1	Introduction	1
1.1	Notation	10
	References	10
2	Feynman Integrals: Basic Definitions and Tools	11
2.1	Feynman Rules and Feynman Integrals	11
2.2	Divergences	14
2.3	Alpha Representation	19
2.4	Regularization	21
2.5	Properties of Dimensionally Regularized Feynman Integrals.	26
	References	30
3	Evaluating by Alpha and Feynman Parameters	33
3.1	Simple One- and Two-Loop Formulae	33
3.2	Auxiliary Tricks	37
3.2.1	Recursively One-Loop Feynman Integrals	37
3.2.2	Partial Fractions	38
3.2.3	Dealing with Numerators.	38
3.3	One-Loop Examples	41
3.4	Feynman Parameters	45
3.5	Two-Loop Examples	48
	Reference	58
4	Sector Decompositions	61
4.1	Hepp and Speer Sectors.	62
4.2	Recursive Sector Decompositions	68
4.3	Geometrical Sector Decompositions	72
4.4	Analysis of Convergence and a Definition of Dimensionally Regularized UV and IR Divergent Feynman Integrals.	75
	References	80

5	Evaluating by MB Representation	83
5.1	A One-Loop Example	84
5.2	Evaluating Multiple MB Integrals	89
5.3	How to Derive and Check MB Representations	90
5.4	Two Basic Strategies of Resolving Singularities in ϵ	100
5.5	Two-Loop Examples	102
5.6	Examples with the Old Strategy A	106
5.7	Applying MB Representation to Expand Feynman Integrals in Momenta and Masses	119
5.8	Combining MB Representation with Sector Decompositions to Expand Feynman Integrals	121
5.9	Conclusion	123
	References	124
6	IBP and Reduction to Master Integrals	127
6.1	Solving IBP Relations by Hand	128
6.2	General Setup for IBP Reduction	134
6.3	Laporta's Algorithm	136
6.4	Algebraic Structure of IBP Relations	138
6.5	Baikov's Method	140
6.6	Shifting Dimension and Gröbner Bases	148
6.7	Obtaining Additional Relations	151
6.8	Conclusion	153
	References	154
7	Evaluation by Differential Equations	157
7.1	One-Loop Examples	157
7.2	Two-Loop Example	163
7.3	Three-Loop Example	167
7.4	Conclusion	169
	References	171
8	Evaluating Master Integrals by Dimensional Recurrence and Analyticity	173
8.1	Dimensional Recurrence Relations	173
8.2	General Prescriptions	175
8.3	Multiloop Examples	179
8.4	Evaluating Multicomponent Master Integrals	193
8.5	What Numbers Can Appear in Epsilon Expansions?	200
	References	202
9	Asymptotic Expansions in Momenta and Masses	203
9.1	Expansion by Subgraphs	203
9.2	Expansion by Regions	208

9.3	Expansion by Regions in Parametric Representations	214
9.4	How to Reveal Relevant Regions	216
9.5	Revealing Potential Regions	219
9.6	Revealing Glauber Regions	221
9.7	Mathematical Status of Expansion by Regions	225
