## Contents

1 General Introduction of the Suizhou Meteorite .................. 1
   1.1 Falling Phenomenon of the Suizhou Meteorite .............. 1
   1.2 Chemical Composition ........................................ 4
   1.3 Mineral Composition ........................................... 5
     1.3.1 Minerals in Chondritic Rock ............................... 6
     1.3.2 Minerals in Shock Melt Veins .............................. 8
     1.3.3 Minerals in Fusion Crust .................................. 9
   1.4 Texture Characteristics ........................................ 11
     1.4.1 General Characteristics of Chondrules ................... 11
     1.4.2 Textural Types of Chondrule ............................... 11
   1.5 Isotope Compositions and Chronology ......................... 13
     1.5.1 Lead, Oxygen, and Sulfur Isotope Compositions .......... 13
     1.5.2 Noble Gases in the Suizhou Meteorite .................... 15
     1.5.3 Fission Track Dating ...................................... 15
   1.6 Formation and Evolution of the Suizhou Meteorite .......... 17
   References ........................................................... 19

2 Micro-Mineralogical Investigative Techniques ...................... 21
   2.1 Petrographic Microscopic Studies ............................. 21
   2.2 Scanning Electron Microscopy Energy-Dispersive
       X-Ray Analysis ................................................... 22
   2.3 Electron Probe Microanalysis ................................. 24
   2.4 Raman Microprobe Analysis .................................... 25
   2.5 Synchrotron Radiation X-Ray Diffraction in Situ Analysis . 26
   2.6 X-Ray Micro-Diffraction in Situ Analysis ................. 28
   2.7 Transmission Electron Microscopy ........................... 30
   2.8 Laser Ablation ICP-MS ......................................... 32
   References ........................................................... 33
3 Mineralogy of Suizhou Unmelted Chondritic Rock

3.1 General Remarks

3.2 Rock-Forming Minerals

3.2.1 Olivine

3.2.2 Pyroxenes

3.2.3 Plagioclase Feldspar

3.2.4 Maskelynite

3.3 Opaque Minerals

3.3.1 FeNi Metal

3.3.2 Troilite

3.3.3 Chromite

3.3.4 Ilmenite

3.3.5 Natural Copper

3.4 Phosphate Minerals

3.4.1 Whitlockite (Merrillite)

3.4.2 Chlorapatite

3.5 Summary

References

4 Distinct Morphological and Petrological Features

of the Suizhou Shock Veins

4.1 General Remarks

4.2 Morphological Features of the Suizhou Melt Veins

4.2.1 The Simplest Melt Veins

4.2.2 The Straightest Melt Veins

4.2.3 The Thinnest Melt Veins

4.3 Petrological Features of the Suizhou Shock Veins

4.3.1 Black Fracture-like Features Are Solid Melt Veins

4.3.2 Fully Crystalline Vein Matrix with no Glassy Material Remaining

4.3.3 Abundant Coarse-Grained High-Pressure Minerals in Veins

4.3.4 Three New High-Pressure Minerals in Veins

4.4 Comparison with Melt Veins in NWA 3171 Chondrite

4.5 Summary

References

5 Mineralogy of Suizhou Shock Veins

5.1 General Remarks

5.2 Coarse-Grained High-Pressure Mineral Phases

5.2.1 Ringwoodite, the Spinel-Structured (Mg,Fe)2SiO4

5.2.2 Majorite, the Garnet-Structured (Mg,Fe)SiO3

5.2.3 Akimotoite, the Ilmenite-Structured (Mg,Fe)SiO3

5.2.4 Vitrified (Mg,Fe)SiO3 Perovskite
