## Contents

1 Introduction ................................................ 1
   1.1 First and Second Principles of Thermodynamics .......... 1
      1.1.1 Ideal (Perfect) Gas Laws .......................... 2
      1.1.2 Ideal Gas State Equation .......................... 4
      1.1.3 Mixtures ........................................... 4
      1.1.4 Specific Heat ....................................... 5
      1.1.5 First Principle of Thermodynamics (Robert Mayer 1842) 6
      1.1.6 Second Principle of Thermodynamics (Sadi Carnot 1824) 12
      1.2.1 Heat Exergy ....................................... 24
      1.2.2 Exergy of Closed Systems ........................... 27
      1.2.3 Exergy of Open Systems. Relationship Between Exergy Dissipation and Entropy Creation ........................... 29
      1.2.4 Non-equilibrium Linear Phenomenological Connection Between Generalized Forces and Currents ........................... 33
   1.3 Equilibrium of Thermodynamic Systems and Phase Transformations ......................................... 34
      1.3.1 Thermodynamic Stability and Equilibrium .............. 35
      1.3.2 Equilibrium Conditions of a Homogeneous Isolated System. TPT Equilibrium Point and Static Equilibrium ........................... 38
      1.3.3 Phase Equilibrium Conditions of Monocomponent and Binary Systems. TPT Ideal Point and Dynamic Equilibrium. ........................................... 40
      1.3.4 Phase Transformations. Gibbs Rule of Phases ........... 43
      1.3.5 Clapeyron–Clausius Equation ........................ 45
   1.4 Absorption Heat Pumping Selected Topic ................. 46
      1.4.1 Absorption Cycle Introduction ........................ 46
      1.4.2 Basic Absorption Cycles ................................ 49
      1.4.3 Ideal Cycles ......................................... 49
      1.4.4 Selected Topic of Solutions Thermodynamics ............ 53
      1.4.5 Condensation and Evaporation of Binary Mixtures ........................... 54
1.4.6 Dissolution (Mixing) Heat of Binary Mixtures ............. 57
1.4.7 Absorption Cycle Charts .................................. 63
1.4.8 Working Fluid-Absorbent Mixtures Model ................ 69
References ................................................................ 80

2 Mass and Heat Exchange Analysis of the Absorption Processes:
The Divided Device Method ............................................. 83
2.1 Heat Exchange Analysis of Isobar Absorption Processes
with Gliding Temperature ............................................. 83
2.2 The Divided Device Method for Isobar Absorption Processes
Heat Exchange Assessment ............................................ 88
References ................................................................ 92

3 Coabsorbent Cycles .................................................... 93
3.1 Introduction .......................................................... 93
3.2 Nontruncated Heating and Cooling Coabsorbent Cycles ....... 93
  3.2.1 Nontruncated Cooling Coabsorbent Cycle ............... 94
  3.2.2 Nontruncated Heating (Heat Transformer) Coabsorbent
        Cycle ...................................................... 127
  3.2.3 Cycle Change of Place ....................................... 130
  3.2.4 Nontruncated Coabsorbent-Condensing Cycle ........... 131
  3.2.5 Non-isobar Nontruncated Coabsorbent Cycles ........... 134
References ................................................................ 168

4 A Few New Coabsorbent Cycle Configurations: The Internal
Composition and the Coabsorbent Cycle Truncation ............. 171
4.1 Balance (Fractal) Truncation of the Coabsorbent Cycle ....... 175
  4.1.1 Cooling Cycle .............................................. 176
  4.1.2 Heating Cycle .............................................. 178
  4.1.3 Truncation Theory .......................................... 179
  4.1.4 Truncation Columns, Common-Column Cycles,
        Column Cycles, Reverse Truncated Cycles and Fractals
        Symbolic Representation .................................. 187
  4.2 Model of Cooling and Heating Truncated Cycles .......... 192
    4.2.1 Gax Use in “Acr” Provided Truncated Coabsorbent Cycles . 195
    4.2.2 Model Results of Cooling Truncated Coabsorbent Cycles .220
    4.2.3 Model Results of Heating Truncated Coabsorbent Cycles .227
    4.2.4 Auxiliary Mechanical Work Consumption in Truncated
        Cycles .................................................... 232
  4.3 Hybrid Truncation of the Coabsorbent Cycle ............... 234
    4.3.1 Hybrid Simple Truncated Cooling Cycles ............... 238
    4.3.2 Hybrid Simple Truncated Heating Cycles ............... 240
References ................................................................ 247
5 Effectiveness of Coabsorbent Cycles and Cascades According to First and Second Principles of Thermodynamics

5.1 Cooling Fractal (Nontruncated Cycle) COP
5.2 Heating Fractal (Nontruncated Cycle) COP
5.3 Truncated Cooling Fractal COP
5.4 Truncated Heating Fractal COP
5.5 Hybrid Cooling Fractal COP
5.6 Hybrid Heating Fractal COP
5.7 COP of Hybrid Cooling and Heating Fractals Cascades
  5.7.1 Deep Cooling Cascade Study Case
  5.7.2 Cold Region Heating Cascade Study Case

## 8 A Thermodynamic Approach of Mechanical Vapor Compression Refrigeration and Heating COP Increase

8.1 Introduction ............................................ 327

8.2 Methods of Increasing the Refrigeration Effectiveness and Their Ideal Thermodynamic Limits .................................. 329

8.2.1 TWRC Method .................................... 329

8.2.2 TTRC Method .................................... 338

8.3 Refrigeration Cycles Provided with TWRC .................... 340

8.3.1 TWRC (SSRC, CWF) .............................. 340

8.3.2 TWRC (SSRC, CWF, CSTSGS) ...................... 342

8.3.3 TWRC (SSRC) .................................... 342

8.3.4 TWRC (TSRC, CWF, CSTSGS) ...................... 343

8.3.5 TWRC (THSRC, CWF, CSTSGS) and TWRC (MSRC, CWF, CSTSGS) .......................................................... 345

8.3.6 Air Liquefaction and Separation Cycles Provided with TWRC .......................................................... 346

8.4 Results of Refrigeration Cycles Provided with TWRC ........... 347

8.4.1 TWRC (SSRC, CWF), TWRC (SSRC, CWF, CSTSGS) ... 349

8.4.2 TWRC (SSRC) .................................... 350

8.4.3 TWRC (TSRC, CWF, CSTSGS) ...................... 351

8.4.4 TWRC (THSRC, CWF, CSTSGS) ..................... 352

8.5 Further Results Concerning TWRC Feasibility ................. 352

8.6 Refrigeration Cycles Provided with TTRC .................... 360

8.7 TWRC and TTRC Heat Pumping Theory and Recent Results ..... 361

8.7.1 TWRC and TTRC Heat Pumping Theory ............... 361

8.7.2 TWRC and TTRC Heat Pumping Recent Results ......... 370
