1	Introduction	1
1.1	Why Study Neutrino Oscillation?	1
1.2	A Brief History of Neutrino Oscillations	2
	References	4
2	Neutrinos and Weak Interactions in the Standard Model	7
2.1	Introductions	7
2.2	Quarks, Charged Leptons and Neutrinos	7
2.2.1	Wave Function of Fermions	9
2.2.2	Wave Function of Neutrinos	11
2.3	Weak Interactions and Neutrinos	12
2.3.1	Lagrangians for Weak Interactions	12
2.4	Neutrino Interaction Probabilities	15
2.4.1	Neutrinos from Charged Pion Decay	16
2.4.2	Neutrinos from Muon Decay	19
2.4.3	Neutrinos from Nuclear Beta Decays	21
2.4.4	νe^- Scatterings	23
2.4.5	Inverse β Decay	28
3	Particle Oscillations	31
3.1	Introduction	31
3.2	Mass in Quantum Mechanics	32
3.3	Two Flavor Oscillation at Rest	33
3.3.1	Transition Amplitudes	33
3.3.2	General Hamiltonian and Mass Eigenstate	37
3.3.3	Flavor Oscillation	40
3.3.4	Oscillation as Interference	40
3.3.5	Mathematical Formulation of Oscillation	41

4	Neutrino Oscillation	45
4.1	Oscillation of Relativistic Two Flavor Fermions	45
4.1.1	Oscillation of Dirac Neutrinos	45
4.1.2	Oscillation Phase	47
4.1.3	Wave Packet Treatment	49
4.1.4	Oscillation of the Wave Packet	51
4.1.5	Effective Treatment of Relativistic State Equation	52
4.1.6	Oscillation of Antineutrinos	54
4.1.7	Mass Hierarchy for Two Flavor Neutrinos	56
4.2	Three Flavor Neutrino Oscillations	58
4.2.1	Transitions Between Three Neutrino Flavors	59
4.2.2	The Three Flavor Oscillation Formula	61
4.2.3	Standard Parametrization of the Mixing Matrix	63
4.3	Matter Effects	65
4.3.1	Weak Potentials	66
4.3.2	Neutrino Oscillation in Matter	70
4.4	A Paradox in Neutrino Oscillation	73
	References	75
5	Experiments	77
5.1	Introduction	77
5.2	Atmospheric Neutrino Oscillation	79
5.3	Long Baseline Accelerator Experiments	82
5.3.1	The K2K Experiment	83
5.3.2	The MINOS Experiment	85
5.3.3	The T2K Experiment	86
5.3.4	The OPERA Experiment	88
5.4	Solar Neutrino Oscillations	89
5.4.1	The Homestake Experiment	91
5.4.2	The GNO, GALLEX and SAGE Experiments	93
5.4.3	The Super-Kamiokande Experiment	94
5.4.4	The SNO Experiment	95
5.4.5	The Borexino Experiment	99
5.4.6	Summary of Solar Neutrino Observations	100
5.5	Reactor Neutrino Oscillations	102
5.5.1	The KamLAND Experiment	104
5.5.2	The Double Chooz, Daya Bay and RENO Experiments	106
5.6	Summary of the Experiments	110
	References	110
6	Present Status	111
6.1	Determination of the Three Flavor Oscillation Parameters	111
6.1.1	Assignment of Measured Δm^2 's to Δm_{21}^2 and Δm_{31}^2	112
6.1.2	Oscillations at Oscillation Maximums	112

6.1.3	Determination of θ_{12} , θ_{23} and θ_{13}	113
6.1.4	Determination of Δm_{31}^2 and Δm_{32}^2	115
6.2	Determination of Δm_{21}^2 Mass Hierarchy	116
6.3	Present Knowledge of the Neutrino Oscillation Parameters	122
6.3.1	Global Analysis for the Oscillation Parameters	122
6.3.2	Determination of the Transition Matrix Elements	123
6.4	$\nu_\mu - \nu_\tau$ Symmetry and Tri-bimaximal Mixing	126
6.4.1	A Toy Model for $\nu_\mu - \nu_\tau$ Symmetry	126
6.4.2	Tri-bimaximal Mixing	127
	References	128

Neutrino Oscillations

A Practical Guide to Basics and Applications

Suekane, F.

2015, XIV, 185 p. 88 illus., 42 illus. in color., Softcover

ISBN: 978-4-431-55461-5
