Contents

1  Introduction to Cavity Enhanced Absorption Spectroscopy       1
   Daniele Romanini, Irène Ventrillard, Guillaume Méjean, Jérôme
   Morville, and Erik Kerstel
   1.1 Introduction .................................................. 1
   1.1.1 A Short History of Cavity Enhanced Methods ............ 3
   1.1.2 A Review of Reviews on CEAS Developments and
          Applications ............................................. 13
   1.2 The High Finesse Optical Resonator .......................... 15
       1.2.1 Intensity Transmitted by a Cavity: A Simplified
              One-Dimensional Model .............................. 15
       1.2.2 The Real World of Transverse Modes ................. 23
   1.3 Detection Limit, Noise, Fringes, and More .................. 26
   1.4 Coupling of Light into a High Finesse Optical Cavity ....... 30
       1.4.1 Single Mode Injection: From the Ideal Monochromatic
              Laser to the Realistic Noisy Laser ................. 30
       1.4.2 Multi-mode Injection (Longitudinal and Transverse):
              Incoherent Pulsed Lasers ............................ 38
       1.4.3 Multi-mode Injection (Longitudinal): Coherent Pulsed
              Lasers, or Frequency Combs .......................... 42
   1.5 Conclusion .................................................... 51
   References ....................................................... 51

2  Detection and Characterization of Reactive Chemical
    Intermediates Using Cavity Ringdown Spectroscopy .......... 61
   Neal Kline and Terry A. Miller
   2.1 Introduction .................................................... 61
   2.2 The Chemistry and Spectroscopy of Peroxy Radicals ......... 63
   2.3 CRDS Spectrometers and Results .............................. 65
       2.3.1 Room Temperature, Moderate Resolution CRDS of Ethyl
              Peroxy ................................................ 66
       2.3.2 Jet-Cooled, High Resolution CRDS of Ethyl Peroxy .... 71
4.5 Ultra High-Sensitivity SCAR Molecular Spectroscopy:
  Application to Detection of Very Rare Species ............ 157
References ..................................................... 160
5 Cavity Enhanced Absorption Spectroscopy with Optical Feedback 163
  Jérôme Morville, Daniele Romanini, and Erik Kerstel
  5.1 Introduction ............................................ 163
  5.2 An Intuitive Picture of the Technique ................... 164
  5.3 Theoretical Foundations of OF-CEAS .................... 170
    5.3.1 Optical Feedback: Model Equations .................. 170
    5.3.2 The Locked Frequency Behavior and the Resulting
      Cavity Transmission Pattern .......................... 174
    5.3.3 Optical Feedback Phase and the Cavity Transmission
      Beating Patterns ......................................... 176
    5.3.4 The OF-CEAS Operating Conditions .................. 178
    5.3.5 Locked-Laser Linewidth and Optical Feedback Phase
      Tolerance .................................................. 179
    5.3.6 The High Frequency Scanning Speed of OF-CEAS ....... 180
  5.4 Implementation ......................................... 183
    5.4.1 Different Laser Sources for OF-CEAS ................. 183
    5.4.2 OF-CEAS Schemes ...................................... 185
  5.5 Absorption Scale Calibration by a Single Ring-Down ....... 189
  5.6 Typical Performance of OF-CEAS ........................ 194
  5.7 Precursory Works on OF-Locking of a Semiconductor Laser
    to an Optical Cavity ......................................... 199
    5.7.1 Laser Stabilization .................................... 199
    5.7.2 Optical-Feedback Cavity Ring-Down Spectroscopy ..... 200
  5.8 Applications ............................................ 202
    5.8.1 Trace Gas Detection .................................... 202
    5.8.2 Isotope Ratio Analyses ................................ 204
    5.8.3 Aerosol Studies ....................................... 205
    5.8.4 Other Applications .................................... 205
  5.9 Conclusions ............................................. 205
References ..................................................... 207
6 NICE-OHMS—Frequency Modulation Cavity-Enhanced
  Spectroscopy—Principles and Performance .................... 211
  Ove Axner, Patrick Ehlers, Aleksandra Foltynowicz, Isak Silander, and
  Junyang Wang
  6.1 Introduction ............................................ 211
  6.2 Theory—NICE-OHMS Analytical Signals .................... 213
    6.2.1 Frequency Modulation Spectroscopy .................... 213
    6.2.2 Doppler-Broadened NICE-OHMS ....................... 214
    6.2.3 Sub-Doppler NICE-OHMS .............................. 225
  6.3 Experimental Implementation ............................ 230
    6.3.1 Generic Setup ......................................... 230
6.3.2 Fiber-Laser-Based NICE-OHMS ............................ 233

6.4 Performance ............................................. 236

6.4.1 Concentration, Pressure, and Power Dependence of the Analytical Signal .................................. 236

6.4.2 Noise and Background Signals ............................. 238

6.4.3 Detection Sensitivity ........................................ 244

6.5 Summary, Conclusions, and Future Outlook ................ 246

References ..................................................... 248

7 Applications of NICE-OHMS to Molecular Spectroscopy .... 253
Brian M. Siller and Benjamin J. McCall

7.1 Introduction .................................................. 253

7.2 Laser Systems ................................................. 255

7.2.1 Near-Infrared .............................................. 255

7.2.2 Mid-Infrared ............................................... 259

7.3 Molecules .................................................... 261

7.3.1 Stable Neutral Molecules .................................. 262

7.3.2 Radicals and Ions ......................................... 265

7.4 Future Prospects ............................................. 269

References ..................................................... 269

8 Cavity-Enhanced Direct Frequency Comb Spectroscopy .... 271
P. Masłowski, K.C. Cossel, A. Foltynowicz, and J. Ye

8.1 Introduction .................................................. 271

8.2 Frequency Comb Sources ...................................... 274

8.2.1 Mode-Locked Lasers ...................................... 275

8.2.2 Indirect Sources ......................................... 277

8.2.3 Other Types of OFC Sources ............................... 278

8.2.4 Typical Comb Sources ................................... 279

8.3 Comb-Cavity Coupling ........................................ 282

8.3.1 Comb-Cavity Coupling—Tight Locking Scheme ......... 284

8.3.2 Comb-Cavity Coupling—Swept Coupling Scheme ....... 287

8.3.3 Effect of Comb-Cavity Resonance Mismatch on the Observed Line Shape .................................. 289

8.4 Detection Methods ............................................ 290

8.4.1 Broadband Cavity Ringdown Spectroscopy .............. 293

8.4.2 VIPA Spectrometer ....................................... 295

8.4.3 Fourier-Transform Spectroscopy .......................... 296

8.4.4 Sensitivity of CE-DFCS Detection Methods ........... 299

8.5 Applications .................................................. 300

8.5.1 Breath Analysis ............................................ 300

8.5.2 Trace Water in Arsine Vapor .............................. 302

8.5.3 Trace Detection of Hydrogen Peroxide .................. 303

8.5.4 Comb-Mode Resolved Spectroscopy ...................... 308

8.6 Summary ..................................................... 312

References ..................................................... 312
