Contents

1 Overview Space Segment ........................................ 1
  1.1 The Space Environment ..................................... 1
    1.1.1 Introduction ....................................... 1
    1.1.2 Launch Vehicle ..................................... 2
    1.1.3 Spacecraft Operational Environment ................. 4
  1.2 Space Systems Engineering .................................. 13
    1.2.1 Definition of System Engineering .................... 13
    1.2.2 Objectives and Requirements ......................... 15
    1.2.3 Design Drivers and Trade-offs ....................... 18
    1.2.4 Concurrent Engineering ............................ 21
  1.3 Fundamentals of Space Communications ..................... 21
    1.3.1 Introduction ....................................... 21
    1.3.2 Baseband .......................................... 22
    1.3.3 Carrier ............................................ 30

References .......................................................... 34

2 Mission Operations ................................................ 35
  2.1 Mission Operations Preparation ............................. 35
    2.1.1 Introduction with Examples .......................... 36
    2.1.2 Driving Factors ..................................... 38
    2.1.3 Personnel, Roles, and Responsibilities ............ 42
    2.1.4 Required Data, Products, and Tools ................. 46
    2.1.5 Activities, Tasks, and Schedule .................... 48
    2.1.6 Review Process ..................................... 50
  2.2 Mission Operations Execution ............................... 54
    2.2.1 Various Phases During Execution ..................... 54
    2.2.2 Staffing of the Flight Control Team ................. 60
    2.2.3 Interactions within the Flight Control Team and Flight Procedures ................................. 64
    2.2.4 The Mission Type Defines the Operational Concept .... 68
    2.2.5 Summary ............................................. 74
2.3 Flight Experience .................................................. 75
2.3.1 Statistics ....................................................... 75
2.3.2 Interpretation of Telemetry ................................. 77
2.3.3 Failure Probability Vs. Operational Experience .......... 80
2.3.4 Contingency Handling ....................................... 81
2.3.5 Mission Example TV-SAT 1 ................................ 84
References .............................................................. 89

3 Communication and Infrastructure .................................. 91
3.1 Control Center Design ........................................... 91
3.1.1 Infrastructure ................................................. 93
3.1.2 Control Center Network .................................... 97
3.1.3 Control Center Software ................................... 100
3.1.4 Outlook ......................................................... 106
3.2 Ground Station Network ......................................... 106
3.2.1 Station Selection ............................................ 107
3.2.2 Station Communication ..................................... 111
3.2.3 LEOP and Routine Operations .............................. 115

4 Flight Dynamic Operations ........................................ 119
4.1 Orbital Dynamics .................................................. 119
4.1.1 Introduction .................................................. 119
4.1.2 Theoretical Aspects ......................................... 120
4.1.3 Flight Dynamics Tasks ...................................... 133
4.2 Attitude Dynamics ................................................ 144
4.2.1 Introduction .................................................. 144
4.2.2 Disturbances ............................................... 147
4.2.3 Attitude Determination .................................... 148
4.2.4 Attitude Propagation ....................................... 153
4.2.5 Attitude Control ........................................... 155
4.2.6 Tasks of AOCS (Attitude and Orbit Control System) .... 159
References .............................................................. 165

5 Mission Planning ...................................................... 167
5.1 The Planning Problem .......................................... 167
5.1.1 Introduction .................................................. 167
5.1.2 General Overview of a Mission Planning System ......... 168
5.1.3 Techniques for Timeline Generation ....................... 171
5.1.4 Summary ..................................................... 185
5.2 Mission Planning for Unmanned Systems .................... 185
5.2.1 Introduction .................................................. 185
5.2.2 Mission Planning System Example ......................... 186
5.2.3 Considerations on Designing a Mission Planning System 188
5.2.4 Mission Planning at Various Time Scales ................ 189
5.2.5 Conclusions and Outlook .................................. 190
5.3 Mission Planning for Human Spaceflight Missions

5.3.1 Introduction

5.3.2 Basic Considerations

5.3.3 Planning Teams

5.3.4 Concept of Crew Flexibility

5.3.5 Planning Phases Overview

5.3.6 Planning Products and Processes

5.3.7 Planning Tools

5.3.8 Conclusion

References

6 Spacecraft Subsystem Operations

6.1 Telemetry, Commanding and Ranging Subsystem

6.1.1 Definition of Subsystem

6.1.2 Signal Characteristics

6.1.3 Design

6.1.4 Monitoring and Commanding

6.1.5 Operational Situations

6.1.6 Outlook to Future Developments

6.2 On-Board Data-Handling Subsystem Operations

6.2.1 Definition of Subsystem

6.2.2 Fundamentals

6.2.3 Space to Ground Data Streams

6.2.4 OBDH Management

6.2.5 Summary and Outlook

6.3 Power and Thermal Operations

6.3.1 PTS Design Aspects

6.3.2 Operations

6.3.3 Contingency Operations

6.4 Propulsion Subsystem Operations

6.4.1 Principle of Propulsion

6.4.2 Configurations of Propulsion System

6.4.3 Real-Time Operations

6.4.4 Off-line Operations

6.5 Attitude and Orbit Control Subsystem Operations

6.5.1 Introduction and Overview

6.5.2 Subsystem Description

6.5.3 AOCS-Related Ground Operations

6.5.4 Experience from Previous Missions

6.5.5 Summary

6.6 Repeater Operations

6.6.1 Repeater Subsystem

6.6.2 Repeater Operations

References
# 7 Special Topics

## 7.1 Human Spaceflight Operations

### 7.1.1 Introduction

### 7.1.2 Manned and Unmanned Missions

### 7.1.3 From a Satellite to a Living Place

### 7.1.4 Crew: Another Subsystem to Operate

### 7.1.5 Ground Support Operations

### 7.1.6 Future

## 7.2 Operations of On-Orbit Servicing Missions

### 7.2.1 Introduction

### 7.2.2 Examples of On-Orbit Servicing Missions

### 7.2.3 Challenges Operating Robotic OOS Missions

### 7.2.4 Satellite Rendezvous

### 7.2.5 Satellite Capture

### 7.2.6 Verification and Test Facilities

### 7.2.7 Summary and Outlook

## 7.3 Interplanetary Operations

### 7.3.1 Types of Interplanetary Missions

### 7.3.2 The Challenges of Interplanetary Flight

### 7.3.3 Mission Control Approach

### 7.3.4 Special Operations

### 7.3.5 Conclusions

## 7.4 Lander Operations

### 7.4.1 Overview

### 7.4.2 Landing Insertion

### 7.4.3 Various Landing Strategies

### 7.4.4 Surface Operations

### 7.4.5 Conclusions
