Contents

Part I  A Posteriori Error Estimation and Adaptive Methods

An Adaptive MFD Method for the Obstacle Problem 3
P.F. Antonietti, L. Beirão da Veiga, and M. Verani

Reconstruction-Based a Posteriori Error Estimators for the Transport Equation 13
R. Becker, D. Capatina, and R. Luce

A Posteriori Error Estimation by a $Q_1/Q_2$ Hierarchical Basis 23
M. Braack and N. Taschenberger

Adaptive Finite Elements with Anisotropic Meshes 33
W. Huang, L. Kamenski, and J. Lang

Anisotropic Recovery-Based a Posteriori Error Estimators for Advection-Diffusion-Reaction Problems 43
S. Micheletti and S. Perotto

On Computable Bounds of Modeling Errors 53
S. Repin and T. Samrowski

Anisotropic Finite Elements for Fluid-Structure Interactions 63
T. Richter

Adaptive Finite Elements for Semilinear Reaction-Diffusion Systems on Growing Domains 71
C. Venkataraman, O. Lakkis, and A. Madzvamuse

Part II  Computational Electromagnetics

Moment-Based Boundary Conditions for Lattice Boltzmann Magnetohydrodynamics 83
P.J. Dellar
A-Priori Convergence Analysis of a Discontinuous Galerkin Time-Domain Method to Solve Maxwell’s Equations on Hybrid Meshes .......................................................... 91
C. Durochat and C. Scheid

Stabilization of a Degenerate Minimization Problem with the Single-Layer Potential ............................................................... 101
S. Ferraz-Leite

Second Order Finite Volume Scheme for Maxwell’s Equations with Discontinuous Dielectric Permittivity on Prismatic Meshes ........... 111
T.Z. Ismagilov

L. Li, S. Lanteri, and R. Perrussel

Locally Implicit Discontinuous Galerkin Methods for Time-Domain Maxwell’s Equations .................................................... 129
L. Moya

Part III Computational Methods

Application of the Level-Set Method to a Mixed-Mode and Curvature Driven Stefan Problem ........................................ 141
D. den Ouden, F.J. Vermolen, L. Zhao, C. Vuik, and J. Sietsma

On an Efficient Family of Simultaneous Methods for Finding Polynomial Multiple Zeros .......................................................... 149
J. Džunić, M.S. Petković, and L.D. Petković

Multilevel Sparse Kernel-Based Interpolation Using Conditionally Positive Definite Radial Basis Functions ............... 157
E.H. Georgoulis, J. Levesley, and F. Subhan

A Numerical Remark on the Time Discretization of Contact Problems in Nonlinear Elasticity .................................................. 165
C. Groß, R. Krause, and V. Poletti

Numerical Simulation of Anisotropic Surface Diffusion of Graphs ........ 175
D.H. Hoang and M. Beneš

A Special Multiwavelet Basis for Unbounded Product Domains .......... 183
S. Kestler

Parameter Estimation Problems in Physically Based Image Processing ... 191
M. Klinger

Piecewise Polynomial Collocation for Volterra Integral Equations with Logarithmic Kernels .................................................. 201
M. Kolk and A. Pedas
Curvature Calculations for the Level-Set Method ......................... 209
K.Y. Lervåg and Å. Ervik

Multimesh $H^2$-Optimal Model Reduction for Discretized PDEs ......... 219
S.A. Melchior, V. Legat, and P. Van Dooren

The Computation of Long Time Hamiltonian Trajectories for
Molecular Systems via Global Geodesics .................................. 227
H. Schwetlick and J. Zimmer

Part IV Convection-diffusion, Conservation laws,
and Hyperbolic Systems

A Nonlinear Local Projection Stabilization for Convection-
Diffusion-Reaction Equations ............................................. 237
G.R. Barrenechea, V. John, and P. Knobloch

An Improved Optimal Order Mixed Finite Element Method
for Semilinear Transport Problems ....................................... 247
M. Bause, F. Brunner, F.A. Radu, and P. Knabner

A Robust Numerical Method for a Singularly Perturbed
Parabolic Convection-Diffusion Problem with a Degenerating
Convective Term and a Discontinuous Right-Hand Side ............... 257
C. Clavero, J.L. Gracia, G.I. Shishkin, and L.P. Shishkina

Finite Element Methods with Artificial Diffusion for
Hamilton-Jacobi-Bellman Equations .................................... 267
M. Jensen and I. Smears

Adaptive Computation of Parameters in Stabilized Methods
for Convection-Diffusion Problems .................................... 275
V. John and P. Knobloch

The Numerical Study of Singularly Perturbed Differential-
Difference Turning Point Problems: Twin Boundary
Layers ................................................................. 285
P. Rai and K.K. Sharma

