

Contents

1	Semi-quasihomogeneous Systems of Differential Equations	1
1.1	Formal Asymptotic Particular Solutions of Semi-quasihomogeneous Systems of Differential Equations.....	1
1.2	Problems of Convergence.....	13
1.3	Exponential Methods for Finding Nonexponential Solutions.....	24
1.4	Examples	41
1.5	Group Theoretical Interpretation	55
2	The Critical Case of Pure Imaginary Roots	77
2.1	Asymptotic Solutions of Autonomous Systems of Differential Equations in the Critical Case of m Pairs of Pure Imaginary and $n - 2m$ Zero Roots of the Characteristic Equation	77
2.2	Periodic and Quasiperiodic Systems	92
2.3	Hamiltonian Systems	108
3	Singular Problems	131
3.1	Asymptotic Solutions of Autonomous Systems of Differential Equations in the Critical Case of Zero Roots of the Characteristic Equation	131
3.2	Concerning Iterated Logarithms.....	143
3.3	Systems Implicit with Respect to Higher Derivatives and Kuznetsov's Theory	152
4	Inversion Problem for the Lagrange Theorem on the Stability of Equilibrium and Related Problems	169
4.1	On Energy Criteria for Stability	169
4.2	Regular Problems	189
4.3	Singular Problems.....	200

A Nonexponential Asymptotic Solutions of Systems of Functional-Differential Equations	215
B Arithmetic Properties of the Eigenvalues of the Kovalevsky Matrix and Conditions for the Nonintegrability of Semi-quasihomogeneous Systems of Ordinary Differential Equations	229
Literature	249
Index	259

Asymptotic Solutions of Strongly Nonlinear Systems of
Differential Equations

Kozlov, V.V.; Furta, S.D.

2013, XX, 264 p., Hardcover

ISBN: 978-3-642-33816-8
