1 Biological Background of Testicular Autoimmunity ................................. 1
  1.1 Introduction ................................................................. 1
  1.2 Developmental Phase Differences Between Reproductive and Lymphoid Organs ......................................................... 2
  1.3 Evolution of the Reproductive and Immune Systems ......................... 3
  1.4 Offensive Attack on Germ Cells by Acquired (Adoptive) Immunity .......... 6
  1.5 Harsh Immunological Fate of Male Haploid Germ Cells (Spermatids/Spermatozoa) ............................................................ 7
  1.6 Endocrinological Relation Between the Testicular and Immune Functions ................................................................. 11
References ...................................................................................... 13

2 Microcircumstance for Induction and Prevention of Testicular Autoimmunity ................................................................. 17
  2.1 Introduction ................................................................. 17
  2.2 Autoimmunogenicity of Spermatids and Spermatozoa ......................... 17
  2.3 Protection of Autoimmunogenic Spermatids and Spermatozoa by the Blood-Testis Barrier (BTB) ........................................ 20
  2.4 Protection of Autoimmunogenic Spermatids and Spermatozoa by Various Local Elements Other Than the BTB ...................... 21
  2.5 Cell Populations Involved in the Testicular Immunoregulation .......... 22
    2.5.1 Sertoli Cells .............................................................. 22
    2.5.2 Leydig Cells .............................................................. 25
    2.5.3 Testicular Leukocytes ............................................... 26
    2.5.4 Peritubular Myoid Cells and Basal Lamina ......................... 33
    2.5.5 Blood Capillary Endothelium ....................................... 34
    2.5.6 Lymphatic Capillary Endothelium .................................. 34
    2.5.7 Testicular Germ Cells (TGC) ....................................... 36
    2.5.8 Seminal Plasma .......................................................... 38
  2.6 Resistance to Inflammatory Cell Responses of Various Types in the Testis ................................................................. 38
    2.6.1 Resistance to Rejection of Allografts in the Testis ................. 39

3 **Human Testicular Autoimmunity as a Result of Breakdown of Testicular Immune Privilege**  

3.1 Introduction                                                                                                     | 65   |
3.2 Classification of Testicular Autoimmunity in Men                                                                | 66   |
3.3 Histological Findings from Biopsy Specimens of Infertile Men                                                   | 66   |
3.4 Anti-sperm and Anti-testis Autoantibodies in Men                                                               | 70   |
3.5 Systemic Inflammatory Diseases and Orchitis in Men                                                            | 73   |
3.6 Cellular Immunity in Men ............................................. 75
3.7 Histopathology in Autopsy Cases in Men ......................... 76
3.8 Possible Pathogenesis of Primary Testicular Autoimmunity
in Men ........................................................................... 80
3.9 Human Autoimmune Orchitis and the
Disease Model in Experimental Animals ............................... 83

4 Testicular Autoimmunity by Immunization with Testicular
Antigens Alone in Experimental Animals ............................... 93
4.1 Introduction of Autoimmune Orchitis in Experimental Animals. . 93
4.2 Various EAO Models by Immunization with Testicular
Antigens Alone .................................................................. 94
  4.2.1 EAO Induced by Immunizations with Syngeneic
  TGC Alone ..................................................................... 94
  4.2.2 EAO Induced by Immunization with Allogeneic
  TGC Alone ..................................................................... 115
  4.2.3 EAO Induced by Immunization with Xenogeneic
  TGC Alone ..................................................................... 115
  4.2.4 EAO Induced by Repeated Intracutaneous Injections
  of Testicular Homogenate Alone ...................................... 116
  4.2.5 EAO Induced by Abdominal Placement
  of Donor Testes ............................................................ 116
References ....................................................................... 116

