Contents

1 Future Trends of Virtual, Augmented Reality, and Games for Health ................................................ 1
   Minhua Ma, Lakhmi C. Jain and Paul Anderson
   1.1 Introduction ............................................. 1
   1.2 Chapters Included in the Book ........................... 2
   1.3 Future Trends of VR, AR, and Games for Health ............ 5
       1.3.1 Location-Based Excergaming ................... 5
       1.3.2 Mobile Apps ...................................... 5
       1.3.3 Social Media Gaming for Public Health ........... 5
   References ................................................. 6

Part I Applications in Healthcare Education

2 Healthcare Training Enhancement Through Virtual Reality and Serious Games ......................................... 9
   Sandrine de Ribaupierre, Bill Kapralos, Faizal Haji, Eleni Stroulia, Adam Dubrowski and Roy Eagleson
   2.1 Introduction: Games and Simulation in Medical Education .... 10
   2.2 Does Video Game Proficiency Correlate with Surgical Skill? ... 17
   2.3 Serious Games for Patient Education ........................ 17
   2.4 Games and Play: Structured Learning Versus Entertainment ... 18
   2.5 Hierarchical Task Analysis for Game Scenario Design .......... 21
   2.6 Knowledge Level, Procedural Levels, and Basic Skills Level ... 22
   2.7 Conclusions ............................................. 23
   References ................................................. 24

3 A Haptic-Based Virtual Reality Head and Neck Model for Dental Education ........................................... 29
   Paul Anderson, Minhua Ma and Matthieu Poyade
   3.1 Introduction ............................................. 30
   3.2 Haptics in Dental Training ................................ 32
   3.3 Development of Head and Neck Anatomy .................. 34
       3.3.1 Data Construction ............................. 36
       3.3.2 Data Acquisition .............................. 37

References .................................................
3.3.3 The Complete Dataset of Head and Neck ................ 41
3.3.4 Interactive Application .............................. 42
3.3.5 Verification ........................................ 43
3.4 Haptic Injection in the Head and Neck Model ............... 45
3.5 Conclusion and Future Work ............................. 47
References .................................................. 48

4 In Virtuo Molecular Analysis Systems: Survey and New Trends .... 51
Guillaume Bouyer, Samir Otmame and Mouna Essabbah
4.1 Introduction .............................................. 51
4.2 From In Silico to In Virtuo Analysis in Molecular Biology .... 53
  4.2.1 3D Modeling ...................................... 54
  4.2.2 Visualization ....................................... 58
  4.2.3 3D User Interaction ................................ 60
4.3 Discussion ............................................... 69
  4.3.1 Classification According to Visual Immersion and Multimodal Rendering ...................... 69
  4.3.2 Contribution of VR Techniques for Molecular Biology ............................................... 71
  4.3.3 Towards a Hybrid Approach .......................... 73
4.4 Conclusion ............................................... 74
References .................................................. 75

5 Kinect-based Gesture Recognition in Volumetric Visualisation of Heart from Cardiac Magnetic Resonance (CMR) Imaging ....... 79
Ahmad Hoirul Basori, Mohamad Rafiq bin Dato’ Abdul Kadir, Rosli Mohd Ali, Farhan Mohamed and Suhaini Kadiman
5.1 Introduction ............................................... 80
5.2 Related Works ............................................ 80
5.3 Arm and Finger Gestural Input on 3D Holographic Interactive Heart Simulation ......................... 81
  5.3.1 Hand Segmentation ................................. 82
  5.3.2 Fingertip Identification ............................ 82
  5.3.3 Gestural Identification ............................. 83
  5.3.4 Interaction Flow .................................... 84
5.4 Experimental Result of Holographic Visualization and Interaction Control .............................. 84
  5.4.1 Environment Details ............................... 87
  5.4.2 Scenario A ........................................... 87
  5.4.3 Scenario B ........................................... 87
  5.4.4 Scenario C ........................................... 88
  5.4.5 Scenario D ........................................... 88
5.5 Conclusion ............................................... 90
References .................................................. 91
6 Designing Simulations for Health Managers in Sub-Saharan African Countries: Adherence to eHealth Services

Miia Parnaudeau and Hervé Garcia

6.1 Health Practices and eHealth services’ Adoption in Question

6.1.1 Health Financing Impacts Governance in SSA

6.1.2 More than Resistance to Change Issues

6.2 A Game Scenario Constructed as an Experimental Tool for Research

6.2.1 Pre-simulation Original Objectives

6.2.2 Decision Tree and Game Mechanics

6.2.3 Debriefing

References

7 Using Visualisation for Disruptive Innovation in Healthcare

Daniel Steenstra and John Ahmet Erkoyuncu

7.1 Introduction

7.2 Innovating Healthcare

7.2.1 Healthcare Challenges

7.2.2 Healthcare Reforms

7.2.3 Healthcare System and Stakeholders

7.2.4 Integrated Care and Care Pathways

7.2.5 Innovation Challenges

7.3 Disruptive Innovation and Healthcare

7.3.1 Types of innovation

7.3.2 Disruptive Innovation in Healthcare

7.4 Visualisation of Healthcare Systems

7.4.1 Need for Visualisation

7.4.2 Literature Review

7.4.3 Specification for Visualisation Systems

7.5 Conceptual Visualisation Technologies

7.5.1 GE Vscan Exemplar Disruptive Innovation

7.5.2 Scope and Roadmap

7.5.3 Mapping Alternative Pathways and Business Models

7.5.4 Analysing Costs and Benefits

7.5.5 Decision Support System

7.5.6 Prototype Development

7.5.7 Discussion

7.6 Future Developments

7.6.1 Mapping and Evaluating Pathways

7.6.2 Decision Support System

7.6.3 Developing Disruptive Healthcare Innovation

7.6.4 Healthcare Systems Design

7.7 Conclusion

19 The Use of Qualitative Design Methods in the Design, Development and Evaluation of Virtual Technologies for Healthcare: Stroke Case Study
David Loudon, Anne Taylor and Alastair S. Macdonald
19.1 Introduction: The Role of Design Methods in Delivering Patient-Centred Innovation
19.2 The Healthcare Context: The Potential Value of Biomechanical Analysis for Stroke Rehabilitation
19.2.1 The Current Use of Biomechanics in Healthcare
19.2.2 Widening the Use of Biomechanics: The Potential Use of Visualisation Software in Stroke Rehabilitation
19.3 Evolution of Visualisation of Biomechanical Data Through Design Methods: Phases 1 and 2
19.3.1 Phase 1: The Prototype Visualisation Tool
19.3.2 Phase 2: Evaluating the Potential of the Visualisation Method with People
19.4 Investigation of Visualisation Software in Stroke Rehabilitation Using Qualitative Design Methods: Phase 3
19.4.1 Intention
19.4.2 Process
19.4.3 Approach to the Visualisations
19.4.4 Qualitative Feedback Process
19.4.5 The Methodological Framework
19.5 Discussion
19.6 Conclusions
