

Contents

1	Understanding the Universe: Cosmology, Astrophysics, Particles, and Their Interactions	1
1.1	Particle and Astroparticle Physics	1
1.2	Particles and Fields	3
1.3	A Quick Look at the Universe	7
1.4	Cosmic Rays	15
2	The Birth and the Basics of Particle Physics	21
2.1	The Atom	21
2.2	The Rutherford Experiment	22
2.3	β Decay and the Neutrino Hypothesis	24
2.4	Uncertainty Principle and the Scale of Measurements	26
2.5	Cross-Section and Interaction Length	27
2.5.1	Total Cross-Section	27
2.5.2	Differential Cross-Sections	29
2.5.3	Cross-Sections at Colliders	29
2.5.4	Partial Cross-Sections	30
2.5.5	Interaction Length	31
2.6	Decay Width and Lifetime	32
2.7	The Fermi Golden Rule and the Rutherford Scattering	34
2.7.1	Transition Amplitude	35
2.7.2	Flux	37
2.7.3	Density of States	37
2.8	The Modern View of Scattering: Quantum Field Exchange	38
2.8.1	Feynman Diagrams	39
2.9	Particle Scattering in Static Fields	40
2.9.1	Extended Charge Distributions (Non Relativistic)	40
2.9.2	Finite Range Interactions	41
2.9.3	Electron Scattering	42

2.10	Special Relativity	44
2.10.1	Lorentz Transformations	45
2.10.2	Space-Time Interval	49
2.10.3	Energy and Momentum	50
2.10.4	Examples of Relativistic Dynamics	52
2.10.5	Mandelstam Variables	53
2.10.6	Lorentz Invariant Fermi Rule	55
2.10.7	The Electromagnetic Tensor and the Covariant Formulation of Electromagnetism	57
2.11	Natural Units	61
3	Cosmic Rays and the Development of Particle Physics	71
3.1	The Puzzle of Atmospheric Ionization and the Discovery of Cosmic Rays	71
3.1.1	Experiments Underwater and in Height	73
3.1.2	The Nature of Cosmic Rays	78
3.2	Cosmic Rays and the Beginning of Particle Physics	78
3.2.1	Relativistic Quantum Mechanics and Antimatter	79
3.2.2	The Discovery of Antimatter	88
3.2.3	Cosmic Rays and the Progress of Particle Physics.	89
3.2.4	The μ Lepton and the π Mesons	91
3.2.5	Strange Particles	93
3.2.6	Mountain-Top Laboratories	95
3.3	Particle Hunters Become Farmers	95
3.4	The Recent Years	97
4	Particle Detection	101
4.1	Interaction of Particles with Matter	101
4.1.1	Charged Particle Interactions	101
4.1.2	Range	110
4.1.3	Photon Interactions	111
4.1.4	Nuclear (Hadronic) Interactions	114
4.1.5	Interaction of Neutrinos	114
4.1.6	Electromagnetic Showers	115
4.1.7	Hadronic Showers.	119
4.2	Particle Detectors	120
4.2.1	Track Detectors	120
4.2.2	Photosensors	129
4.2.3	Cherenkov Detectors	131
4.2.4	Transition Radiation Detectors	133
4.2.5	Calorimeters.	133
4.3	High-Energy Particles	135
4.3.1	Artificial Accelerators	136
4.3.2	Cosmic Rays as Very-High-Energy Beams.	139

4.4	Detector Systems and Experiments at Accelerators	140
4.4.1	Examples of Detectors for Fixed Target Experiments	142
4.4.2	Examples of Detectors for Colliders	145
4.5	Cosmic-Ray Detectors	153
4.5.1	Interaction of Cosmic Rays with the Atmosphere; Extensive Air Showers	154
4.5.2	Detectors of Charged Cosmic Rays	157
4.5.3	Photon Detection	164
4.5.4	Neutrino Detection	177
4.5.5	Detection of Gravitational Waves	182
5	Particles and Symmetries	189
5.1	A Zoo of Particles	189
5.2	Symmetries and Conservation Laws: The Noether Theorem	191
5.3	Symmetries and Groups	193
5.3.1	A Quantum Mechanical View of the Noether's Theorem	194
5.3.2	Some Fundamental Symmetries in Quantum Mechanics	196
5.3.3	Unitary Groups and Special Unitary Groups	199
5.3.4	SU(2)	199
5.3.5	SU(3)	202
5.3.6	Discrete Symmetries: Parity, Charge Conjugation, and Time Reversal	204
5.3.7	Isospin	207
5.3.8	The Eightfold Way	211
5.4	The Quark Model	214
5.4.1	SU(3) _{flavor}	214
5.4.2	The Color	216
5.4.3	Excited States (Nonzero Angular Momenta Between Quarks)	217
5.4.4	The Charm Quark	218
5.4.5	Beauty and Top	221
5.5	Quarks and Partons	223
5.5.1	Elastic Scattering	223
5.5.2	Inelastic Scattering Kinematics	224
5.5.3	Deep Inelastic Scattering	227
5.5.4	The Quark-Parton Model	230
5.5.5	The Number of Quark Colors	236
5.6	Leptons	237
5.6.1	The Discovery of the τ Lepton	237
5.6.2	Three Neutrinos	239

