## Contents

9 *Continuous Mappings (General Theory) ........................................... 1
  9.1 Metric Spaces ................................................................. 1
    9.1.1 Definition and Examples ........................................... 1
    9.1.2 Open and Closed Subsets of a Metric Space .................... 5
    9.1.3 Subspaces of a Metric Space ....................................... 7
    9.1.4 The Direct Product of Metric Spaces ............................ 8
    9.1.5 Problems and Exercises .............................................. 8
  9.2 Topological Spaces ........................................................ 9
    9.2.1 Basic Definitions .................................................... 9
    9.2.2 Subspaces of a Topological Space ................................ 13
    9.2.3 The Direct Product of Topological Spaces ....................... 13
    9.2.4 Problems and Exercises ............................................. 14
  9.3 Compact Sets .............................................................. 15
    9.3.1 Definition and General Properties of Compact Sets ............ 15
    9.3.2 Metric Compact Sets ............................................... 16
    9.3.3 Problems and Exercises ........................................... 18
  9.4 Connected Topological Spaces .......................................... 19
    9.4.1 Problems and Exercises ........................................... 20
  9.5 Complete Metric Spaces ................................................ 21
    9.5.1 Basic Definitions and Examples ................................ 21
    9.5.2 The Completion of a Metric Space ................................ 24
    9.5.3 Problems and Exercises ........................................... 27
  9.6 Continuous Mappings of Topological Spaces ......................... 28
    9.6.1 The Limit of a Mapping .......................................... 28
    9.6.2 Continuous Mappings ............................................. 30
    9.6.3 Problems and Exercises ........................................... 34
  9.7 The Contraction Mapping Principle ................................... 34
    9.7.1 Problems and Exercises ........................................... 40
## 10 *Differential Calculus from a More General Point of View*  
10.1 Normed Vector Spaces  
10.1.1 Some Examples of Vector Spaces in Analysis  
10.1.2 Norms in Vector Spaces  
10.1.3 Inner Products in Vector Spaces  
10.1.4 Problems and Exercises  
10.2 Linear and Multilinear Transformations  
10.2.1 Definitions and Examples  
10.2.2 The Norm of a Transformation  
10.2.3 The Space of Continuous Transformations  
10.2.4 Problems and Exercises  
10.3 The Differential of a Mapping  
10.3.1 Mappings Differentiable at a Point  
10.3.2 The General Rules for Differentiation  
10.3.3 Some Examples  
10.3.4 The Partial Derivatives of a Mapping  
10.3.5 Problems and Exercises  
10.4 The Finite-Increment Theorem and Some Examples of Its Use  
10.4.1 The Finite-Increment Theorem  
10.4.2 Some Applications of the Finite-Increment Theorem  
10.4.3 Problems and Exercises  
10.5 Higher-Order Derivatives  
10.5.1 Definition of the \( n \)th Differential  
10.5.2 Derivative with Respect to a Vector and Computation of the Values of the \( n \)th Differential  
10.5.3 Symmetry of the Higher-Order Differentials  
10.5.4 Some Remarks  
10.5.5 Problems and Exercises  
10.6 Taylor’s Formula and the Study of Extrema  
10.6.1 Taylor’s Formula for Mappings  
10.6.2 Methods of Studying Interior Extrema  
10.6.3 Some Examples  
10.6.4 Problems and Exercises  
10.7 The General Implicit Function Theorem  
10.7.1 Problems and Exercises  

## 11 Multiple Integrals  
11.1 The Riemann Integral over an \( n \)-Dimensional Interval  
11.1.1 Definition of the Integral  
11.1.2 The Lebesgue Criterion for Riemann Integrability  
11.1.3 The Darboux Criterion  
11.1.4 Problems and Exercises  
11.2 The Integral over a Set  
11.2.1 Admissible Sets  
11.2.2 The Integral over a Set
11.2.3  The Measure (Volume) of an Admissible Set  
11.2.4  Problems and Exercises  

11.3  General Properties of the Integral  
11.3.1  The Integral as a Linear Functional  
11.3.2  Additivity of the Integral  
11.3.3  Estimates for the Integral  
11.3.4  Problems and Exercises  

11.4  Reduction of a Multiple Integral to an Iterated Integral  
11.4.1  Fubini’s Theorem  
11.4.2  Some Corollaries  
11.4.3  Problems and Exercises  

11.5  Change of Variable in a Multiple Integral  
11.5.1  Statement of the Problem and Heuristic Derivation of the Change of Variable Formula  
11.5.2  Measurable Sets and Smooth Mappings  
11.5.3  The One-Dimensional Case  
11.5.4  The Case of an Elementary Diffeomorphism in \( \mathbb{R}^n \)  
11.5.5  Composite Mappings and the Formula for Change of Variable  
11.5.6  Additivity of the Integral and Completion of the Proof of the Formula for Change of Variable in an Integral  
11.5.7  Corollaries and Generalizations of the Formula for Change of Variable in a Multiple Integral  
11.5.8  Problems and Exercises  

11.6  Improper Multiple Integrals  
11.6.1  Basic Definitions  
11.6.2  The Comparison Test for Convergence of an Improper Integral  
11.6.3  Change of Variable in an Improper Integral  
11.6.4  Problems and Exercises  

12  Surfaces and Differential Forms in \( \mathbb{R}^n \)  
12.1  Surfaces in \( \mathbb{R}^n \)  
12.1.1  Problems and Exercises  
12.2  Orientation of a Surface  
12.2.1  Problems and Exercises  
12.3  The Boundary of a Surface and Its Orientation  
12.3.1  Surfaces with Boundary  
12.3.2  Making the Orientations of a Surface and Its Boundary Consistent  
12.3.3  Problems and Exercises  
12.4  The Area of a Surface in Euclidean Space  
12.4.1  Problems and Exercises  
12.5  Elementary Facts About Differential Forms  
12.5.1  Differential Forms: Definition and Examples
