

Contents

1	Introduction	1
1.1	General	1
1.2	Experimental Foundations of Thermal Integrity.	5
1.2.1	Phenomenological Approach.	5
1.2.2	Basic Experimental Data	6
1.2.3	Role of Temperature	8
1.2.4	Role of Time	11
1.2.5	Full-Scale Tests of Machine Parts	12
1.3	Theoretical Foundations of Thermal Integrity	13
1.3.1	Basic Concepts	13
1.3.2	Combined Stress–Strain State	17
1.3.3	Theories of Stresses and Strains	19
1.3.4	Analysis of Structure Failure	27
	References.	30
2	Thermoelasticity	33
2.1	Foundations of Thermoelasticity	33
2.1.1	Thermal Stresses in an Elastic Body	33
2.1.2	Thermoelastic Strains.	37
2.2	The Theory of Thermoelasticity	40
2.2.1	Constitutive Equations	40
2.2.2	Solution Methods	42
2.2.3	Interpretation of Calculation Results	45
2.3	Energy Principles	45
2.3.1	Work and Internal Energy of Elastic Deformation	45
2.3.2	Variational Equations of Isothermal Elasticity.	50
2.3.3	Variational Equations of Thermoelasticity	53
	References.	55

3	Thermal Plasticity: Unidirectional Proportional Loading	57
3.1	Isothermal Plasticity	57
3.1.1	Basic Aspects of Thermal Plasticity.	58
3.1.2	Diagrams of Elastoplastic Deformation	59
3.1.3	Generalized Deformation Diagram.	64
3.1.4	Proportional Elastoplastic Loading.	68
3.2	Non-isothermal Plasticity	73
3.2.1	Uniaxial Non-isothermal Stressed State	73
3.2.2	Multi-axial Non-isothermal Stressed State.	76
3.2.3	Strength and Durability at Unidirectional Non-isothermal Loading.	82
3.2.4	Numerical Examples	86
	References.	88
4	Thermal Plasticity: Cyclic Loading and Heating.	91
4.1	Cyclic Elastoplastic Processes in Solids	92
4.1.1	Cyclic Loadings and Unloadings.	92
4.1.2	Isothermal Cyclic Loading	97
4.2	Isothermal Low Cycle Fatigue (LCF).	99
4.2.1	Experimental Curves of Cyclic Durability	100
4.2.2	Approximate Formulas of Cyclic Durability	102
4.2.3	Failure Conditions for Cyclic Loading	104
4.3	Thermal Fatigue	105
4.3.1	Non-isothermal Cyclic Processes.	105
4.3.2	Factors Influencing Thermal Fatigue	108
4.3.3	Synchronous Non-isothermal Cycles	108
4.4	LCF Under Variable Cycles	111
4.4.1	Unsteady Loading and Heating	111
4.4.2	Unstable Material Characteristics.	118
	References.	123
5	Unsteady Thermal Plasticity	125
5.1	Experimental Backgrounds	126
5.1.1	Diagrams of Arbitrary Alternating Deformation.	127
5.1.2	Prehistory of Loading—Adaptability	130
5.2	Stabilized Anisotropic Hardening—Uniaxial Stressed State.	132
5.2.1	Isothermal Processes	132
5.2.2	Non-isothermal Processes.	139
5.3	Stabilized Anisotropic Hardening—Multi-axial Loading.	141
5.3.1	Stress and Strain Vectors in the Theory of Plasticity	141
5.3.2	Experimental Data on Multi-axial Loading	144
5.3.3	Theoretical Concept.	146

5.4	General Model of Stabilized Anisotropic-Ray Hardening	151
5.4.1	Micro-stresses Modification Due to Turn of Anisotropy Axis	151
5.4.2	Comparison of Calculated and Experimental Results.	155
5.4.3	Analysis of Thermoplasticity Problems Using Finite Element Method	158
5.4.4	Damage Accumulation and Failure	163
5.4.5	Complementary Notes	164
	References.	167
6	Creep and Long-Term Strength at Stationary Stresses and Temperatures	171
6.1	Time-Dependent Mechanical Properties	172
6.1.1	Experimental Backgrounds of Creep and Durability.	172
6.1.2	Experimental Data on Creep and Long-Term Strength at Various Stressed States	177
6.1.3	Approximation of Experimental Data on Creep and Long-Term Durability	180
6.2	Design Analysis of Stresses and Strains at Creep	189
6.2.1	Statement of Design Problems in Creep.	189
6.2.2	Statically Determinable Problems	191
6.2.3	Statically Indeterminable Problems at Steady Creep	192
6.3	Creep Calculation at a Combined Stress–Strain State.	196
6.3.1	Theoretical Backgrounds	196
6.3.2	Redistributions of Stresses at Non-uniform Temperature Field—Residual Stresses	200
6.4	Creep and Durability at Steadily Changing Stresses.	202
6.4.1	Stress Relaxation.	202
6.4.2	Creep Calculation Under Steadily Varying Stresses	203
6.4.3	Prediction of Damage Development of Creep and Durability.	204
	References.	209
7	Cyclic Creep: Thermocyclic Durability	213
7.1	Cyclic Creep	213
7.1.1	Cyclically Changing Stresses	213
7.1.2	Periodic Processes.	217
7.1.3	Cyclically Changing Temperature	219
7.1.4	General Approach to Cyclic Creep Analysis.	222

7.2	Damage at Unsteady Creep. Thermocyclic Durability	225
7.2.1	Cyclic Durability Under Unsteady Creep	225
7.2.2	Damage Summation Under Creep	227
7.2.3	Thermocyclic Durability.	231
	References.	236
8	Creep and Durability at Non-stationary Loading and Heating . . .	237
8.1	Creep at Variable Stresses and Temperatures	237
8.1.1	Experimental Backgrounds	237
8.1.2	Simplest Approaches to Creep Design	242
8.2	Model of Creep-Stabilized Anisotropic-Ray Hardening	244
8.2.1	Empirical and Theoretical Backgrounds	244
8.2.2	Unsteady Uniaxial Creep	248
8.2.3	Unsteady Multi-axial Creep Under Proportional Loading	252
8.2.4	Unsteady Creep Under Non-proportional Loading	255
8.2.5	Special Problems of Unsteady Creep	259
8.2.6	Analysis of Creep Problems Using Finite Element Method	262
	References.	267
9	Estimation of Design Thermal Integrity	271
9.1	General Principles of Thermal Integrity Assurance	272
9.1.1	Margins of Thermal Integrity	272
9.1.2	Non-isothermal-Stressed Structures of Equal Strength	277
9.2	Margins of Local Strength	280
9.2.1	Long-Term Durability	280
9.2.2	Thermocyclic Fatigue	285
9.2.3	Combined Loadings	287
9.3	Bearing Capacity of Mechanical Structures.	289
9.3.1	Material and Structure Destructions	289
9.3.2	Bearing Capacity Margins of Machine Parts	293
9.4	Probabilistic-Statistical Approaches to Strength Estimation	295
9.4.1	Probability of Failure.	295
9.4.2	Probabilistic Safety Factors	298
9.4.3	Probabilistic-Statistical Margin of Durability.	301