5.7	The Particle Data Group and the Particle Data Book	240
5.7.1	PDG: Estimates of Physical Quantities	241
5.7.2	Averaging Procedures by the PDG	241
6	Interactions and Field Theories	245
6.1	The Lagrangian Representation of a Dynamical System	247
6.1.1	The Lagrangian and the Noether Theorem	248
6.1.2	Lagrangians and Fields; Lagrangian Density	249
6.1.3	Lagrangian Density and Mass	250
6.2	Quantum Electrodynamics (QED)	250
6.2.1	Electrodynamics	250
6.2.2	Minimal Coupling	253
6.2.3	Gauge Invariance	256
6.2.4	Dirac Equation Revisited	259
6.2.5	Klein–Gordon Equation Revisited	270
6.2.6	The Lagrangian for a Charged Fermion in an Electromagnetic Field: Electromagnetism as a Field Theory	272
6.2.7	An Introduction to Feynman Diagrams: Electromagnetic Interactions Between Charged Spinless Particles	275
6.2.8	Electron-Muon Elastic Scattering	279
6.2.9	Renormalization and Vacuum Polarization	281
6.3	Weak Interactions	285
6.3.1	The Fermi Model of Weak Interactions	285
6.3.2	Parity Violation	288
6.3.3	V-A Theory	290
6.3.4	“Left” and “Right” Chiral Particle States	292
6.3.5	Intermediate Vector Bosons	295
6.3.6	The Cabibbo Angle and the GIM Mechanism	304
6.3.7	Extension to Three Quark Families: The CKM Matrix	308
6.3.8	CP Violation	310
6.3.9	Matter–Antimatter Asymmetry	321
6.4	Strong Interactions and QCD	323
6.4.1	Yang–Mills Theories	324
6.4.2	The Lagrangian of QCD	326
6.4.3	Vertices in QCD; Color Factors	327
6.4.4	The Strong Coupling	328
6.4.5	Asymptotic Freedom and Confinement	331
6.4.6	Hadronization; Final States from Hadronic Interactions	331
6.4.7	Hadronic Cross Section	340

