Part I  General Aspects of Bioenergetics

1  Introduction ................................................................. 3
   1.1 Definition of the Term “Bioenergetics” and Some
       Milestones of its History ........................................... 3
   1.2 Bioenergetics in the System of Biological Sciences ........... 5
   1.3 Laws of Bioenergetics ................................................ 9
   1.4 Evolution of Bioenergetic Mechanisms ........................... 13
       1.4.1 Adenosine Triphosphate ................................. 14
       1.4.2 Hypothesis of Adenine-Based Photosynthesis .......... 15
       1.4.3 Reserve Energy Sources and Glycolysis ............... 19
       1.4.4 Proton Channels and H⁺-ATPase as Means
            to Prevent Glycolysis-Induced Acidification
            of the Cell ..................................................... 21
       1.4.5 Bacteriorhodopsin-Based Photosynthesis
            as the Primordial Mechanism of Visible
            Light Energy Transduction ................................. 22
       1.4.6 Chlorophyll-Based Photosynthesis ......................... 23
       1.4.7 Respiratory Mechanism of Energy Supply ............... 25
   References ........................................................................ 27

Part II  Generators of Proton Potential

2  Chlorophyll-Based Generators of Proton Potential ............ 31
   2.1 Light-Dependent Cyclic Redox Chain of Purple Bacteria .... 32
       2.1.1 Main Components of Redox Chain and Principle
            of Their Functioning ......................................... 33
       2.1.2 Reaction Center Complex ..................................... 36
       2.1.3 CoQH₂: Cytochrome c-Oxidoreductase .................. 49
