## 3 Lyapunov Functional for Linear Error Estimates

3.1 Preliminaries

3.1.1 A Puzzling Numerical Example

3.1.2 Lifting of the Balance Law: Temple System Reformulation

3.2 Error Estimate for Non-Resonant Wave-Front Tracking

3.2.1 Wave-Front Tracking Approximations

3.2.2 Stability Estimates for Wave-Front Tracking Approximations

3.2.3 Limit $\delta \to 0$ and Deviation from Kružkov’s Entropy Solution

3.3 Error Estimate for the Non-Resonant Godunov Scheme

3.3.1 Design of a “Wave-Front Tracking/Godunov Scheme”

3.3.2 Control of the Functional’s Jump at Each Averaging Step

3.3.3 Linear $L^1$ Error Estimate and Comparison with Kuznetsov

3.3.4 Decoupling of the Time $t$ and Grid Size $\Delta x$ in (3.22)

3.4 More Transient Numerical Evidence

3.4.1 An Inhomogeneous $N$-Wave

3.4.2 LeVeque-Yee’s Effect for Riccati Source Term

3.4.3 A Stationary Roll-Wave

References

## 4 Early Well-Balanced Derivations for Various Systems

4.1 Huang-Liu’s Piecewise-Steady Scheme for Nozzle Flows

4.1.1 Generalities and Quasi-One Dimensional Flows

4.1.2 Derivation of the Piecewise-Steady Scheme

4.1.3 Relation with Quasi-Steady Wave Propagation Algorithm

4.2 Sod’s Random Choice Method for Diffusion Problems

4.2.1 Derivation of Sod’s Algorithm

4.2.2 Relation with Scharfetter-Gummel’s Procedure

4.3 Special Case: a Model of Atmosphere with Gravity

4.4 A General Localization Process for the Source Term

4.4.1 Preliminary Versions of the Well-Balanced Scheme

4.4.2 Passing from the Scalar Case to General Systems

4.4.3 Flux-Splitting and Relation with Huang-Liu’s Scheme

References

## 5 Viscosity Solutions and Large-Time Behavior for Non-Resonant Balance Laws

5.1 Small $BV$ Existence, Uniqueness and $L^1$ Stability Results

5.1.1 Structural Hypotheses on the $n \times n$ System

5.1.2 Definition of Small $BV$ Viscosity Solutions

5.1.3 Stepping Stones for Existence and Stability Results
# Part I

## 5 Kinetic Scheme with Reflections and Linear Geometric Optics

5.2 Weak and Strong Results for the Large-Time Behavior

5.2.1 Genuine Non-Linearity and Decay of Positive Waves

5.2.2 Non-Interacting Homogeneous Waves and Stationary Solutions

References

## 6 First Numerical Examples on Vlasov-Poisson System

6.1 An Alternative Derivation of the Well-Balanced Kinetic Scheme

6.1.1 The Consistency vs. Stability Dilemma for the Vlasov Scheme

6.1.2 Preserving the Curves of Constant Hamiltonian

6.1.3 Computing the Modified State $f^{\mu}_{j-1}(\pm v_k)$

6.1.4 Discrete Variables $v_k$ and Scattering Matrix Formulation

6.2 First Numerical Examples on Vlasov-Poisson System

6.2.1 Repulsive One-Dimensional Vlasov-Poisson

6.2.2 Gravitational One-Dimensional Vlasov-Poisson

6.2.3 Hamiltonian-Preserving: a First Case of 2D Well-Balanced

6.3 WKB Approximation of Oscillating Schrödinger Equations

6.3.1 Preliminaries on the Linear Schrödinger Equation

6.3.2 $K$-Multivalued Solutions and Moment Inversion

6.3.3 Kinetic Flux-Splitting Scheme for $K$-Multivalued Solutions

6.4 Numerical Results with $K$-Multivalued WKB Ansatz

6.4.1 Numerical Experiments without Potential

6.4.2 Numerical Experiments with Harmonic Potential

References

## 7 Material Variables, Strings and Infinite Domains

7.1 Barenblatt’s Similarity Solutions and Filtration Equations

7.1.1 Material Variables and the Reciprocal Mapping

7.1.2 Stability and Consistency of the Lagrangian Scheme

7.1.3 Discrete Contraction in the Wasserstein Metric

7.2 Approximation of 1D Gravitational Navier-Stokes-Poisson

7.2.1 Reformulation of the System as a Wave Equation

7.2.2 An Elementary Dissipation Property

7.2.3 First-Order Reduction and Numerical Process

References

## Part II Weakly Nonlinear Kinetic Equations

8 The Special Case of 2-Velocity Kinetic Models

8.1 A Localization Process for the Collisional Term

8.1.1 Uniform $BV$ Estimates and Strong Compactness

8.1.2 Limiting Values of the Right-Hand Side

8.1.3 Collision Term $G$ and Straight Line Systems
8.1.4 $L^1(\mathbb{R})$ Contraction Following Kružkov

8.2 Goldstein-Taylor Model: the Fundamental Example

8.2.1 Study in the Rarefied Regime ($\varepsilon \simeq 1$)

8.2.2 Asymptotic-Preserving in the Diffusive Regime ($\varepsilon \to 0$)

8.2.3 Numerical Results in Both Scalings

8.3 Analysis of Quasi-Monotone Well-Balanced Schemes

8.3.1 The Rarefied Regime

8.3.2 The Diffusive Regime: $BV$ Stability

8.3.3 The Diffusive Regime: Limiting Behavior

8.3.4 Application to the Porous Media Equation

8.3.5 Application to the Advection-Diffusion Equation

8.4 Extension to Greenberg-Alt’s Model of Chemotaxis

8.4.1 Hyperbolic Scaling: Well-Balanced Construction

8.4.2 Diffusive Scaling: Asymptotic-Preserving Property

8.4.3 Numerical Results in Hyperbolic Regime

8.4.4 Numerical Results in Diffusive Regime

8.4.5 Numerical Decay Properties in Subcharacteristic Regime

8.5 Excursion in Super-Characteristic Regime

9 Elementary Solutions and Analytical Discrete-Ordinates for Radiative Transfer

9.1 The Method of Case’s Normal Modes Decomposition

9.1.1 Singular Elementary Solutions of the Steady-State Problem

9.1.2 The Analytical Discrete-Ordinate (ADO) Method

9.2 Well-Balanced Scheme with Exact Solver for Kinetic Regime

9.2.1 Dissipative Case $0 < c < 1$ (Adsorption and Scattering)

9.2.2 Conservative Case $c = 1$ (Purely Scattering)

9.2.3 Pure Scattering and Variable Opacity

9.3 Asymptotic-Preserving for Diffusive Regime

9.3.1 Splitting between Maxwellian and Diffusive Fluxes

9.3.2 Numerical Results for Constant $\varepsilon$

9.3.3 Preliminary Results for Discontinuous $\varepsilon$

9.4 Radiation Coupled with Temperature

9.4.1 Modeling and Theoretical Setting

9.4.2 A Positivity-Preserving Well-Balanced Scheme

9.4.3 Results on Su-Olson Benchmark
