<b>1 Photon Interferences: History and Fundamental Aspects . . . . .</b>	<b>1</b>
1.1 The History of Light . . . . .	1
1.1.1 Before Newton . . . . .	1
1.1.2 Newton and Huygens: Two Opposite Approaches . . . . .	3
1.1.3 Young: The Discovery and Formulation of Interferences . . . . .	5
1.1.4 Michelson and Morley: A Genius and Decisive Experiment . . . . .	7
1.1.5 The Quanta Revolution and Corpuscular Vision . . . . .	8
1.1.6 Two Crucial Experiments . . . . .	9
1.2 Characteristics of Interferences . . . . .	11
1.2.1 Conditions for Interferences . . . . .	11
1.2.2 Coherence in Time and in Space . . . . .	13
1.2.3 Contrast and Visibility of Fringes . . . . .	13
References . . . . .	17
<b>2 Interferences with Massive Particles . . . . .</b>	<b>19</b>
2.1 The De Broglie Wave-Particle Duality . . . . .	19
2.1.1 The Concept of Wave-Particle Duality . . . . .	19
2.1.2 The First Evidence for Wave Behavior of Massive Particles . . . . .	20
2.2 Interferences with Massive Particles . . . . .	20
2.2.1 Interferences with Neutrons . . . . .	20
2.2.2 Interferences with Atoms . . . . .	23
2.2.3 Interferences with Small Molecules . . . . .	28
2.2.4 Interferences with Large Molecules and Clusters . . . . .	30
2.2.5 Interferences with Bose-Einstein Condensates . . . . .	32
References . . . . .	33

<b>3</b>	<b>Electron Interferences Using Macroscopic and Nanoscopic Interferometers</b> . . . . .	35
3.1	Electron Interferences with Macroscopic Interferometers . . . . .	35
3.1.1	Interferences Using an Electron Beam: The Young Experiment Revisited . . . . .	35
3.1.2	Feynman Thought Experiment . . . . .	36
3.1.3	Interferences Using an Attenuated Electron Beam . . . . .	37
3.2	Electron Interferences with Nanoscopic Interferometers . . . . .	41
3.2.1	Fundamental Interest of the Approach . . . . .	41
3.2.2	Processes in Atomic Collisions . . . . .	42
3.2.3	Approximations in the Collision and Post-collision Calculations . . . . .	45
3.3	The Role of Electrons in Ion Interferences . . . . .	46
3.3.1	Elastic Process in Asymmetric and Symmetric Collisions . . . . .	46
3.3.2	Resonant Electron Capture in Symmetric Collisions . . . . .	49
3.3.3	Electron Capture in Asymmetric Collisions . . . . .	53
3.4	Electron Emission in Atomic Collisions: Young 1801 . . . . .	57
3.4.1	Photoionization of Molecules . . . . .	57
3.4.2	Ionization of H <sub>2</sub> by Ion Impact . . . . .	64
3.4.3	Electron Capture . . . . .	83
3.4.4	Ionization of H <sub>2</sub> by Electron Impact . . . . .	85
3.5	Electron Emission in Atomic Collisions: Young 1804 . . . . .	91
3.5.1	Principle of the Experiment . . . . .	91
3.5.2	Interpretation of the Spectra . . . . .	92
3.6	Other Sources of Interferences . . . . .	94
3.6.1	Interferences Between Direct Ionization and Autoionization . . . . .	94
3.6.2	Interferences Between Auger Lines . . . . .	96
	References . . . . .	98
<b>4</b>	<b>Young-Type Electron Interferences Using Single Electron Sources</b> . . . . .	101
4.1	Principle of a Single-Electron Experiment . . . . .	101
4.1.1	Analogy with Photon Experiments . . . . .	101
4.1.2	An ideal Single-Electron Experiment . . . . .	101
4.1.3	Visibility of the Expected Fringes . . . . .	103
4.1.4	Limitations of the Contrast . . . . .	104
4.1.5	Coherence Time and Coherence Length . . . . .	106
4.2	Realization of the Experiment . . . . .	106
4.2.1	One and Two Event Probabilities . . . . .	106
4.2.2	The Experimental Setup . . . . .	108
4.2.3	Spectral Analysis for 30 keV He <sup>2+</sup> + H <sub>2</sub> Collisions . . . . .	109
4.2.4	Evolution of Oscillations with Interference Parameters . . . . .	112

4.3	The Origin of the Oscillations in Electron Interferences . . . . .	114
4.4	Analogy with the Photon Interference Experiment . . . . .	117
4.4.1	Relevance of the Analogy . . . . .	117
4.4.2	The Young Double-Slit Experiment with Photons Revisited . . . . .	118
4.4.3	Electron Interferences Revisited . . . . .	120
4.5	Summary . . . . .	122
	References . . . . .	124
<b>5</b>	<b>A Theoretical Description of Young-Type Interferences Following Auger Electron Emission . . . . .</b>	<b>125</b>
5.1	Quantum Mechanical Description . . . . .	125
5.1.1	Collision Diagrams . . . . .	125
5.1.2	Basic Quantum Mechanics Formalism . . . . .	126
5.1.3	Application to Ion-Atom Collisions . . . . .	128
5.1.4	Application to Ion-Molecule Collisions . . . . .	137
5.2	A Semi-classical View of Interferences . . . . .	140
5.2.1	Introduction . . . . .	140
5.2.2	Basis of the Model . . . . .	143
5.2.3	Preliminary Results: Angular Distribution . . . . .	148
	References . . . . .	150
	<b>Appendix 1: System of Atomic Units . . . . .</b>	<b>151</b>
	<b>Appendix 2: Scattering Cross Section . . . . .</b>	<b>155</b>
	<b>Appendix 3: Interference Term in H<sub>2</sub> Ionization . . . . .</b>	<b>157</b>
	<b>Appendix 4: Post Collision Interaction in Atomic Collisions . . . . .</b>	<b>163</b>
	<b>Appendix 5: Path Interference Model . . . . .</b>	<b>171</b>
	<b>Appendix 6: Oscillations in the Width and Wavelength Distribution in Photon Interference Experiments . . . . .</b>	<b>177</b>
	<b>Appendix 7: Oscillations at Maximum of Electron Energy Distribution . . . . .</b>	<b>183</b>
	<b>Appendix 8: Fast Fourier Transform . . . . .</b>	<b>191</b>
	<b>Appendix 9: Recoil Ion Momentum and Capture Process . . . . .</b>	<b>199</b>
	<b>Appendix 10: Gamma and Hypergeometric Functions . . . . .</b>	<b>203</b>
	<b>Appendix 11: Visibility of Interference Pattern . . . . .</b>	<b>207</b>
	<b>Conclusion and Perspectives . . . . .</b>	<b>211</b>
	<b>Index . . . . .</b>	<b>221</b>
