

---

# Contents

<b>1</b>	<b>Assumptions in modelling of large artery hemodynamics</b> . . . . .	<b>1</b>
	David A. Steinman	
<b>2</b>	<b>Simplified blood flow model with discontinuous vessel properties: analysis and exact solutions</b> . . . . .	<b>19</b>
	Eleuterio F. Toro, and Annunziato Siviglia	
<b>3</b>	<b>Blood coagulation: a puzzle for biologists, a maze for mathematicians</b> . . . . .	<b>41</b>
	Antonio Fasano, Rafael F. Santos, and Adélia Sequeira	
<b>4</b>	<b>Numerical simulation of electrocardiograms</b> . . . . .	<b>77</b>
	Muriel Boulakia, Miguel A. Fernández, Jean-Frédéric Gerbeau, and Nejib Zenzemi	
<b>5</b>	<b>Mathematical and numerical methods for reaction-diffusion models in electrocardiology</b> . . . . .	<b>107</b>
	Piero Colli-Franzone, Luca F. Pavarino, and Simone Scacchi	
<b>6</b>	<b>Structurally motivated damage models for arterial walls. Theory and application</b> . . . . .	<b>143</b>
	Anne M. Robertson, Michael R. Hill, and Dalong Li	
<b>7</b>	<b>Arterial growth and remodelling is driven by hemodynamics</b> . . . . .	<b>187</b>
	Luca Cardamone, and Jay D. Humphrey	
<b>8</b>	<b>The VPH-Physiome Project: standards, tools and databases for multi-scale physiological modelling</b> . . . . .	<b>205</b>
	Peter Hunter, Chris Bradley, Randall Britten, David Brooks, Luigi Carotenuto, Richard Christie, Alejandro Frangi, Alan Garny, David Ladd, Caton Little, David Nickerson, Poul Nielsen, Andrew Miller, Xavier Planes, Martin Steghoffer, Alistair Young, and Tommy Yu	

<b>9</b>	<b>The role of the variational formulation in the dimensionally-heterogeneous modelling of the human cardiovascular system . . . .</b>	<b>251</b>
	Pablo J. Blanco, and Raúl A. Feijóo	
<b>10</b>	<b>Multiscale modelling of hematologic disorders . . . . .</b>	<b>289</b>
	Dmitry Fedosov, Igor Pivkin, Wenxiao Pan, Ming Dao, Bruce Caswell, and George E. Karniadakis	
<b>11</b>	<b>Multiscale computational analysis of degradable polymers . . . . .</b>	<b>333</b>
	Paolo Zunino, Simone Vesentini, Azzurra Porpora, Joao S. Soares, Alfonso Gautieri, and Alberto Redaelli	
<b>12</b>	<b>Applications of variational data assimilation in computational hemodynamics . . . . .</b>	<b>363</b>
	Marta D’Elia, Lucia Mirabella, Tiziano Passerini, Mauro Perego, Marina Piccinelli, Christian Vergara, and Alessandro Veneziani	
<b>13</b>	<b>Quality open source mesh generation for cardiovascular flow simulations . . . . .</b>	<b>395</b>
	Emilie Marchandise, Paolo Crosetto, Christophe Geuzaine, Jean-François Remacle, and Emilie Sauvage

Modeling of Physiological Flows

Ambrosi, D.; Quarteroni, A.; Roza, G. (Eds.)

2012, X, 418 p., Hardcover

ISBN: 978-88-470-1934-8
