Foreword	VII
Preface	XI
Introduction	1
1 Models and Representations	5
1.1 Description of Displacements	5
1.1.1 Homogeneous Matrices	5
1.1.2 Dual Quaternions	6
1.1.3 Dual Orthogonal Matrices	13
1.2 Point Models for Lines and Displacements	15
1.2.1 Klein’s Quadric	15
1.2.2 Study’s Quadric	21
1.2.3 Study’s Sphere	25
1.3 Geometric Algebras, Clifford Algebras	26
1.3.1 Definition of a Geometric Algebra	26
1.3.2 Properties of Clifford Algebras	28
1.3.3 Pin and Spin Groups	33
1.3.4 Matrix Representation of Clifford Algebras	36
1.3.5 Linear Transformation of the Vector Space	37
1.4 The Homogeneous Model	38
1.4.1 The Construction	38
1.4.2 Exterior Algebra	39
1.4.3 Homogeneous Model via projective Grassmann Algebra	41
1.5 The Conformal Model	42
1.5.1 Construction of Conformal Geometric Algebra	43
1.5.2 Blades in CGA	45
1.5.3 Conformal Transformations	48

1.6	A Clifford algebraic Approach to Line Geometry . . .	50
1.6.1	Collineations and Correlations in the Image Space	51
1.6.2	Algebra Representation of Linear Line Manifolds	53
1.6.3	Transformations	55
1.6.4	Collineations as Spin Group	61
1.6.5	Correlations as Pin Group	67
1.6.6	Singular projective Transformations	72
1.7	A Clifford algebraic Approach to Lie Sphere Geometry	72
1.7.1	Lie's Quadric	73
1.7.2	The homogeneous Clifford Algebra Model corresponding to Lie Sphere Geometry	74
1.8	A Clifford algebraic Approach to Study's Quadric . . .	76
1.9	A Clifford algebraic Approach to Study's Sphere . . .	77
1.10	Quadric Geometric Algebra	78
1.10.1	The Embedding	78
1.10.2	Geometric Entities	80
1.10.3	Transformations	84
1.10.4	Effect on Lines and Points	87
1.10.5	Subgroups	89
1.10.6	Generalization to higher Dimensions	94
2	Chain Geometry over Clifford Algebras	101
2.1	Chain Geometry	101
2.1.1	Distance Spaces	101
2.1.2	The projective Line over an \mathcal{L} -algebra	102
2.1.3	The Projective Linear Group $\text{PGL}(\mathcal{R}, 2)$	104
2.1.4	The projective Line over a Subring	105
2.2	Chain Geometry as Incidence Geometry	106
2.2.1	Definition of a Cross Ratio	109
2.3	Quadric Chain Spaces	114
2.4	Real Benz Planes	116
2.5	Jordan-Systems	118
2.6	Contact Spaces	121
2.7	Chain Geometries over Clifford Algebras	123
2.7.1	Grade-1 Subspace	124
2.7.2	Pin and Spin Groups	126
2.8	Quadric Chain Geometry	131
2.8.1	Klein's Quadric	131

2.8.2	Lie's Quadric	133
2.8.3	Study's Quadric	135
2.8.4	Study's Sphere	136
2.9	Quadric Chain Spaces for certain Spin Groups	139
2.9.1	A Quadric Model for dual unit Quaternions	139
2.9.2	Other possible Quadric Models	141
2.10	Cross Ratio of dual unit Quaternions	145
2.10.1	Subspaces on Study's Quadric and Sub Chain Geometries	150
2.10.2	Application to line-symmetric Displacements	151
2.10.3	Dual Quaternion Cross Ratio and Conics on Study's Quadric	156
2.11	Chains of Geometric Entities	161
2.11.1	Quadric Geometric Algebra	161
2.12	Biarc Construction	165
2.12.1	Biarc as touching Chains	168
2.12.2	Biarc on Quadrics in three-dimensional Space	169
2.12.3	Klein's Quadric	176
2.12.4	Biarc on the Dual Sphere	177
3	Kinematic Mappings for Spin Groups	181
3.1	Cayley-Klein Geometries and the homogeneous Model	181
3.1.1	Cayley-Klein Spaces	182
3.1.2	A homogeneous Model for Euclidean Geometry	184
3.2	Kinematic Mappings	185
3.2.1	Study's kinematic Mapping	185
3.2.2	A Mapping for planar Displacements	185
3.3	Kinematic Mappings via Clifford Algebras	187
3.3.1	Study's Mapping via Clifford Algebra	187
3.3.2	Blaschke's and Grünwald's Mapping via Clifford Algebra	190
3.4	Kinematic mappings for other Cayley-Klein Spaces	192
3.4.1	Two-dimensional Cayley-Klein Spaces	192
3.4.2	Three-dimensional Cayley-Klein Spaces	193
3.4.3	Higher dimensional kinematic Mappings	195
3.5	Projective Varieties via kinematic Algebra Elements	197
	Conclusion	201

Index	203
List of Symbols	205
Acknowledgment	209
Bibliography	211
