

Contents

1	Piecewise Polynomial Approximation in 1D	1
1.1	Piecewise Polynomial Spaces	1
1.1.1	The Space of Linear Polynomials	1
1.1.2	The Space of Continuous Piecewise Linear Polynomials	2
1.2	Interpolation	4
1.2.1	Linear Interpolation	4
1.2.2	Continuous Piecewise Linear Interpolation	7
1.3	L^2 -Projection	8
1.3.1	Definition	8
1.3.2	Derivation of a Linear System of Equations	10
1.3.3	Basic Algorithm to Compute the L^2 -Projection	11
1.3.4	A Priori Error Estimate	11
1.4	Quadrature	13
1.4.1	The Mid-Point Rule	13
1.4.2	The Trapezoidal Rule	13
1.4.3	Simpson's Formula	14
1.5	Computer Implementation	15
1.5.1	Assembly of the Mass Matrix	15
1.5.2	Assembly of the Load Vector	18
1.6	Problems	20
2	The Finite Element Method in 1D	23
2.1	The Finite Element Method for a Model Problem	23
2.1.1	A Two-point Boundary Value Problem	23
2.1.2	Variational Formulation	24
2.1.3	Finite Element Approximation	24
2.1.4	Derivation of a Linear System of Equations	25
2.1.5	Basic Algorithm to Compute the Finite Element Solution	26
2.1.6	A Priori Error Estimate	27

2.2	Mathematical Modeling	28
2.2.1	Derivation of the Stationary Heat Equation	29
2.2.2	Boundary Conditions for the Heat Equation	29
2.2.2.1	Dirichlet Boundary Conditions	30
2.2.2.2	Neumann Boundary Conditions	30
2.2.2.3	Robin Conditions	30
2.2.3	Derivation of a Differential Equation for the Deformation of a Bar	30
2.2.4	Boundary Conditions for the Bar	31
2.2.4.1	Dirichlet Boundary Conditions	31
2.2.4.2	Neumann Boundary Conditions	31
2.2.4.3	Robin Boundary Conditions	31
2.3	A Model Problem with Variable Coefficients	32
2.3.1	Variational Formulation	32
2.3.2	Finite Element Approximation	33
2.4	Computer Implementation	33
2.4.1	Assembly of the Stiffness Matrix and Load Vector	33
2.4.2	A Finite Element Solver for a General Two-Point Boundary Value Problem	37
2.5	Adaptive Finite Element Methods	38
2.5.1	A Posteriori Error Estimate	38
2.5.2	Adaptive Mesh Refinement	40
2.6	Further Reading	42
2.7	Problems	42
3	Piecewise Polynomial Approximation in 2D	45
3.1	Meshes	45
3.1.1	Triangulations	45
3.1.2	Data Structures for a Triangulation	46
3.1.3	Mesh Generation	47
3.2	Piecewise Polynomial Spaces	49
3.2.1	The Space of Linear Polynomials	49
3.2.2	The Space of Continuous Piecewise Linear Polynomials	50
3.2.3	The Space of Piecewise Constants	52
3.3	Interpolation	53
3.3.1	Linear Interpolation	53
3.3.2	Continuous Piecewise Linear Interpolation	55
3.4	L^2 -Projection	56
3.4.1	Definition	56
3.4.2	Derivation of a Linear System of Equations	56
3.4.3	Basic Algorithm to Compute the L^2 -Projection	57
3.4.4	Existence and Uniqueness of the L^2 -Projection	57
3.4.5	A Priori Error Estimate	58
3.5	Quadrature and Numerical Integration	59

