## Contents

1 A Quick Look at the Diffuse Interstellar Medium ............................................. 1
  1.1 Introduction ........................................................................................................ 1
  1.2 Overview of the ISM and Its Role in Spiral Galaxies ........................................ 2
    1.2.1 A Remark on Physical Processes in the ISM ........................................ 4
  1.3 How Does the ISM Manifest Itself in a Galaxy Like the Milky Way? .................. 5
  1.4 Why Does It Break Up into Phases? ................................................................. 9
  1.5 The Phases of the ISM: Observational Signatures ............................................ 10
    1.5.1 The Hot Ionized Medium ........................................................................ 11
    1.5.2 The Warm Ionized Medium ...................................................................... 12
    1.5.3 The Warm Neutral Medium ...................................................................... 13
    1.5.4 The Cold Neutral Medium ....................................................................... 14
  1.6 Molecular Gas: Why Some of It Is a Phase and Some Isn’t .................................. 16
  1.7 The Transition from Atomic to Molecular Gas ................................................. 18
    1.7.1 Photodissociation Regions: PDRs .......................................................... 18
    1.7.2 Diffuse vs. Dark Clouds ............................................................................ 20
  1.8 The Role of Dust .................................................................................................. 21
  1.9 Cosmic Rays ...................................................................................................... 23
  1.10 The Concept of a “Molecular Cloud” ............................................................... 24
  References ............................................................................................................... 25

2 Radiative Transfer Considerations ........................................................................ 29
  2.1 Introduction .......................................................................................................... 29
  2.2 The Transfer of Radiation Through the Interstellar Medium ......................... 30
    2.2.1 Statistical Balance ..................................................................................... 32
    2.2.2 Radiative Processes in the Rayleigh-Jeans Limit ..................................... 34
    2.2.3 The Line Profile Function .......................................................................... 34
    2.2.4 Obtaining Column Densities from Absorption Lines: Equivalent Width and Curve of Growth Methods .............................................................. 39
    2.2.5 Obtaining Column Densities from Emission Lines .................................. 42