5 Testicular Autoimmunity by the Systemic Treatment
with Immuno-Potentiating Agents in Experimental Animals ... 123
5.1 Introduction .................................................................. 123
5.2 Various EAO Models with the Aid of Immunopotentiators .... 124
  5.2.1 EAO Induced by Treatment with Cyclophosphamide
  and the Following Immunization with TGC ...................... 124
  5.2.2 EAO Induced by Immunization with Testicular
  Antigens or Homogenate Emulsified in Complete
  Freund’s Adjuvant (CFA) ............................................... 124
  5.2.3 EAO Induced by Immunization with Mixture
  Containing Testicular Homogenate and Bordetella
  pertussis (BP) .................................................................. 131
  5.2.4 EAO Induced by Immunization with Testicular
  Antigens or Homogenate Emulsified in CFA and the
  Following Intravenous Administration of BP ................. 132
  5.2.5 EAO Induced by Immunization with Testicular
  Antigens and Klebsiella Lipopolysaccharide ..................... 147
  5.2.6 EAO Induced by Intraperitoneal Injection
  with Both TGC and Listeria monocytogenes ................... 147
5.2.7 EAO Induced by Adoptive Transfer of *Listeria monocytogenes*-Induced Macrophages with TGC Autoantigens ................................................................. 148
5.2.8 EAO Induced by Immunization with Mouse F9 Embryonic Carcinoma Cells+CFA ................................................................. 148
5.2.9 EAO Induced by Immunization with Chemically Modified Seminal Plasma+CFA ................................................................. 149
5.2.10 EAO Induced by Immunization of Fluid of Seminal Vesicles+CFA ................................................................. 149
5.2.11 EAO Induced by Local Transfer of Lymphocytes Cultured with Testicular Cells in the Presence of Xenogeneic Sera ................................................................. 150
5.2.12 EAO-Like Lesion Induced by Intraperitoneal Injection with Infectious Agents Other Than CFA or BP ................................................................. 151
5.2.13 EAO-Like Lesion Induced by Exposure to Endocrine Disruptors ................................................................. 152
References ........................................................................................................... 153

6 Testicular Autoimmunity by Local Injury of the Testis in Experimental Animals .................................................................................................................. 163
6.1 Introduction ........................................................................................................ 163
6.2 Various EAO Models by Local Injuries ................................................................. 163
  6.2.1 EAO Induced by Traumatic Injury of Unilateral Testis ................................................................. 163
  6.2.2 EAO Induced by Spermatic Cord Torsion of Unilateral Testis ................................................................. 164
  6.2.3 EAO Induced by Vasectomy or Vasoligation of Unilateral Testis ................................................................. 165
  6.2.4 EAO Induced by Heating Injury of Unilateral Testis ................................................................. 168
  6.2.5 EAO Induced by Freezing Injury of Unilateral Testis ................................................................. 169
  6.2.6 EAO Induced by Local Injection with Turpentine into Unilateral Testis and Intradermal Injection with CFA ................................................................. 169
  6.2.7 EAO Induced by Local Injection with CFA into Unilateral Testis ................................................................. 170
  6.2.8 EAO Induced by Bilateral CFA Injection into Epididymides ................................................................. 170
  6.2.9 EAO Induced by Intra-testicular Infection with Bacteria ................................................................. 170
  6.2.10 EAO Induced by Intra-testicular Infection with Virus ................................................................. 173
  6.2.11 EAO Induced by Intrinsic Disorder in the Testis ................................................................. 174
References ........................................................................................................... 176

7 Testicular Autoimmunity by Alteration of the Immune System in Experimental Animals .................................................................................................................. 181
7.1 Introduction ........................................................................................................ 181
## 7.2 Various EAO Models by Immune-Alteration

### 7.2.1 EAO Induced by Neonatal Thymectomy

Page 182

### 7.2.2 EAO Induced by Treatment with Cyclosporine A

Page 185

### 7.2.3 EAO Induced by Whole-Body Irradiation

Page 187

### 7.2.4 EAO Induced by Transfer of Normal Lymphocytes

Page 189

### 7.2.5 EAO Induced by Engraftment of Syngeneic Newborn Thymus

Page 189

### 7.2.6 EAO Induced by Engraftment of Xenogeneic Thymus

Page 190

### 7.2.7 EAO Induced by Administration of Anti-IL-2 Receptor Antibody

Page 191

### 7.2.8 EAO Induced by Transfer of Rearranged TCR Alpha-Chain Gene

Page 191

### 7.2.9 EAO Induced by Transfer of HLA-B27 Gene

Page 192

### 7.2.10 EAO Induced by Knockout of TAM Receptor Tyrosine Kinases Triple Genes

Page 193

### 7.2.11 EAO Induced by Knockout of the Autoimmune Regulator (Aire) Gene

Page 194

### 7.2.12 EAO Induced by Knockout of IL-12/IL-35 Common Subunit p35 Gene

Page 195
