List of Figures ........................................ XIII
List of Tables .......................................... XV
Abbreviations ........................................ XVII

1 Introduction ......................................... 1
   1.1 Request fulfillment of freight forwarding companies .................. 1
   1.2 Objectives and Structure of the Thesis ................................. 3

2 Vehicle Routing ....................................... 7
   2.1 Introduction .......................................... 7
   2.2 Mathematical model for the PDPTW .................................... 11
   2.3 Solution approaches for the PDPTW ................................... 14
      2.3.1 Exact algorithms ........................................... 15
      2.3.2 Heuristic algorithms ....................................... 16
   2.4 The ALNS heuristic of Ropke and Pisinger(2006) ....................... 17
      2.4.1 General ideas ............................................... 18
      2.4.2 Removal operators ......................................... 19
      2.4.3 Insertion operators ......................................... 20
      2.4.4 Adaptive operator choice ................................... 21
      2.4.5 Further settings ........................................... 22

3 Freight Consolidation ............................... 25
   3.1 Introduction .......................................... 25
   3.2 Mathematical formulation ......................................... 28
   3.3 Solution methodology ......................................... 31
      3.3.1 A local search heuristic .................................. 31
      3.3.2 A simulated annealing heuristic ............................. 34
   3.4 Computational experiments ........................................ 37
      3.4.1 Cost function for the freight charge calculation ............... 37
      3.4.2 Test instances .............................................. 39
      3.4.3 Computational results ....................................... 40
4 From Cherry-Picking to Integrated Operational Transportation Planning

4.1 External transportation resources in subcontracting

4.2 Cherry-Picking

4.3 Integrated operational transportation planning

4.3.1 Literature review

4.3.1.1 Subcontracting vehicle routes

4.3.1.2 Subcontracting requests to common carriers

4.3.1.3 Subcontracting both routes and requests

4.3.2 Mathematical model

4.4 Reducing long-term costs through integrated planning

5 Solution approaches for the integrated operational transportation planning problem

5.1 Adaptive large neighborhood search

5.2 Heuristic II: An iterative approach

5.2.1 A set partitioning model of the IOTPP

5.2.2 Construction of candidate routes

5.2.3 Obtaining integer solutions

5.2.4 Overview of the heuristic

5.3 Computational experiments

5.3.1 Instance generation

5.3.2 Computational results

5.4 Conclusions

6 Collaborative transportation planning

6.1 Introduction

6.2 Design of request exchange mechanisms

6.3 Mathematical formulation

6.4 Request exchange mechanisms in literature

7 A route-based request exchange mechanism for the collaborative transportation planning

7.1 The route-based request exchange mechanism

7.1.1 Preprocessing

7.1.2 Initial route generation

7.1.3 Temporary winner determination

10 Computational study on the dynamic collaborative transportation planning

10.1 Test 1: Dynamism of instances .................................................. 127
  10.1.1 Measuring dynamism of instances ...................................... 127
  10.1.2 Instance generation ............................................................ 128
  10.1.3 Simulation results .............................................................. 130
10.2 Test 2: Value of advanced request information .............................. 132
  10.2.1 Instance generation ............................................................ 132
  10.2.2 Simulation settings ............................................................ 133
  10.2.3 Results and discussion ....................................................... 133
10.3 Test 3: Length of the planning period in $RHP-INT$ ......................... 135
  10.3.1 Simulation settings ............................................................ 135
  10.3.2 Results and discussion ....................................................... 135
    10.3.2.1 Total costs of the solutions ........................................ 136
    10.3.2.2 Cost-savings through CTP ......................................... 138
10.4 Test 4: Length of the planning horizon in $RHP-RT$ ........................ 139
  10.4.1 Simulation settings ............................................................ 139
  10.4.2 Results and discussion ....................................................... 139
    10.4.2.1 Total costs of the solutions ........................................ 139
    10.4.2.2 Comparison between $RHP-INT$ and $RHP-RT$ .................. 140
10.5 Test 5: Planning with high subcontracting costs ............................ 141
  10.5.1 Instance adjustment and simulation settings ........................... 141
  10.5.2 Results and discussion ....................................................... 141
10.6 Conclusions ........................................................................ 145

11 Conclusions and future research ........................................ 147
  11.1 Summary and conclusions ..................................................... 147
  11.2 Outlook of future research ..................................................... 150
