Preface

This book is my first, and like other books that are doctoral dissertations, it is a result of a sustained effort, alongside a period of self-discovery and self-development. The tremendous potential in the fields of innovation management and information systems motivated me to aim for a trailblazing topic. This ambition tempered over time through constant discussions on structuring and presenting my ideas. These discussions also helped me assimilate various aspects of living in Germany, my current home, so I could enjoy its reliability and not feel too isolated. I learned to enjoy this initially unfamiliar environment through commitment and patience and subsequently developed many new skills and myself.

I have a deep appreciation towards those who encouraged and persisted with me during my dissertation quest. I thank my colleagues (who are now friends) and my advisor for including me in their social and research circles, sparring ideas with me, and for evaluating my work. They taught me to structure my writing and in turn structure my thinking. The more experienced researchers among them acted as valuable mentors and the others a constant stream of much needed fresh thoughts. I am also grateful to all those who participated in this research. Their inspiring work has provided invaluable insights, which this book has sought to capture and convey.

Most of all, thank you, Anja. You have shared the weight of my expectations and weathered my whimsical fits. Having you around made this challenge much easier to overcome!
