Contents

1 Overview Greenland Sea .......................................................... 1
   1.1 Current ........................................................................... 1
   1.2 The MI Effect ................................................................. 2
   1.3 The Arctic Amplification and NAO ................................. 3
   1.4 Sea-Ice Ecosystem ........................................................... 3
   References ............................................................................. 5

2 Chlorophyll a, Ice Cover, and North Atlantic Oscillation .......... 7
   2.1 Introduction ..................................................................... 8
      2.1.1 Sea Ice and the Phytoplankton Biomass .................... 8
      2.1.2 The Light Effect on Phytoplankton Biomass .............. 8
   2.2 Data and Methods ......................................................... 9
   2.3 Results ............................................................................ 10
      2.3.1 CHL Distributions .................................................... 10
      2.3.2 The Reason of the High CHL Peaks in Northern Region . 13
      2.3.3 Ice Cover Distributions ............................................ 15
      2.3.4 SST, PAR, ICE, and Wind in the 75°N–80°N Region .... 18
      2.3.5 The Correlation and Regression Analysis Between
            CHL and ICE ............................................................ 21
      2.3.6 The Correlation Analysis Between NAO and CHL ...... 25
      2.3.7 Correlations of MI and NAO ..................................... 27
      2.3.8 The Correlation Analysis Among CHL, MI, and NAO ... 28
   2.4 Conclusions ................................................................. 30
   References ............................................................................. 30

3 Aerosol Optical Depth, Ice Cover, and Cloud Cover .............. 33
   3.1 Introduction ..................................................................... 33
      3.1.1 Aerosol and Cloud .................................................... 33
      3.1.2 Sea Ice, AOD, Cloudiness, and Radiative Balance ....... 34
   3.2 Results ............................................................................ 36
      3.2.1 The AOD Distributions ............................................. 36
### 3.2.2 Cloud Cover (CLD) Distributions

3.2.3 The Correlation Analysis Among AOD, ICE, and CLD

3.3 Conclusions

References

---

### 4 Photosynthetically Active Radiation, Ice Cover, and Sea Surface Temperature

4.1 Introduction

4.2 Results

4.2.1 The Distributions of PAR

4.2.2 Mixed Layer Depth (MLD) Distributions

4.2.3 The Correlation Analysis for PAR and ICE

4.2.4 Regression and Lag Analysis for PAR and ICE

4.2.5 The Regression and Lag Analysis for PAR and SST

4.3 Conclusions

References

---

### 5 The Correlation Analysis and Predictions for Chlorophyll a, Aerosol Optical Depth, and Photosynthetically Active Radiation

5.1 Introduction

5.2 The Correlation Analysis for CHL, AOD, and PAR

5.2.1 The Correlation Analysis Between CHL and AOD

5.2.2 Correlation Between CHL and Cloud Cover (CLD)

5.2.3 Correlations Between CHL and PAR

5.2.4 The Correlation Analysis Between AOD and PAR

5.2.5 The Correlation Analysis Among CHL, PAR, and AOD

5.3 The Predictions

5.3.1 The Prediction of CHL

5.3.2 The Prediction of AOD

5.3.3 The Prediction of PAR

5.4 Conclusions

References

---

### 6 Conclusions and Discussions

6.1 Conclusions

6.2 Discussions

6.2.1 The Role of Sea Ice

6.2.2 More About Arctic Amplification

6.2.3 Accuracy of the Satellite Data

6.2.4 Global Warming or Cooling?

6.2.5 Further Research