7 The Higgs Mechanism and the Standard Model of Particle Physics. 361

7.1 The Higgs Mechanism and the Origin of Mass. 363

7.1.1 Spontaneous Symmetry Breaking 363

7.1.2 An Example from Classical Mechanics 364

7.1.3 Application to Field Theory: Massless Fields Acquire Mass 365

7.1.4 From SSB to the Higgs Mechanism: Gauge Symmetries and the Mass of Gauge Bosons. 367

7.2 Electroweak Unification. 369

7.2.1 The Formalism of the Electroweak Theory. 371

7.2.2 The Higgs Mechanism in the Electroweak Theory, and the Mass of the Electroweak Bosons. 375

7.2.3 The Fermion Masses 378

7.2.4 Interactions Between Fermions and Gauge Bosons . . . 379

7.2.5 Self-interactions of Gauge Bosons. 382

7.2.6 Feynman Diagram Rules for the Electroweak Interaction 382

7.3 The Lagrangian of the Standard Model 383

7.3.1 The Higgs Particle in the Standard Model 384

7.3.2 Standard Model Parameters 384

7.3.3 Accidental Symmetries 386

7.4 Observables in the Standard Model. 387

7.5 Experimental Tests of the SM at Accelerators. 389

7.5.1 Data Versus Experiments: LEP (and the Tevatron) . . . 390

7.5.2 LHC and the Discovery of the Higgs Boson 403

7.6 Beyond the Minimal SM of Particle Physics; Unification of Forces 408

7.6.1 GUT 410

7.6.2 Supersymmetry. 412

7.6.3 Strings and Extra Dimensions; Superstrings 415

7.6.4 Compositeness 417

8 The Standard Model of Cosmology and the Dark Universe. 421

8.1 Experimental Cosmology 422

8.1.1 The Universe Is Expanding 422

8.1.2 Cosmic Microwave Background 429

8.1.3 Primordial Nucleosynthesis 438

8.1.4 Astrophysical Evidence for Dark Matter 443

8.1.5 Age of the Universe 449

8.2 General Relativity. 451

8.2.1 Flat and Curved Spaces 455

8.2.2 The Einstein Equations 458

8.2.3	The Friedmann–Lemaître–Robertson–Walker Model	461
8.2.4	Black Holes	472
8.3	Past, Present, and Future of the Universe	473
8.3.1	Early Universe	473
8.3.2	Inflation and Large-Scale Structures	481
8.3.3	The Λ CDM Model	486
8.4	What Is Dark Matter Made Of, and How Can It Be Found?.	488
8.4.1	Baryonic Dark Matter	488
8.4.2	Weakly Interacting Particles	490
8.4.3	Other Nonbaryonic Candidates	502
9	The Properties of Neutrinos	505
9.1	Sources and Detectors; Evidence of the Transmutation of the Neutrino Flavor	506
9.1.1	Solar Neutrinos, and the Solar Neutrino Problem	506
9.1.2	Neutrino Oscillation in a Two-Flavor System	511
9.1.3	Long-Baseline Reactor Experiments and the Estimate of $\nu_e \rightarrow \nu_\mu$ Oscillation Parameters	515
9.1.4	Atmospheric Neutrinos, and the $\nu_\mu \rightarrow \nu_\tau$ Oscillation	516
9.1.5	Phenomenology of Neutrino Oscillations: Extension to Three Families	519
9.1.6	Short-Baseline Reactor Experiments, and the Determination of θ_{13}	521
9.1.7	Accelerator Neutrinos	522
9.1.8	Explicit Appearance Experiment	524
9.1.9	A Gift from Nature: Geo-Neutrinos	525
9.2	Neutrino Oscillations; Present Knowledge of the Oscillation Parameters	526
9.3	Neutrino Masses	528
9.3.1	The Constraints from Cosmological and Astrophysical Data	528
9.3.2	Direct Measurements of the Electron Neutrino Mass: Beta Decays	529
9.3.3	Direct Measurements of the Muon- and Tau-Neutrino Masses.	531
9.3.4	Incorporating Neutrino Masses in the Theory	531
9.3.5	Majorana Neutrinos and the Neutrinoless Double Beta Decay	533
9.3.6	Present Mass Limits and Prospects	535

10	Messengers from the High-Energy Universe	537
10.1	The Data	537
10.1.1	Charged Cosmic Rays	538
10.1.2	Photons	549
10.1.3	Neutrinos	557
10.1.4	Gravitational Radiation	559
10.2	How Are High-Energy Cosmic Rays Produced?	561
10.2.1	Acceleration of Charged Cosmic Rays	561
10.2.2	Production of High-Energy Gamma Rays	566
10.2.3	Production of High-Energy Neutrinos	570
10.3	Possible Acceleration Sites and Sources	570
10.3.1	Stellar Endproducts	572
10.3.2	Other Galactic Sources	575
10.3.3	Extragalactic Sources	576
10.3.4	Gamma Rays and the Origin of Cosmic Rays	582
10.3.5	Sources of Neutrinos	585
10.3.6	Sources of Gravitational Waves	586
10.4	The Propagation Process	587
10.4.1	Propagation of Charged Cosmic Rays	587
10.4.2	Propagation of Photons	594
10.4.3	Propagation of Neutrinos	597
10.4.4	Propagation of Gravitational Waves	598
10.5	Frontier Physics and Open Questions	598
10.5.1	The Sources	598
10.5.2	Ultrahigh-Energy Phenomena	600
10.5.3	Top-Down Production Mechanisms for CR; WIMPs	603
10.5.4	Lorentz Symmetry Violation	607
10.5.5	Possible Anomalous Photon Propagation Effects	610
11	Astrobiology and the Relation of Fundamental Physics to Life	617
11.1	What is Life?	618
11.1.1	Schrödinger’s Definition of Life	619
11.1.2	The Recipe of Life	619
11.1.3	Life in Extreme Environments	624
11.1.4	The Kickoff	625
11.2	Life on the Solar System, Outside Earth	626
11.2.1	Planets of the Solar System	628
11.2.2	Satellites of Giant Planets	629
11.3	Search for Life Outside the Solar System	631
11.3.1	The “Drake Equation”	631
11.3.2	The Search for Habitable Planets	632
11.3.3	The Fermi Paradox	635

11.3.4	Listening to Messages from Space	636
11.3.5	Sending Messages to the Universe	638
11.4	Conclusions	645
Appendix A: Periodic Table of the Elements.		647
Appendix B: Properties of Materials.		649
Appendix C: Physical and Astrophysical Constants.		651
Index		653