Stability of Difference Schemes on Uniform Grids for a
Singularly Perturbed Convection-Diffusion Equation ............... 293
G. Shishkin

Difference Scheme of the Solution Decomposition Method for
a Singularly Perturbed Parabolic Convection-Diffusion Equation ..... 303
L. Shishkina and G. Shishkin
Part V  Discontinuous Galerkin Methods

Implementation of the Continuous-Discontinuous Galerkin
Finite Element Method .......................................................... 315
A. Cangiani, J. Chapman, E.H. Georgoulis, and M. Jensen

Towards A Posteriori Error Estimators for Realistic Problems
in Incompressible Miscible Displacement .............................. 323
J. Chapman and M. Jensen

Application of $hp$–Adaptive Discontinuous Galerkin Methods
to Bifurcation Phenomena in Pipe Flows .............................. 333
K.A. Cliffe, E.J.C. Hall, and P. Houston

$hp$–Adaptive Two-Grid Discontinuous Galerkin Finite Element
Methods for Quasi-Newtonian Fluid Flows ............................ 341
S. Congreve, P. Houston, and T.P. Wihler

Discontinuous Galerkin Methods for Eigenvalue Problems on
Anisotropic Meshes .............................................................. 351
E.J.C. Hall and S. Giani

Two Dimensional Compressible Fluid-Structure Interaction
Model Using DGFEM .......................................................... 361
J. Hasnedlová-Prokopová, M. Feistauer, A. Kosík, and V. Kučera

On $\varepsilon$-Uniform Error Estimates For Singularly Perturbed
Problems in the DG Method .................................................. 369
V. Kučera

Two-Sided a Posteriori Error Estimates for the DGMs for the
Heat Equation ................................................................. 379
I. Šebestová

Distributed Optimal Control of Diffusion-Convection-Reaction
Equations Using Discontinuous Galerkin Methods .................. 389
H. Yücel, M. Heinkenschloss, and B. Karasözen

Part VI  Finite Element and Finite Volume Techniques

An Immersed Boundary Method for Drug Release Applied to
Drug Eluting Stents Dedicated to Arterial Bifurcations .............. 401
L. Cattaneo, C. Chiastra, E. Cutrì, F. Migliavacca, S. Morlacchi,
and P. Zunino

Coupling $H\text{div}$ an $H1$ Finite Element Approximations for a
Poisson Problem ............................................................... 411
D. de Siqueira, P.R.B. Devloo, and S.M. Gomes
Nodal Interpolation Between First-Order Finite Element Spaces in 1D is Uniformly H¹-Stable ........................................... 419
T. Dickopf

M-Adaptation Method for Acoustic Wave Equation on Rectangular Meshes ............................................................. 429
V. Gyrya and K. Lipnikov

Applications of Nonvariational Finite Element Methods to Monge–Ampère Type Equations ............................................... 441
T. Pryer

Geodesic Finite Elements in Spaces of Zero Curvature ...................... 449
O. Sander

Design and Verification of the MPFA Scheme for Three-Dimensional Phase Field Model of Dendritic Crystal Growth ............................................................. 459
P. Strachota and M. Beneš

An Evolving Surface Finite Element Method for the Numerical Solution of Diffusion Induced Grain Boundary Motion .............................................. 469
V. Styles

Part VII Fluid Mechanics

Numerical Modeling of Stably Stratified Fluid Flow ......................... 481
L. Beneš, T. Bodnár, and J. Fürst

Numerical Simulation of a Rising Bubble in Viscoelastic Fluids .......... 489
H. Damanik, A. Ouazzi, and S. Turek

A Reduced Model for Flow and Transport in Fractured Porous Media with Non-matching Grids ...................... 499
A. Fumagalli and A. Scotti

Higher Order Galerkin Time Discretization for Nonstationary Incompressible Flow ............................................................. 509
S. Hussain, F. Schieweck, and S. Turek

On the Density-Enthalpy Method for the 2D Darcy Flow ................. 519
D. Ibrahim, F.J. Vermolen, and C. Vuik

Numerical Study of Effect of Stress Tensor for Viscous and Viscoelastic Fluids Flow ............................................................. 529
R. Keslerová

Numerical Simulations of Turbulent 3D Flow in Channel Junction ...... 539
P. Louda, K. Kozel, J. Průhoda, and L. Beneš
Weak Formulation of the Problem of Modelling the Steady Flow of a Viscous Incompressible Liquid Through a Rotating Radial Blade Machine ........................................................... 549
T. Neustupa

Combined Mixed-Hybrid Finite Element–Finite Volume Scheme for Computation of Multicomponent Compressible Flow in Porous Media……………………………………………………… 559
O. Polívka and J. Mikyška

Numerical Comparison of Unsteady Channel Compressible Flow with Low Inlet Mach Numbers…………………………………………………………………………………… 569
P. Pořízková, K. Kozel, and J. Horáček

