## Contents

1. Partial Least Squares Modeling of Lunar Surface FeO Content with Clementine Ultraviolet-Visible Images .................. 1
   Lingzhi Sun and Zongcheng Ling

2. Quantitative Characterization of Lunar Mare Orientale Basalts Detected by Moon Mineralogical Mapper on Chandrayaan-1 ......................................................... 21
   S. Arivazhagan

3. Gravity Changes over Russian River Basins from GRACE ............ 45
   Leonid V. Zotov, C.K. Shum, and Natalya L. Frolova

4. Gravimetric Forward and Inverse Modeling Methods of the Crustal Density Structures and the Crust-Mantle Interface ... 61
   Robert Tenzer and Wenjin Chen

5. Radar Exploration of Mars: Recent Results and Progresses .......... 77
   Stefano Giuppi

6. Automatic Recognition of Impact Craters on the Martian Surface from DEM and Images ............................................. 101
   Tengyu Zhang and Shuanggen Jin

7. Upper Ionosphere of Mars During Solar Quiet and Disturbed Conditions ............................................................. 119
   S.A. Haider

8. Mars Astrobiology: Recent Status and Progress ...................... 147
   Antonio de Morais M. Teles

9. Classical Physics to Calculate Rotation Periods of Planets and the Sun ............................................................... 247
   Sahnggi Park
Wing-Huen Ip

11 Photometric and Spectroscopic Observations of Exoplanet Transit Events ............................................................... 279
Liyun Zhang and Qingfeng Pi

12 Photochemistry of Terrestrial Exoplanet Atmospheres ............... 291
Renyu Hu

13 Planet Formation in Binaries .................................................... 309
P. Thebault and N. Haghighipour
Planetary Exploration and Science: Recent Results and Advances
2015, IX, 340 p. 155 illus., 114 illus. in color., Hardcover
ISBN: 978-3-662-45051-2
