Preface	xi
0 Introduction	1
 Part I Motivating Problems, Systems and Realizations	
1 Motivating Problems	
1.1 Linear time invariant systems and cascade connection	7
1.2 Characteristic operator functions and invariant subspaces (1)	11
1.3 Characteristic operator functions and invariant subspaces (2)	14
1.4 Factorization of monic matrix polynomials	17
1.5 Wiener-Hopf integral operators and factorization	18
1.6 Block Toeplitz equations and factorization	21
Notes	23
2 Operator Nodes, Systems, and Operations on Systems	
2.1 Operator nodes, systems and transfer functions	25
2.2 Inversion	27
2.3 Products	30
2.4 Factorization and matching of invariant subspaces	32
2.5 Factorization and inversion revisited	37
Notes	48
3 Various Classes of Systems	
3.1 Brodskii systems	49
3.2 Krein systems	50
3.3 Unitary systems	51
3.4 Monic systems	53
3.5 Polynomial systems	57
3.6 Möbius transformation of systems	58
Notes	64

4	Realization and Linearization of Operator Functions	
4.1	Realization of rational operator functions	65
4.2	Realization of analytic operator functions	67
4.3	Linearization	69
4.4	Linearization and Schur complements	73
	Notes	76
5	Factorization and Riccati Equations	
5.1	Angular subspaces and angular operators	77
5.2	Angular subspaces and the algebraic Riccati equation	79
5.3	Angular operators and factorization	80
5.4	Angular spectral subspaces and the algebraic Riccati equation	86
	Notes	88
6	Canonical Factorization and Applications	
6.1	Canonical factorization of rational matrix functions	89
6.2	Application to Wiener-Hopf integral equations	92
6.3	Application to block Toeplitz operators	97
	Notes	100

Part II Minimal Realization and Minimal Factorization

7	Minimal Systems	
7.1	Minimality of systems	105
7.2	Controllability and observability for finite-dimensional systems	109
7.3	Minimality for finite-dimensional systems	112
7.4	Minimality for Hilbert space systems	116
7.5	Minimality in special cases	125
	7.5.1 Brodskii systems	125
	7.5.2 Krein systems	125
	7.5.3 Unitary systems	126
	7.5.4 Monic systems	127
	7.5.5 Polynomial systems	128
	Notes	128
8	Minimal Realizations and Pole-Zero Structure	
8.1	Zero data and Jordan chains	129
8.2	Pole data	142
8.3	Minimal realizations in terms of zero or pole data	145
8.4	Local degree and local minimality	147
8.5	McMillan degree and minimality of systems	160
	Notes	161

9 Minimal Factorization of Rational Matrix Functions

9.1 Minimal factorization	163
9.2 Pseudo-canonical factorization	169
9.3 Minimal factorization in a singular case	172
Notes	179

Part III Degree One Factors, Companion Based Rational Matrix Functions, and Job Scheduling**10 Factorization into Degree One Factors**

10.1 Simultaneous reduction to complementary triangular forms	184
10.2 Factorization into elementary factors and realization	188
10.3 Complete factorization (general)	195
10.4 Quasicomplete factorization (general)	199
Notes	209

11 Complete Factorization of Companion Based Matrix Functions

11.1 Companion matrices: preliminaries	212
11.2 Simultaneous reduction to complementary triangular forms	216
11.3 Preliminaries about companion based matrix functions	231
11.4 Companion based matrix functions: poles and zeros	234
11.5 Complete factorization (companion based)	244
11.6 Maple procedures for calculating complete factorizations	246
11.6.1 Maple environment and procedures	247
11.6.2 Poles, zeros and orderings	247
11.6.3 Triangularization routines (complete)	251
11.6.4 Factorization procedures	252
11.6.5 Example	254
11.7 Appendix: invariant subspaces of companion matrices	260
Notes	266

12 Quasicomplete Factorization and Job Scheduling

12.1 A combinatorial lemma	268
12.2 Quasicomplete factorization (companion based)	272
12.3 A review of the two machine flow shop problem	288
12.4 Quasicomplete factorization and the 2MSFP	293
12.5 Maple procedures for quasicomplete factorizations	301
12.5.1 Maple environment	302
12.5.2 Triangularization routines (quasicomplete)	303
12.5.3 Transformations into upper triangular form	307
12.5.4 Transformation into complementary triangular forms	308

12.5.5 An example: symbolic and quasicomplete	309
12.5.6 Concluding remarks	314
Notes	315

Part IV Stability of Factorization and of Invariant Subspaces

13 Stability of Spectral Divisors

13.1 Examples and first results for the finite-dimensional case	319
13.2 Opening between subspaces and angular operators	322
13.3 Stability of spectral divisors of systems	327
13.4 Applications to transfer functions	332
13.5 Applications to Riccati equations	335
Notes	338

14 Stability of Divisors

14.1 Stable invariant subspaces	339
14.2 Lipschitz stable invariant subspaces	345
14.3 Stable minimal factorizations of rational matrix functions	348
14.4 Stable complete factorizations	352
14.5 Stable factorizations of monic matrix polynomials	356
14.6 Stable solutions of the operator Riccati equation	359
14.7 Stability of stable factorizations	360
14.8 Isolated factorizations and related topics	363
14.8.1 Isolated invariant subspaces	363
14.8.2 Isolated chains of invariant subspaces	366
14.8.3 Isolated factorizations	369
14.8.4 Isolated solutions of the Riccati equation	372
Notes	372

15 Factorization of Real Matrix Functions

15.1 Real matrix functions	375
15.2 Real monic matrix polynomials	378
15.3 Stable and isolated invariant subspaces	379
15.4 Stable and isolated real factorizations	385
15.5 Stability of stable real factorizations	389
Notes	391

Bibliography	393
