

# Contents

<b>I</b>	<b>Around the Center-Focus Problem</b>	
	<i>Colin Christopher</i>	<b>1</b>
	<b>Preface</b>	<b>3</b>
<b>1</b>	<b>Centers and Limit Cycles</b>	<b>5</b>
1.1	Outline of the Center-Focus Problem . . . . .	5
1.2	Calculating the Conditions for a Center . . . . .	9
1.3	Bifurcation of Limit Cycles from Centers . . . . .	10
<b>2</b>	<b>Darboux Integrability</b>	<b>17</b>
2.1	Invariant Algebraic Curves . . . . .	17
2.2	The Darboux Method . . . . .	18
2.3	Multiple Curves and Exponential Factors . . . . .	21
<b>3</b>	<b>Liouvillian Integrability</b>	<b>25</b>
3.1	Differential Fields and Liouvillian Extensions . . . . .	25
3.2	Proof of Singer's Theorem . . . . .	26
3.3	Riccati equations . . . . .	29
<b>4</b>	<b>Symmetry</b>	<b>33</b>
4.1	Algebraic Symmetries . . . . .	33
4.2	Centers for analytic Liénard equations . . . . .	34
4.3	Centers for polynomial Liénard equations . . . . .	37
<b>5</b>	<b>Cherkas' Systems</b>	<b>41</b>
<b>6</b>	<b>Monodromy</b>	<b>49</b>
6.1	Some Basic Examples . . . . .	49
6.2	The Model Problem . . . . .	50
6.3	Applying Monodromy to the Model Problem . . . . .	51
<b>7</b>	<b>The Tangential Center-Focus Problem</b>	<b>55</b>
7.1	Preliminaries . . . . .	56
7.2	Generic Hamiltonians . . . . .	57
7.3	Relative exactness . . . . .	59
<b>8</b>	<b>Monodromy of Hyperelliptic Abelian Integrals</b>	<b>63</b>
8.1	Some Group Theory . . . . .	64
8.2	Monodromy groups of polynomials . . . . .	65
8.3	Proof of the theorem . . . . .	67

<b>9</b>	<b>Holonomy and the Lotka–Volterra System</b>	<b>71</b>
9.1	The monodromy group of a separatrix . . . . .	72
9.2	Integrable points in Lotka–Volterra systems . . . . .	73
<b>10</b>	<b>Other Approaches</b>	<b>79</b>
10.1	Finding components of the center variety . . . . .	79
10.2	Extending Centers . . . . .	80
10.3	An Experimental Approach . . . . .	82
	<b>Bibliography</b>	<b>85</b>
<b>II</b>	<b>Abelian Integrals and Applications to the Weak Hilbert’s 16th Problem</b>	
	<i>Chengzhi Li</i>	<b>91</b>
	<b>Preface</b>	<b>93</b>
<b>1</b>	<b>Hilbert’s 16th Problem and Its Weak Form</b>	<b>95</b>
1.1	Hilbert’s 16th Problem . . . . .	95
1.2	Weak Hilbert’s 16th Problem . . . . .	99
<b>2</b>	<b>Abelian Integrals and Limit Cycles</b>	<b>111</b>
2.1	Poincaré–Pontryagin Theorem . . . . .	111
2.2	Higher Order Approximations . . . . .	116
2.3	The Integrable and Non-Hamiltonian Case . . . . .	120
2.4	The Study of the Period Function . . . . .	122
<b>3</b>	<b>Estimate of the Number of Zeros of Abelian Integrals</b>	<b>127</b>
3.1	The Method Based on the Picard–Fuchs Equation . . . . .	127
3.2	A Direct Method . . . . .	130
3.3	The Method Based on the Argument Principle . . . . .	133
3.4	The Averaging Method . . . . .	138
<b>4</b>	<b>A Unified Proof of the Weak Hilbert’s 16th Problem for <math>n=2</math></b>	<b>143</b>
4.1	Preliminaries and the Centroid Curve . . . . .	143
4.2	Basic Lemmas and the Geometric Proof of the Result . . . . .	145
4.3	The Picard–Fuchs Equation and the Riccati Equation . . . . .	149
4.4	Outline of the Proofs of the Basic Lemmas . . . . .	155
4.5	Proof of Theorem 4.6 . . . . .	156
	<b>Bibliography</b>	<b>159</b>

Limit Cycles of Differential Equations

Christopher, C.; Li, C.

2007, VIII, 171 p., Softcover

ISBN: 978-3-7643-8409-8

A product of Birkhäuser Basel
