Contents

Catalysis: Unlimited Frontiers – Our Early Personal Journey into the World of Palladium ................................................... 1
Barry M. Trost

Reinventing Amide Bond Formation ........................................ 13
Jeffrey W. Bode

Catalytic Transformations Involving the Activation of sp\(^2\) Carbon–Oxygen Bonds ....................................................... 35
Mamoru Tobisu and Naoto Chatani

The Interplay of Invention, Observation, and Discovery in the Development of Lewis Base Activation of Lewis Acids for Catalytic Enantioselective Synthesis ........................................... 55
Gregory L. Beutner and Scott E. Denmark

The Discovery and Development of a Palladium(II)-Catalyzed Oxidative Cross-Coupling of Two Unactivated Arenes ................. 91
David R. Stuart and Keith Fagnou

Decarboxylative Coupling Reactions ....................................... 121
Lukas J. Gooßen and Käthe Gooßen

Gold-Catalyzed Organic Reactions ......................................... 143
A. Stephen K. Hashmi

Developing Catalytic Asymmetric Acetalizations .......................... 165
Ilija Čorić, Sreekumar Vellalath, Steffen Müller, Xu Cheng, and Benjamin List
Designing Molecular Catalysts for Selective CH Functionalization ...... 195
Steven M. Bischof, Brian G. Hashiguchi, Michael M. Konnick, and Roy A. Periana

Carbene Catalysis: Beyond the Benzoin and Stetter Reactions .......... 233
Benoit Cardinal-David and Karl A. Scheidt

Asymmetric Autocatalysis of Pyrimidyl Alkanol ......................... 261
Kenso Soai and Tsuneomi Kawasaki

Natural Products as Inspiration for Reaction Development: Catalytic
Enantioselective Decarboxylative Reactions of Prochiral Enolate
Equivalents ................................................................. 281
Douglas C. Behenna and Brian M. Stoltz

Acid Catalysis in Organic Synthesis ..................................... 315
Hisashi Yamamoto

Index ................................................................................. 335
Inventing Reactions
Gooßen, L.J. (Ed.)
2013, XIV, 342 p., Hardcover
ISBN: 978-3-642-34285-1
