 281
References ........................................................................... 286

10 Iptycenes and Their Derivatives in Molecular Self-Assembly ...... 289
10.1 Self-Assembly in Crystal .............................................. 289
10.2 Self-Assembly on Surface ............................................. 305
10.3 Self-Assembly in Solution .............................................. 309
References ........................................................................... 320

11 Iptycenes and Their Derivatives in Coordination Chemistry ...... 323
11.1 Triptycene-Based Ligands .............................................. 323
11.2 Substituted Triptycene-Based Ligands ............................... 326
  11.2.1 Selenium Substitution ............................................. 326
  11.2.2 Germanium and Silicon Substitution ........................... 331
  11.2.3 Phosphorus Substitution ........................................... 333
  11.2.4 Miscellaneous Substitutions ....................................... 340
References ........................................................................... 349

12 Iptycenes and Their Derivatives in Sensors .......................... 353
12.1 Sensors Based on Iptycene-Containing Polymers ................ 353
12.2 Other Iptycene-Based Sensors ....................................... 360
References ........................................................................... 363

13 Iptycenes and Their Derivatives in Molecular Balances ............ 365
References ........................................................................... 371

14 Miscellaneous Applications of Iptycenes and Their Derivatives .... 373
14.1 Medicinal Chemistry .................................................... 373
14.2 Model for Jahn–Teller Systems ....................................... 374
14.3 Artificial Photosynthesis Models ..................................... 376
14.4 Preparation of Carbene .................................................. 378
References ........................................................................... 380
Iptycenes Chemistry
From Synthesis to Applications
Chen, C.-F.; Ma, Y.-X.
2013, XIV, 382 p., Hardcover
ISBN: 978-3-642-32887-9