- 3.6 Computer Implementation 60
 - 3.6.1 Assembly of the Mass Matrix 60
 - 3.6.2 Assembly of the Load Vector 64
 - 3.6.3 Properties of the Mass Matrix 66
- 3.7 Further Reading 67
- 3.8 Problems 68
- 4 The Finite Element Method in 2D 71**
 - 4.1 Green’s Formula 71
 - 4.2 The Finite Element Method for Poisson’s Equation 72
 - 4.2.1 Poisson’s Equation 72
 - 4.2.2 Variational Formulation 72
 - 4.2.3 Finite Element Approximation 73
 - 4.2.4 Derivation of a Linear System of Equations 73
 - 4.2.5 Basic Algorithm to Compute the Finite Element Solution 74
 - 4.3 Some Useful Inequalities 75
 - 4.4 Basic Analysis of the Finite Element Method 77
 - 4.4.1 Existence and Uniqueness of the Finite Element Solution 77
 - 4.4.2 A Priori Error Estimates 78
 - 4.4.3 Properties of the Stiffness Matrix 81
 - 4.5 A Model Problem with Variable Coefficients 83
 - 4.6 Computer Implementation 83
 - 4.6.1 Assembly of the Stiffness Matrix 84
 - 4.6.2 Assembling the Boundary Conditions 86
 - 4.6.3 A Finite Element Solver for Poisson’s Equation 88
 - 4.6.3.1 Potential Flow Over a Wing 88
 - 4.7 The Dirichlet Problem 91
 - 4.8 The Neumann Problem 93
 - 4.9 The Eigenvalue Problem 95
 - 4.10 Adaptive Finite Element Methods 97
 - 4.10.1 A Posteriori Error Estimate 97
 - 4.10.2 Adaptive Mesh Refinement 99
 - 4.10.2.1 Rivara Refinement 100
 - 4.10.2.2 Regular Refinement 101
 - 4.10.3 Adaptive Finite Elements Using MATLAB 102
 - 4.10.4 Duality Based a Posteriori Error Estimate 105
 - 4.11 Further Reading 109
 - 4.12 Problems 109
- 5 Time-Dependent Problems 113**
 - 5.1 Finite Difference Methods for Systems of ODE 113
 - 5.2 The Heat Equation 116
 - 5.2.1 Derivation of the Transient Heat Equation 116
 - 5.2.2 Model Problem 117

5.2.3	Variational Formulation	118
5.2.4	Spatial Discretization	118
5.2.5	Time Discretization	120
5.3	Stability Estimates	121
5.3.1	A Space Discrete Estimate	121
5.3.2	A Fully Discrete Estimate	122
5.4	A Priori Error Estimates	122
5.4.1	Ritz Projection.....	123
5.4.2	A Space Discrete Estimate	123
5.4.3	A Fully Discrete Estimate	124
5.5	Computer Implementation	126
5.5.1	Mass Lumping.....	127
5.6	Space-Time Finite Element Approximation	129
5.6.1	A Posteriori Error Estimate	131
5.7	The Wave Equation.....	134
5.7.1	Derivation of the Acoustic Wave Equation	134
5.7.2	Model Problem	135
5.7.3	Variational Formulation	136
5.7.4	Spatial Discretization	136
5.7.5	Time Discretization	137
5.7.6	Conservation of Energy	137
5.8	Computer Implementation	139
5.9	Further Reading	140
5.10	Problems	141
6	Solving Large Sparse Linear Systems	143
6.1	Linear Systems	143
6.2	Direct Methods	144
6.2.1	Triangular Systems, Backward and Forward Substitution	144
6.2.2	Fill-ins, Graphs, and Symbolic and Numeric Factorization	145
6.2.3	Matrix Reorderings.....	150
6.2.3.1	Minimum Degree	150
6.2.3.2	Nested Dissection	151
6.3	Iterative Methods	153
6.3.1	Basic Iterative Methods	153
6.3.2	The Jacobi Method	155
6.3.3	The Gauss-Seidel Method	155
6.3.4	Convergence Analysis	155
6.3.5	Projection Methods	157
6.3.6	One-Dimensional Projection Methods	158
6.3.7	Krylov Subspaces	159
6.3.8	The Conjugate Gradient Method	162
6.3.9	The Generalized Minimal Residual Method	165
6.3.10	Other Krylov Methods	166

