

# Contents

<b>1 Introduction</b> .....	1
1.1 Physiology of the respiratory system .....	1
1.2 Some ingredients to elaborate models .....	6
1.3 A functionalist standpoint .....	10
<b>2 Lumped models</b> .....	13
2.1 A simple pipe-balloon mechanical model .....	13
2.2 Extensions of the lumped mechanical model .....	23
2.2.1 Inertia .....	23
2.2.2 Nonlinear pull-back force .....	25
2.2.3 Resistance .....	35
2.2.4 Further extensions .....	37
2.3 Numerical simulations .....	38
2.3.1 Numerical issues .....	38
2.3.2 Computing the flow-volume loop .....	45
2.4 Discussion and bibliographical notes .....	47
<b>3 The lung as a resistive tree</b> .....	53
3.1 Introduction: the Poiseuille's law .....	54
3.2 Connecting pipes: networks and trees .....	59
3.2.1 General principles .....	59
3.2.2 Regular dyadic resistive tree .....	62
3.2.3 Modeling the lung as a resistive tree .....	63
3.3 Abstract resistive networks .....	74
3.4 Computation of the effective resistance .....	83
3.4.1 Perturbation of a regular tree .....	83
3.4.2 Full computation .....	83
3.4.3 A stochastic algorithm .....	85
3.4.4 Numerical tests .....	86
3.5 Indexing issues .....	89

3.6	Optimality and stability issues . . . . .	90
3.7	Discussion and bibliographical notes . . . . .	94
<b>4</b>	<b>Computing velocity fields . . . . .</b>	<b>97</b>
4.1	Some basics on viscous fluid models . . . . .	97
4.2	Free inlet/outlet conditions for Stokes and Navier-Stokes equations	103
4.2.1	Prescribed normal stress . . . . .	105
4.2.2	Prescribed (total) pressure . . . . .	112
4.3	More sophisticated boundary conditions . . . . .	115
4.3.1	Defective boundary conditions . . . . .	115
4.3.2	Dissipative boundary conditions . . . . .	117
4.4	Coupling with the balloon model . . . . .	119
4.4.1	Navier-Stokes / balloon model . . . . .	119
4.4.2	Theoretical issues . . . . .	123
4.5	Numerical solution . . . . .	128
4.5.1	Discretization of the Stokes and Navier-Stokes equations . . . . .	128
4.5.2	Numerical scheme for a two-dimension toy problem . . . . .	131
4.5.3	Three-dimensional computations . . . . .	136
4.6	Spray transport . . . . .	137
4.7	Discussion and bibliographical notes . . . . .	144
<b>5</b>	<b>Gas exchanges . . . . .</b>	<b>147</b>
5.1	Introduction . . . . .	147
5.2	A lumped model for oxygen transfer . . . . .	151
5.2.1	Global model . . . . .	157
5.2.2	A static version of the diffusion model . . . . .	158
5.3	A one dimensional model . . . . .	161
5.3.1	The PDE model . . . . .	161
5.3.2	Time and space discretization scheme . . . . .	164
5.3.3	Simulation results for the one-dimensional model . . . . .	166
5.4	A mathematical approach of diffusing capacities . . . . .	170
5.5	Discussion and bibliographical notes . . . . .	175
<b>6</b>	<b>The lung as an infinite tree . . . . .</b>	<b>181</b>
6.1	Abstract trace theorems for infinite networks . . . . .	183
6.2	Trace theorems on dyadic trees . . . . .	189
6.2.1	The 2-adic framework . . . . .	189
6.2.2	Trace operator onto $L^2$ . . . . .	192
6.2.3	Sobolev regularity and precised trace theorems . . . . .	194
6.3	Embedding the tree in a Euclidean domain . . . . .	204
6.4	Coupling the resistive tree with a one-dimensional elastic medium . . . . .	209
6.5	Navier-Stokes + subtrees + Elastic medium . . . . .	211
6.6	Discussion and bibliographical notes . . . . .	213

<b>7 Data</b> .....	215
7.1 Data in the literature .....	215
7.1.1 Lengths, volumes .....	215
7.1.2 Resistance .....	216
7.1.3 Others .....	219
7.1.4 SI units .....	220
7.2 Data acquisition .....	221
7.2.1 Volumes .....	221
7.2.2 Mechanical characteristics .....	223
<b>Appendix A Solutions to exercises</b> .....	225
<b>Appendix B Complements</b> .....	247
B.1 Diffusion .....	247
B.2 Elements of fluid mechanics .....	248
B.3 Ordinary Differential Equations .....	251
B.4 Hilbert spaces, minimization under constraint .....	253
B.5 Elliptic problems and Finite Element Method .....	254
<b>References</b> .....	259
<b>Glossary</b> .....	267
<b>Index</b> .....	275
