Contents

1 Introduction ............................................................................................................. 1
   R. Spence, E. So, and C. Scawthorn

Part I  A Global Perspective

2 Earthquakes, an Epidemiological Perspective on Patterns and Trends ..................... 13
   D. Guha-Sapir and F. Vos

3 Earthquake Casualties Research and Public Education ........................................ 25
   M. Petal

4 Disaster Casualties – Accounting for Economic Impacts and Diurnal Variation .......... 51
   C. Scawthorn

5 A Global Earthquake Building Damage and Casualty Database .............................. 65
   R. Spence, E. So, S. Jenkins, A. Coburn, and S. Ruffle

Part II  Casualty Loss Modelling

6 Earthquake Casualty Models Within the USGS Prompt Assessment of Global Earthquakes for Response (PAGER) System ................................................................. 83
   K.S. Jaiswal, D.J. Wald, P.S. Earle, K.A. Porter, and M. Hearne

7 Loss Estimation Module in the Second Generation Software QLARM .................. 95
   G. Trendafiloski, M. Wyss, and P. Rosset
8 Earthquake Casualties Estimation in Emergency Mode .......................... 107
N. Frolova, V. Larionov, and J. Bonnin

9 Estimating Casualties for the Southern California ShakeOut .................................................. 125
K. Shoaf and H. Seligson

Part III Lessons Learnt from Regional Studies

10 Casualty Estimation due to Earthquakes: Injury Structure and Dynamics .................................. 141
S. Goncharov and N. Frolova

11 Seismic Vulnerability and Collapse Probability Assessment of Buildings in Greece ..................... 153
A. Pomonis, A. Kappos, F. Karababa, and G. Panagopoulos

12 Seismic Casualty Evaluation: The Italian Model, an Application to the L’Aquila 2009 Event .................. 171
G. Zuccaro and F. Cacace

13 Mortality and Morbidity Risk in the L’Aquila, Italy Earthquake of 6 April 2009 and Lessons to be Learned ........................................................................................................ 185
D.E. Alexander

14 Major Factors Controlling Earthquake Casualties as Revealed via a Diversified Questionnaire Survey in Ojiya City for the 2004 Mid-Niigata Earthquake .................................................. 199
M. Koyama, S. Okada, and Y. Ohta

Part IV Exploring Approaches to Improving Casualty Modeling

15 Advancements in Casualty Modelling Facilitated by the USGS Prompt Assessment of Global Earthquakes for Response (PAGER) System .............................................................. 221
D. Wald, K. Jaiswal, K. Marano, P. Earle, and T. Allen

16 Challenges in Collating Earthquake Casualty Field Data ............... 231
E.K.M. So

17 Estimating Human Losses in Earthquake Models: A Discussion ....................................................................... 255
M.A. Ferreira, C.S. Oliveira, and F. Mota de Sá
Human Casualties in Earthquakes
Progress in Modelling and Mitigation
Spence, R.; So, E.; Scawthorn, C. (Eds.)
2011, XVIII, 322 p., Hardcover