- 6.4 Preconditioning 166
 - 6.4.1 Jacobi Preconditioning 167
 - 6.4.2 Polynomial Preconditioners 167
 - 6.4.3 Incomplete Factorizations 168
- 6.5 Towards Multigrid 169
 - 6.5.1 The Smoothing Property 169
 - 6.5.2 A Two-Grid Method 170
- 6.6 Further Reading 173
- 6.7 Problems 174
- 7 Abstract Finite Element Analysis 177**
 - 7.1 Function Spaces 177
 - 7.1.1 Normed and Inner Product Vector Spaces 177
 - 7.1.2 Banach and Hilbert Spaces 180
 - 7.1.3 L^p Spaces 181
 - 7.1.4 Weak Derivatives 181
 - 7.1.5 Sobolev Spaces 183
 - 7.1.6 Traces 185
 - 7.2 Interpolation of Functions in Hilbert Spaces 186
 - 7.2.1 The Clement Interpolant 186
 - 7.2.2 The Scott-Zhang Interpolant 187
 - 7.3 The Abstract Setting 188
 - 7.3.1 An Abstract Variational Problem 188
 - 7.3.2 The Riesz Representation Theorem 188
 - 7.3.3 An Equivalent Minimization Problem 189
 - 7.3.4 The Lax-Milgram Lemma 191
 - 7.3.5 Application to Elliptic Partial Differential Equations ... 192
 - 7.3.5.1 Poisson’s Equation 192
 - 7.3.5.2 The Diffusion-Reaction Equation 193
 - 7.3.5.3 Laplace Equation with Mixed
Boundary Conditions 194
 - 7.3.6 A General Linear Second Order Elliptic Problem 194
 - 7.4 Abstract Finite Element Approximation 196
 - 7.4.1 Abstract Finite Element Method 196
 - 7.4.2 The Stiffness Matrix and Load Vector 196
 - 7.4.3 Galerkin Orthogonality 197
 - 7.4.4 A Priori Error Estimates 197
 - 7.4.5 A Posteriori Error Estimates 198
 - 7.5 Further Reading 200
 - 7.6 Problems 200
- 8 The Finite Element 203**
 - 8.1 Different Types of Finite Elements 203
 - 8.1.1 Formal Definition of a Finite Element 203
 - 8.1.2 Shape Functions for the Linear Lagrange Triangle 205
 - 8.1.3 Shape Functions for the Quadratic Lagrange
Triangle 206

8.1.4	Higher Order Triangular Lagrange Elements	208
8.1.5	Shape Functions for the Bilinear Quadrilateral Element	208
8.1.6	Shape Functions for the Linear Lagrange Tetrahedron	209
8.1.7	Shape Functions for the Trilinear Brick Element	210
8.2	The Isoparametric Mapping	211
8.2.1	Numerical Quadrature Revisited	213
8.2.2	Renumbering the Mesh for Quadratic Nodes	215
8.2.3	Assembly of the Isoparametric Quadratic Stiffness Matrix	217
8.3	Some Exotic Finite Elements	217
8.3.1	The Morley Element	218
8.3.2	The Crouzeix-Raviart Element	218
8.3.3	The Lowest Order Raviart-Thomas Element	220
8.3.4	The Lowest Order Nédélec Element	221
8.4	Further Reading	222
8.5	Problems	222
9	Non-linear Problems	225
9.1	Piccard Iteration	225
9.2	Newton's Method	226
9.3	The Non-linear Poisson Equation	227
9.3.1	The Newton-Galerkin Method	228
9.3.2	Finite Element Approximation	229
9.3.3	Computer Implementation	230
9.3.4	Piccard Iteration as a Simplified Newton Method	232
9.4	The Bistable Equation	233
9.4.1	Weak Form	233
9.4.2	Space Discretization	233
9.4.3	Time Discretization	234
9.4.4	Piccard Iteration	234
9.4.5	Newton's Method	235
9.5	Numerical Approximations of the Jacobian	237
9.5.1	Difference Quotient Approximation	238
9.5.2	Broyden's Method	238
9.6	Further Reading	239
9.7	Problems	239
10	Transport Problems	241
10.1	The Transport Equation	241
10.1.1	Weak Form	242
10.1.2	Standard Galerkin Finite Element Approximation	242
10.1.3	Computer Implementation	243
10.1.4	The Need for Stabilization	244
10.1.5	Least-Squares Stabilization	246

10.1.6	GLS Finite Element Approximation	248
10.1.7	A Priori Error Estimate	249
10.1.8	Computer Implementation	251
10.1.8.1	Heat Transfer in a Fluid Flow	251
10.2	Further Reading	256
10.3	Problems	256
11	Solid Mechanics	257
11.1	Governing Equations	257
11.1.1	Cauchy’s Equilibrium Equation	257
11.1.2	Constitutive Equations and Hooke’s Law	258
11.1.3	Boundary Conditions	259
11.2	Linear Elastostatics	260
11.2.1	Weak Form	260
11.2.2	Existence and Uniqueness of the Solution	262
11.2.3	Finite Element Approximation	263
11.2.4	A Priori Error Estimate	264
11.2.5	Engineering Notation	265
11.2.6	Computer Implementation	267
11.2.6.1	Verifying the Energy Norm Convergence ...	272
11.2.7	A Posteriori Error Estimate	274
11.2.7.1	Adaptive Mesh Refinement on a Rotated L-Shaped Domain	277
11.3	Linear Thermoelasticity	277
11.4	Linear Elastodynamics	279
11.4.1	Modal Analysis	280
11.4.1.1	Eigenvalues and Eigenmodes of a Steel Bracket	280
11.4.2	Time Stepping	282
11.4.2.1	Rayleigh Damping	282
11.4.2.2	Newmark’s Method	283
11.5	Thin Plates	284
11.5.1	Governing Equations	284
11.5.1.1	Weak Form	285
11.5.1.2	The C^1 Continuity Requirement and the Morley Approximation	285
11.6	Further Reading	286
11.7	Problems	286
12	Fluid Mechanics	289
12.1	Governing Equations	289
12.1.1	Conservation of Mass	289
12.1.2	Momentum Balance	290
12.1.3	Incompressible Newtonian Fluids	291
12.1.4	Boundary- and Initial Conditions	292

