6.3 $p/n$ Heterojunction Nanowires ..................................... 59
6.4 Photovoltaic Application of Nanowires .......................... 60
6.5 Nanowires for the Future Photo-Energy Conversion .............. 65
References ...................................................................... 65

7 Single-Particle Triggered Polymerization .............................. 69
7.1 Preliminary Remarks .................................................... 69
7.2 Formation of Nanowires from Alkyne-Functionalized
Compounds .................................................................... 71
7.3 High-Energy Charged Single-Particle as a Versatile
Tool for Nanofabrication of Organic Materials
~From Cross-linking to Polymerization~ ............................. 73
References ...................................................................... 74
High-Energy Charged Particles
Their Chemistry and Use as Versatile Tools for Nanofabrication
Seki, S.; Sakurai, T.; Omichi, M.; Saeki, A.; Sakamaki, D.
2015, X, 74 p. 44 illus., 41 illus. in color., Softcover
ISBN: 978-4-431-55683-1
