1 Three-dimensional echocardiography: lessons in overcoming time and space
Jos R.T.C. Roelandt, Joseph Kisslo
1.1 Reconstruction techniques
1.1.1 The linear scanning approach
1.1.2 The fan-like scanning approach
1.1.3 The rotational scanning approach
1.2 Volumetric real-time (high-speed) scanning
1.3 High speed imaging
1.4 The future is based on the past
References

2 Basic principles and practical application
Thomas Buck, Karl E. Thiele
2.1 How real-time 3D ultrasound works
2.1.1 It's all about the transmit beams
2.1.2 The need for bigger, better, faster
2.1.3 Fully sampled matrix array transducers
2.1.4 Parallel receive beam processing
2.1.5 Three-dimensional color flow
2.1.6 Principle of depth volume rendering for 3D imaging
2.2 The probes
2.3 Live 3D echocardiographic examination
2.3.1 First steps and learning curve
2.3.2 Three-dimensional acquisition (modes and image settings)
2.3.3 Standard 3D views and image orientation
2.4 Basic 3D analysis: cropping and slicing
2.4.1 First steps of 3D dataset cropping
2.5 Basic 3D measurements
2.6 Artifacts
2.6.1 Stitching artifacts
2.6.2 Dropout artifacts
2.6.3 Blurring and blooming artifacts
2.6.4 Gain artifacts
References

3 Left ventricular and left atrial function
Harald P. Kuhl
3.1 Assessment of left ventricular volumes and ejection fraction
3.2 Evaluation of left ventricular mass
3.3 Assessment of regional left ventricular function
3.4 Determination of left ventricular dyssynchrony
3.5 Parametric imaging
3.6 Transesophageal real-time 3D echocardiography
3.7 Three-dimensional assessment of left atrial volume and function
