CONTENTS

1 Ca\(^{2+}\) Reactivity in the Gas Phase. Bonding, Catalytic Effects and Coulomb Explosions .............................................. 1
   \textit{Inés Corral, Cristina Trujillo, Jean-Yves Salpin, and Manuel Yáñez}
   1.1 Introduction ............................................ 2
   1.2 Structure and Bonding of Ca\(^{2+}\) Complexes ............. 3
   1.3 Stability of Ca\(^{2+}\) Complexes in the Gas Phase .......... 11
   1.4 Reactivity Of Ca\(^{2+}\) Ions in the Gas Phase .......... 14
   References ............................................... 29

2 From the Gas Phase to a Lipid Membrane Environment: DFT and MD Simulations of Structure and Dynamics of Hydrogen-Bonded Solvates of Bifunctional Heteroazaaromatic Compounds ............... 35
   \textit{Alexander Kyrychenko and Jacek Waluk}
   2.1 Introduction ............................................ 36
   2.2 Electronic Structure of 1H-pyrrolo[3,2-\(h\)]quinoline ......... 38
   2.3 Structure of Gas-Phase Complexes ......................... 41
      2.3.1 Hydrogen-Bonded Complexes with Water ............. 41
      2.3.2 Excited-State Proton Transfer Through Water Bridges .......... 43
      2.3.3 Hydrogen-Bonded Complexes with Methanol .......... 46
      2.3.4 Cluster Size Effect on Fluorescence Quenching in Hydrogen-Bonded Complexes of PQ with Methanol ... 50
   2.4 Hydrogen Bonding of Heteroazaaromatics in Solution ...... 51
      2.4.1 Hydrogen-Bonded Complexes with Methanol and Water .......... 52
      2.4.2 Hydrogen-Bonding Dynamics in Bulk Solvents ...... 56
   2.5 Hydrogen-Bonding-Induced and Excited-state Phenomena in Bifunctional Donor–Acceptor Molecules ............. 58
   2.6 Interaction of Heteroazaaromatics with Lipid Membranes .. 60
      2.6.1 Hydrogen-Bonding at the Membrane Interface ...... 63
   2.7 Probing the Acid–Base Equilibrium at the Membrane Interface ........................................ 67
   2.8 Conclusions ............................................ 71
   References ............................................... 72
3 Formamide as the Model Compound for Photodissociation Studies of the Peptide Bond ................................................................. 77
Mirjana Eckert-Maksic’, Ivana Antol, Mario Vazdar, Mario Barbatti, and Hans Lischka

3.1 Introduction .......................................................... 78
3.2 An Overview of Computational Methods for Studying Dynamics of Fast Photodissociation Processes ......................... 79
3.3 Computational Details ............................................. 82
3.4 Simulations of Non-Adiabatic Photodynamics of Formamide ... 83
3.4.1 Gas Phase Studies ........................................... 83
3.4.2 Photodissociation of Substituted Formamides ............... 89
3.5 Effect of Protonation on Photodissociation of Formamide .. 96
3.6 Effect of Environment on Photodissociation of Formamide . 100
3.7 Conclusions and Final Remarks ................................ 102
References ............................................................. 104

4 Design of Catalysts for Asymmetric Organic Reactions Through Density Functional Calculations .............................................. 107
C.B. Shinisha, Deepa Janardanan, and Raghavan B. Sunoj

4.1 Introduction ....................................................... 107
4.1.1 Organocatalytic Reactions and Theoretical Models . . 108
4.1.2 Sulfur Ylide Promoted Reactions ......................... 111
4.2 Computational Methods ........................................... 113
4.2.1 Terminology .................................................. 114
4.3 Results and Discussion ........................................... 114
4.3.1 Intermolecular Aldol Reaction ............................. 114
4.3.2 Sulfur Ylide Promoted Reactions ......................... 123
4.4 Summary .......................................................... 133
References ............................................................. 134

5 Reactive Processes with Molecular Simulations ......................... 137
Sabyashachi Mishra and Markus Meuwly

5.1 Introduction ....................................................... 137
5.2 Conceptual Approaches ........................................... 140
5.2.1 Molecular Mechanics with Proton Transfer .................. 140
5.2.2 Reactive Molecular Dynamics ............................... 141
5.2.3 Empirical Valence Bond ..................................... 142
5.2.4 ReaxFF ......................................................... 143
5.2.5 Other Approaches ........................................... 145
5.3 Applications ....................................................... 145
5.3.1 Proton Transfer Reactions .................................. 145
5.3.2 Ligand Binding in Heme Proteins ......................... 148
## Contents

