## CONTENTS

**Preface** ............................ vii

1 **Introduction** .................... 1
   1.1 *Flexible* Models – An Opportunity for Control Theory ..................... 1
   1.2 *Flexible* Models and their Identification .................................. 2
      1.2.1 Expert Knowledge and Parameters Tuning .................................. 3
      1.2.2 Data-driven Techniques ..................................................... 4
      1.2.3 Precision and Transparency ............................................... 5
      1.2.4 The Need for On-line Algorithms ........................................ 6
   1.3 *Intelligent* Adaptive Systems – A Higher Level of Control .................. 7
   1.4 Structure of the Book ........................................................... 7

**Part I System Modelling: Basic Principles.** ......................... 11

2 **Conventional Models** .................. 13
   2.1 First Principles Models ..................................................... 13
      2.1.1 Heating/cooling Coil Model ................................................. 14
      2.1.2 Fermentation Process Model .............................................. 15
   2.2 *Black-box* Models .......................................................... 17
      2.2.1 Linear *Black-box* Models ................................................ 17
      2.2.2 Polynomial Models .......................................................... 18
      2.2.3 Regression Models .......................................................... 19
      2.2.4 Neural Networks .................................................................. 20
         2.2.4.1 Radial-basis Functions (RBF) Neural Networks .................. 21
         2.2.4.2 Hybrid NN-First Principles Model of a Fermentation Process .... 22
   2.3 Conclusion ................................................................. 22

3 **Flexible Models** ..................... 25
   3.1 *Fuzzy* Set Theory: Basic Introduction ....................................... 26
3.1.1 Fuzzy Set Definition ........................................... 27
3.1.2 Basic Operations over Fuzzy Sets ............................ 28
  3.1.2.1 T-norms .................................................. 28
  3.1.2.2 S-norms .................................................. 29
  3.1.2.3 Negation .................................................. 29
  3.1.2.4 Defuzzification .......................................... 30
  3.1.2.5 Degree of Similarity Between Fuzzy Sets ............... 31
3.2 Models with Flexible Parameters or (In)equalities .......... 31
  3.2.1 Models with Flexible Parameters ......................... 31
  3.2.2 Models with Flexible (In)equalities ..................... 32
3.3 Flexible Rule-based Models .................................... 34
  3.3.1 Flexible Relational Models ................................ 35
  3.3.2 Mamdani type Models ..................................... 36
  3.3.3 Takagi-Sugeno type Models ................................. 37
3.4 Conclusion ....................................................... 41

Part II FLEXIBLE MODELS IDENTIFICATION ......................... 43

4 Non-linear Approach to (Off-line) Identification
  of Flexible Models ............................................... 47
  4.1 Identification Problem Formulation ......................... 47
  4.1.1 Identification Criteria .................................. 48
  4.2 GA -Brief Introduction .................................... 49
  4.3 Centre-of-Gravity-based Crossover Operator ............... 52
    4.3.1 CoG-based Cross-over Operator - How It Works ....... 54
    4.3.2 CoG-based Operator - Why It Works .................. 54
    4.3.3 Test Examples ........................................... 57
  4.4 Encoding and Decoding Indices of Flexible Rules
     and Linguistic Terms ......................................... 57
    4.4.1 Encoding Procedure .................................... 59
    4.4.2 Decoding a Flexible Rule ............................... 59
  4.5 Algorithm of the Non-linear Approach ....................... 62
  4.6 Conclusion .................................................... 63

5 Quasi-linear Approach to FRB Models (Off-line) Identification 67
  5.1 Data Space Clustering ....................................... 67
  5.2 Subtractive Clustering ....................................... 71
  5.3 Parameters (of the Consequent Part) Estimation ........... 72
  5.4 Flexible Rule-based Model Refinements ..................... 73

9 On-line Modelling of Fermentation Processes

9.1 Bio-processes – Specifics of their Modelling
9.2 eR Model of a Fermentation Process
  9.2.1 Lactose Oxidation - Process Specifics
  9.2.2 Experimental Data
  9.2.3 Modelling the Process
    9.2.3.1 First Principles-based Model
    9.2.3.2 eR Model
    9.2.3.3 Analysis of the Results
9.3 Conclusion

10 Intelligent Risk Assessment

10.1 Application of eR Models in Creditworthiness Assessment
  10.1.1 Creditworthiness Assessment: Problem Specifics
  10.1.2 Flexible Rule-based System
  10.1.3 Credit Risk Assessment by a Flexible Rule-based System
10.2 Intelligent Evolving System for Risk Assessment in Civil Aviation
Evolving Rule-Based Models
A Tool for Design of Flexible Adaptive Systems
