

Contents

1	Introduction	1
1.1	Degree of freedom	2
1.2	Robot manipulator	3
1.3	Robot arms	5
1.4	Robot manipulators in industrial environment	7
2	Homogenous transformation matrices	9
2.1	Translational transformation	9
2.2	Rotational transformation	10
2.3	Pose and displacement	13
2.4	Geometrical robot model	17
3	Geometric description of the robot mechanism	23
3.1	Vector parameters of a kinematic pair	23
3.2	Vector parameters of the mechanism	26
4	Two-segment robot manipulator	33
4.1	Kinematics	33
4.2	Workspace	39
4.3	Dynamics	44
5	Robot sensors	49
5.1	Principles of sensing	49
5.2	Sensors of movement	50
5.2.1	Placing of sensors	50
5.2.2	Potentiometer	51
5.2.3	Optical encoder	52
5.2.4	Tachometer	56
5.3	Force sensors	56
5.4	Robot vision	58

6	Trajectory planning	67
6.1	Interpolation of the trajectory between two points	67
6.2	Interpolation by use of via points	70
7	Robot control	77
7.1	Control of the robot in internal coordinates	79
7.1.1	PD control of position	79
7.1.2	PD control of position with gravity compensation	80
7.1.3	Control of the robot based on inverse dynamics	82
7.2	Control of the robot in external coordinates	85
7.2.1	Control based on the transposed Jacobian matrix	85
7.2.2	Control based on the inverse Jacobian matrix	87
7.2.3	PD control of position with gravity compensation	87
7.2.4	Control of the robot based on inverse dynamics	88
7.3	Control of the contact force	89
7.3.1	Linearization of a robot system through inverse dynamics ..	92
7.3.2	Force control	93
8	Robot environment	97
8.1	Robot grippers	97
8.2	Feeding devices	101
8.3	Robot assembly	107
9	Standards and safety in robotics	119
	Robot vocabulary	133
	Further reading	149
	Index	151
