

Contents

Part I Optical Nanoscopy Techniques

STED Fluorescence Nanoscopy	3
Christian Eggeling, and Stefan W. Hell	
Super-Resolution Imaging Through Stochastic Switching and Localization of Single Molecules: An Overview	27
Ke Xu, Sang-Hee Shim, and Xiaowei Zhuang	
A Practical Guide to dSTORM: Super-Resolution Imaging with Standard Fluorescent Probes	65
Markus Sauer	

Part II Labelling Technology for Optical Nanoscopy

Single-Molecule Photocontrol and Nanoscopy	87
Matthew D. Lew, Steven F. Lee, Michael A. Thompson, Hsiao-lu D. Lee, and W. E. Moerner	
Probes for Nanoscopy: Fluorescent Proteins	111
Susan Gayda, Per Niklas Hedde, Karin Nienhaus, and G. Ulrich Nienhaus	
Tailoring Fluorescent Labels for Far-Field Nanoscopy	159
Dmytro A. Yushchenko, and Marcel P. Bruchez	
Probes for Nanoscopy: Photoswitchable Fluorophores	189
Pedro F. Aramendía, and Mariano L. Bossi	
Far-Field Nanoscopy with Conventional Fluorophores: Photostability, Photophysics, and Transient Binding	215
Thorben Cordes, Jan Vogelsang, Christian Steinhauer, Ingo H. Stein, Carsten Forthmann, Andreas Gietl, Jürgen J. Schmied, Guillermo P. Acuna, Sebastian Laurien, Birka Lalkens, and Philip Tinnefeld	

Part III Developments and Applications of Optical Nanoscopy

NASCA Microscopy: Super-Resolution Mapping of Chemical Reaction Centers	245
Gert De Cremer, Bert F. Sels, Dirk E. De Vos, Johan Hofkens, and Maarten B.J. Roeffaers	
Counting Molecules: Toward Quantitative Imaging	263
Maximilian H. Ulbrich	
In Vivo Tracking of Single Biomolecules: What Trajectories Tell Us About the Acting Forces	293
Mario Brameshuber, and Gerhard J. Schütz	
Index	331
