## Contents

Preface .............................................................................................................. vii  
Acknowledgement ........................................................................................ ix  

1 Introduction ............................................................................................... 1  
1.1 Microbial Plant Pathogens as a Major Limiting Factor of Crop Production ................................................................. 1  
1.2 Discovery of Fungi as Plant Pathogens ............................................. 2  
1.3 Detection of Fungal Plant Pathogens and Disease Diagnosis .......... 2  
References ................................................................................................... 4  

2 Detection of Fungal Pathogens in Plants ................................................ 5  
2.1 Detection of Fungal Pathogens in Plant Organs ................................ 7  
2.1.1 Biological Methods ................................................................ 7  
2.1.2 Pathogenicity and Host Range ............................................... 24  
2.1.3 Biochemical Methods ............................................................ 26  
2.1.4 Immunoassays ........................................................................ 33  
2.1.5 Nucleic Acid-Based Detection Techniques ........................... 52  
2.2 Detection of Fungal Pathogens in Seeds and Planting Materials ...... 113  
2.2.1 Detection of Fungal Pathogens in Seeds................................ 114  
2.2.2 Detection of Fungal Pathogens in Propagative Planting Materials ................................................................. 130  
2.2.3 Detection of Fungal Pathogens in Postharvest Produce ...... 137  
Appendix 1: General and Selective Media  
for Isolation of Fungal Pathogens ...................................................... 144  
Appendix 2: Assessment of Vegetative Compatibility Relationships Among *Verticillium dahliae* Strains  
(Joaquim and Rowe 1990; Daayf et al. 1995) ................................... 146  
Appendix 3: Media for Generation and Selection  
of Vegetative Compatibility Groups (VCGs) of *Fusarium oxysporum* (Correll et al. 1987) ......................... 147  
Appendix 4: Generation of Antibodies  
Against Fungi (Banks et al. 1992) ..................................................... 148
Appendix 5: Detection of *Botrytis cinerea* by Enzyme-linked Immunosorbent Assay (ELISA) Test (Bossi and Dewey 1992) .................................................. 149

Appendix 6: Quantitative Detection of *Mycosphaerella fijiensis* by Triple Antibody Sandwich (TAS)-ELISA (Otero et al. 2007) .............................................................................. 150

Appendix 7: Detection of Resting Spores of *Plasmodiophora brassicae* in Plant Tissues by ELISA (Orihara and Yamamoto 1998) ................................................................. 152

Appendix 8: Detection of *Fusarium* spp. by Direct Tissue Blot Immunoassay (DTBIA) (Arie et al. 1995; Arie et al. 1998) ................................................................................. 153

Appendix 9: Detection of *Fusarium* spp. in Tomato by Immunofluorescence Assay (Arie et al. 1995) ................................................................. 154

Appendix 10: Detection of *Polymyxa graminis* by Fluorescent Antibody Technique (FAT) (Delfosse et al. 2000) ................................................................. 154

Appendix 11: Detection of *Botrytis cinerea* by Protein A-Gold Labeling Technique (Svircev et al. 1986) ................................................................. 155

Appendix 12: Detection of Fungal Pathogens with DNA Probes (Tisserat et al. 1991) .................................................................................. 156

Appendix 13: Identification of Fungal Pathogens by Repetitive DNA Polymorphism (Panabieres et al. 1989) ................................................................. 156

Appendix 14: Rapid Extraction of DNA from *Fusarium oxysporum* (Plyler et al. 1999) .................................................................................. 157

Appendix 15: Extraction of Genomic DNA from *Claviceps* sp. by Magnetic Separation (Scott Jr et al. 2002) .................................................................................. 157

Appendix 16: Extraction of DNA from Fungal Cultures (Griffin et al. 2002) .................................................................................. 158

Appendix 17: Extraction of Genomic DNA from *Phytophthora* spp. (Lamour and Finley 2006) .................................................................................. 159

Appendix 18: Rapid PCR-Based Method for the Detection of Fungal Pathogen (Harmon et al. 2003) .................................................................................. 161

Appendix 19: Detection of Powdery Mildew Pathogens by PCR-mediated Method (Chen et al. 2008) .................................................................................. 162

Appendix 20: Detection of Rust Pathogen by PCR-Based Method (Weng et al. 2008) .................................................................................. 162

Appendix 21: Detection of *Colletotrichum acutatum* by Arbitrarily Primed (AP)-PCR (Yoshida et al. 2007) .................................................................................. 163