Numerical Simulation of Generalized Newtonian and Oldroyd-B Fluids ……………………………………………………………………………………………………………………………… 579
V. Prokop and K. Kozel

Layer-Adapted Meshes Versus Weak Dirichlet Conditions in Low-Turbulent Flow Simulation …………………………………………………………………………………………… 587
L. Röhe and G. Lube

On Higher-Order Space-Time Discretization of an Nonlinear Aeroelastic Problem with the Consideration of Large Displacements ..... 597
P. Sváček

On the Construction of Analytic Solutions to a Visco–Elasticity Model for Soft Tissues ……………………………………………………………………………………………………………… 607
F.J. Vermolen

Extending the Volume of Fluid Method to Higher Order Accuracy ……… 617
J.C.G. Verschaeve

Stability Estimates and Numerical Comparison of Second Order Time-Stepping Schemes for Fluid-Structure Interactions ………… 625
T. Wick

Various Flow Equations to Model the New Soil Improvement Method Biogrout ………………………………………………………………………………………………………………………… 633
W.K. van Wijngaarden, F.J. Vermolen, G.A.M. van Meurs, and C. Vuik

Part VIII High Performance Computing

A Fast GPU-Accelerated Mixed-Precision Strategy for Fully Nonlinear Water Wave Computations …………………………………………………………………………………………… 645
S.L. Glimberg, A.P. Engsig-Karup, and M.G. Madsen

3D Helmholtz Krylov Solver Preconditioned by a Shifted Laplace Multigrid Method on Multi-GPUs …………………………………………………………………………………………… 653
H. Knibbe, C.W. Oosterlee, and C. Vuik
CUDA-Based Parallel Preconditioning for RANS Simulations of Indoor Airflow ................................................................. 663
S.C. Kramer, C. Pfaffenbach, and G. Lube

Shallow Water Simulation on GPUs for Sparse Domains ............... 673
M.L. Sætra

Parallel Implementation of Multilevel BDDC................................. 681
J. Šístek, J. Mandel, B. Sousedík, and P. Burda

Part IX  Multiscale Modeling and Simulations

Forecasting Production in an Oil Reservoir Simulation and Its Challenges................................................................. 693
V. Ginting, F. Pereira, and A. Rahunanthan

Numerical Analysis for an Upscaled Model for Dissolution and Precipitation in Porous Media ................................. 703
K. Kumar, I.S. Pop, and F.A. Radu

A Variational Multiscale Method for Poisson’s Equation in Mixed Form................................................................. 713
M.G. Larson, A. Målqvist, and R. Söderlund

Adaptive Geometrical Multiscale Modeling for Hydrodynamic Problems ................................................................. 723
L. Mauri, S. Perotto, and A. Veneziani

Part X  Preconditioners and Solvers

On the Superlinear Convergence of MINRES ................................. 733
V. Simoncini and D.B. Szyld

Fluid-Structure Interaction: Acceleration of Strong Coupling by Preconditioning of the Fixed-Point Iteration ............................ 741
M.R. Dörfel and B. Simeon

Some Experiences with Multilevel Krylov Methods ....................... 751
Y.A. Erlangga

Preconditioning of Elasticity Problems with Discontinuous Material Parameters ................................................................. 761
I. Georgiev and J. Kraus

A Robust Preconditioner for Distributed Optimal Control for Stokes Flow with Control Constraints ............................. 771
M. Kollmann and W. Zulehner
Computing Inner Eigenvalues of Matrices in Tensor Train Matrix Format
.................................................................................. 781
T. Mach

Part XI  Uncertainty, Stochastic Modelling, and Applications

Two Mathematical Tools to Analyze Metastable Stochastic Processes ..... 791
T. Lelièvre

On the Reliability of Error Indication Methods for Problems with Uncertain Data .................................................. 811
I. Anjam, O. Mali, P. Neittaanmäki, and S. Repin

A Reduced Basis Method for the Simulation of American Options ....... 821
B. Haasdonk, J. Salomon, and B. Wohlmuth

SAVU: A Statistical Approach for Uncertain Data in Dynamics of Axially Moving Materials ........................................ 831
J. Jeronen

On Singularity of Fisher Information Matrix for Stochastic Processes Under High Frequency Sampling ....................... 841
R. Kawai

Hierarchical Model Reduction: Three Different Approaches ............ 851
S. Perotto and A. Zilio
Numerical Mathematics and Advanced Applications
2011
Proceedings of ENUMATH 2011, the 9th European Conference on Numerical Mathematics and Advanced Applications, Leicester, September 2011
Cangiani, A.; Davidchack, R.L.; Georgoulis, E.H.; Gorban, A.N.; Levesley, J.; Tretyakov, M.V. (Eds.)