12.2	The Stokes System	292
12.2.1	The Stationary Stokes System	292
12.2.2	Weak Form	293
12.2.3	Equivalent Optimization Problem	295
12.2.4	The Continuous Inf-Sup Condition	296
12.2.5	Finite Element Approximation	298
12.2.6	The Discrete Inf-Sup Condition	298
12.2.6.1	The Uzawa Algorithm	300
12.2.7	Three Inf-Sup Stable Finite Elements	301
12.2.7.1	The Taylor-Hood Element	301
12.2.7.2	The MINI Element	302
12.2.7.3	The Non-conforming $P^1 - P^0$ Element	302
12.2.8	Asserting the Inf-Sup Condition	303
12.2.8.1	Fortin's Trick	303
12.2.9	A Priori Error Estimate	305
12.2.10	Computer Implementation	307
12.2.10.1	The Lid-Driven Cavity	307
12.2.11	A Posteriori Error Estimate	312
12.2.12	Stabilized Finite Element Methods	314
12.2.12.1	Spurious Pressure Modes	314
12.2.12.2	Galerkin Least Squares Stabilization	314
12.2.12.3	Macroelement Techniques	316
12.3	The Navier-Stokes Equations	316
12.3.1	The Fractional Step Method	317
12.3.1.1	Time Discretization	317
12.3.1.2	Space Discretization	319
12.3.2	Computer Implementation	320
12.3.2.1	The DFG Benchmark	320
12.4	Further Reading	323
12.5	Problems	324
13	Electromagnetics	327
13.1	Governing Equations	327
13.1.1	Constitutive Equations	328
13.1.2	Gauss' Laws	328
13.1.3	Ampère's Law	329
13.1.4	Faraday's Law	330
13.1.5	Maxwell's Equations	330
13.1.6	Initial- and Boundary Conditions	331
13.2	The Electric and Magnetic Wave Equations	332
13.3	The Time Harmonic Assumption	333
13.4	Electro- and Magnetostatics	333
13.5	The Time Harmonic Electric Wave Equation	334
13.5.1	Boundary Conditions	334
13.5.2	Green's Formula Revisited	335
13.5.3	Weak Form	335

- 13.5.4 Finite Element Approximation 336
- 13.5.5 Computer Implementation 338
 - 13.5.5.1 Electromagnetic Scattering from
a Cylinder 340
- 13.6 The Magnetostatic Potential Equation 344
 - 13.6.1 Boundary Conditions 346
 - 13.6.2 Weak Form 346
 - 13.6.3 The Helmholtz Decomposition 347
 - 13.6.4 Existence and Uniqueness of the Solution 349
 - 13.6.5 Finite Element Approximation 350
 - 13.6.6 A Priori Error Estimate 351
 - 13.6.7 A Posteriori Error Estimate 352
- 13.7 Further Reading 354
- 13.8 Problems 354
- 14 Discontinuous Galerkin Methods 355**
 - 14.1 A First Order Problem 355
 - 14.1.1 Model Problem 355
 - 14.1.2 Discontinuous Finite Element Spaces 356
 - 14.1.3 The Discontinuous Galerkin Method 357
 - 14.1.4 Stability Estimates 358
 - 14.1.5 A Priori Error Estimates 361
 - 14.2 A Second Order Elliptic Problem 362
 - 14.2.1 Model Problem 362
 - 14.2.2 The Symmetric Interior Penalty Method 362
 - 14.2.3 Approximation Properties 363
 - 14.2.4 A Priori Error Estimates 364
 - 14.2.5 Non-symmetric Versions of the Method 366
 - 14.2.6 Computer Implementation 367
 - 14.3 The Transport Equation with Diffusion 370
 - 14.4 Further Reading 372
 - 14.5 Problems 372
- A Some Additional Matlab Code 373**
 - A.1 Tri2Edge.m 373
 - A.2 EdgeMidPoints.m 374
 - A.3 Tri2Tri.m 374