Appendix 22: Detection of *Puccinia coronata* by Real-Time PCR Assay (Jackson et al. 2006) .................................................................................. 164

Appendix 23: Detection of *Colletotrichum* spp. in Strawberry Plants by Real-Time PCR Assays (Garrido et al. 2009) .................................................................................. 165

Appendix 24: Detection of *Phytophthora cactorum* by RAPD-PCR Technique (Causin et al. 2005) .................................................................................. 166
Appendix 25: Detection of *Macrophomina phaseolina* in Cowpea Seeds by DAS-ELISA Technique (Afouda et al. 2009) .................................................. 167

Appendix 26: Detection of Fungal Pathogens in Soybean Seeds by PCR-RFLP Technique (Zhang et al. 1999) ........................................ 169

Appendix 27: Detection of *Rhynchosporium secalis* in Barley Seeds by Competitive PCR (Lee et al. 2002) .................................................. 170

Appendix 28: Detection of *Verticillium dahliae* in Olive Seeds by Nested PCR (Karajeh 2006) .................................................. 171

Appendix 29: Detection of *Pythium* spp. in Carrot Tissue by PCR Assay (Klemsdal et al. 2008) .................................................. 172

References ................................................................................................... 173

3 Detection of Fungal Pathogens in the Environment ..................................... 201

3.1 Detection of Fungal Pathogens in Soil ............................................... 202
  3.1.1 Bioassays .................................................................................. 202
  3.1.2 Immunoassays .......................................................................... 205
  3.1.3 Nucleic Acid-Based Techniques ............................................. 207
  3.1.4 Matrix Assisted Laser Desorption Ionization-Time of Flight Mass Spectrometry ........................................ 219

3.2 Detection of Fungal Pathogens in Water ........................................... 220
  3.2.1 Immunoassays .......................................................................... 220
  3.2.2 Nucleic Acid-Based Techniques ............................................. 221

3.3 Detection of Fungal Pathogens in Air................................................ 223

3.4 Detection of Fungal Pathogens in Alternative Host Plants .................... 230

Appendix 1: Detection of *Plasmodiophora barassicae* from soil (Orihara and Yamamoto 1998) .................................................. 231

Appendix 2: Detection of Resting Spores of *Pythium myriotylum* from Soil by PCR (Wang and Chang 2003) .................................................. 233

Appendix 3: Detection of *Phytophthora sojae* in Soils by PCR Assay (Wang et al. 2006) .................................................. 233

Appendix 4: Detection of *Spongospora subterranea* f.sp. *subterranea* from Soil by PCR Assays (Qu et al. 2006) ....................... 235

Appendix 5: Extraction of DNA Directly from Soil Samples for PCR-Based Assays (Volossiouk et al. 1995) .................................................. 236

Appendix 6: Detection of *Phytophthora nicotianae* in Irrigation Water (Kong et al. 2003) .................................................. 236

Appendix 7: Detection of Airborne Inoculum of *Mycosphaerella brassicae* (Kennedy et al. 1999) .................................................. 237

Appendix 8: Detection of *Monilinia fructicola* Spores in the Air by Real-Time PCR Assay (Luo et al. 2007) .................................................. 239

References ................................................................................................... 240
4 Assessment of Variability in Fungal Plant Pathogens .......................... 245
  4.1 Methods of Assessment of Variability in Fungal Pathogens .......... 246
    4.1.1 Assessment of Variations in Biological Characteristics ........ 246
    4.1.2 Assessment of Variations in Biochemical Characteristics .......... 248
    4.1.3 Assessment of Variations in Immunological Characteristics .......... 250
    4.1.4 Assessment of Variations in Genomic Characteristics .......... 251
  4.2 Assessment of Variability in Sensitivity to Chemicals .............. 262
    4.2.1 Assessment of Variations in Biological Characteristics ........ 262
    4.2.2 Assessment of Variations in Genetic Characteristics .......... 264
Appendix 1: Identification of Guignardia citricarpa by PCR-Based Technique (Peres et al. 2007) .................................... 267
References ................................................................................................... 267

5 Diagnosis of Fungal Diseases of Plants .................................................... 273
  5.1 Choice of Diagnostic Tests for Fungal Pathogens ..................... 274
    5.1.1 Conventional Methods ........................................................ 274
    5.1.2 Molecular Methods ............................................................. 276
  5.2 Agencies Involved in Disease Diagnosis ....................................... 278
    5.2.1 Disease Diagnostic Centers .................................................... 279
    5.2.2 Plant Quarantines ................................................................. 281
References ................................................................................................... 283