9.3.3 Charge Transfer Channel .......................... 255
9.3.4 Inequality Among Same-Type Amino Acids .......... 257
9.3.5 Protein-Solvent Charge Transfer ...................... 261
9.4 Implications of Charge Transfer ......................... 264
References .................................................. 265

10 Beyond Standard Quantum Chemical Semi-Classic Approaches:
Towards a Quantum Theory of Enzyme Catalysis .............. 267

*Orlando Tapia*

10.1 Introduction ...................................... 268
10.2 Enzyme Catalyzed Reactions ........................ 269
10.2.1 Transition Structures and Chemical Mechanisms ..... 271
10.3 Exact Quantum Schemes ............................. 272
10.4 Semi-Classical Schemes and Beyond .................... 274
10.4.1 Semi-classic Hamiltonian Models ................. 274
10.4.2 Invariant Electronic Configuration Space Models ... 277
10.4.3 “Mobile” Electronic-Configuration-Space: Nodal Envelope States ........................................ 278
10.5 Quantum Aspects of Catalysis ......................... 279
10.5.1 Model Quantum Catalyst: H + H and H₂ ............. 279
10.5.2 Quantum Transition States ........................ 281
10.5.3 Abstract BO Transition Structures ................. 283
10.6 Angular Momentum (Spin) and Chemical reactivity .... 285
10.6.1 Spin–Space Separation and Chemical Reactivity ... 286
10.7 Photorespiration: Dioxygen ........................... 293
10.8 More Light ........................................... 295
References .................................................. 298

11 Molecular Dynamics Simulations: Difficulties, Solutions
and Strategies for Treating Metalloenzymes ...................... 299

*Sérgio F. Sousa, Pedro A. Fernandes, and Maria João Ramos*

11.1 Introduction ...................................... 299
11.2 Biomolecular Force Fields ............................ 301
11.2.1 AMBER ........................................ 302
11.2.2 CHARMM ........................................ 303
11.2.3 OPLS .......................................... 304
11.3 Difficulties in Treating a Metalloenzyme ............... 305
11.4 Parameterization Strategies for Metalloproteins ........... 305
11.4.1 The Non-Bonded Model Approach .................. 306
11.4.2 The Bonded Model Approach ....................... 308
11.4.3 Cationic Dummy Atom Approach .................... 309
11.4.4 Alternative Formulations ........................... 310
11.5 Farnesyltransferase as a Test Case .......................... 311
  11.5.1 The Target Protein ......................................... 311
  11.5.2 Initial Strategies ......................................... 313
  11.5.3 Setting a Bonded Model Simulation ....................... 314
  11.5.4 Validation and Application ............................... 323
11.6 Summary ........................................................ 326
References .......................................................... 327

12 QM/MM Energy Functions, Configuration Optimizations,
and Free Energy Simulations of Enzyme Catalysis ................. 331
Haiyan Liu
  12.1 Enzyme Catalysis and QM/MM Modeling ..................... 331
    12.1.1 Non-Covalent Contributions to Enzyme Catalysis .. 331
    12.1.2 Modeling Non-Covalent Interactions in Enzyme
          Reactions by QM/MM .................................. 333
  12.2 QM/MM as Potential Energy Models ........................ 333
    12.2.1 Mechanical Embedding QM/MM .......................... 333
    12.2.2 Electrostatic QM/MM .................................. 334
    12.2.3 QM/MM Partitioning and the Treatment
          of Boundaries ........................................ 335
    12.2.4 Long Range Electrostatic Effects ....................... 338
  12.3 Optimization and Sampling in QM/MM
      Configuration Spaces ..................................... 339
    12.3.1 Effects of System Sizes and Computational
          Characteristics of QM/MM ............................ 340
    12.3.2 Optimization on QM/MM Potential
          Energy Surfaces ....................................... 340
    12.3.3 Free Energies and Sampling in QM/MM
          Configuration Spaces ................................. 344
  12.4 Applying QM/MM to Enzymatic Systems ....................... 347
    12.4.1 Practical Issues ..................................... 347
    12.4.2 Learning How Enzymes Work Through QM/MM
          Modeling .............................................. 349
References .......................................................... 351

13 Computational Modeling of Biological Systems: The LDH Story ..... 355
Silvia Ferrer, Sergio Marti, Vicent Moliner, and Inaki Tunon
  13.1 Introduction ................................................ 356
  13.2 Gas Phase Calculations ..................................... 358
  13.3 Inclusion of Environment Effects ............................ 358
    13.3.1 Cluster Models ....................................... 358
    13.3.2 QM/MM Methods ...................................... 359
  13.4 Statistical Simulations ..................................... 365
