CONTENTS

Contributing Authors ................................................................................................................ix

Preface .............................................................................................................................................. xv

Acknowledgment ............................................................................................................................ xvii

Boron Carbide/Boron Carbide-Carbon Nanofibers Laminates with Weak Interfaces................................................................. 1
N. Orlovskaya, M. Lugovy, V. Slyunyayev, V. Subbotin, F. Liang, J. Gou, J. Kuebler and T. Graule

All Ceramic Cantilever Sensors with Boron Carbide Layer: Advantages and Dimensional Limitations ........................................... 13
M. Lugovy

Raman Effect in Boron and Boron-Rich Compounds ......................................................... 29
H. Werheit and V. Filipov

Experimentally Founded Charge Transport Model for Icosahedral Boron-Rich Solids ........................................................................... 45
H. Werheit

Magnetic and Thermoelectric Properties of Boron-Rich Solids ...................... 63
T. Mori

Scratch Studies in Boron-Rich Lightweight and Ultrahigh Temperature Ceramic ................................................................................... 83
D. Ghosh and G. Subhash

The Electronic Properties of Metal Borides and Borocarbides:
Differences and Similarities .............................................................................................................. 95
S. Lassoued, R. Gautier and J.-F. Halet

Investigation of Hard Boron Rich Solids: Osmium Diboride and β-Rhombohedral Boron .................................................................. 115
M. Hebbache and D. Živković
Elastic and Vibration Properties of Boron–Carbon Ultra Hard Materials.................................................................................................................................................. 131

J. E. Lowther

Processing and Properties of Ultra-Refractory Composites Based on Zr- and Hf-Borides: State of the Art and Perspectives................................. 147
A. Bellosi, S. Guicciardi, V. Medri, F. Monteverde, D. Sciti and L. Silvestroni

Behavior of Boron Doped Graphites and Boron Carbide under Ion Beam and Plasma Irradiation ............................................................. 161
L.B. Begrambekov, O.I. Buzhinsky and A. Zakharov

Vibrational Spectroscopy of Adsorbates on the (111) and (100) Surfaces of Lanthanum Hexaboride................................................................. 181
T. Yorisaki, A. Tillekaratne, YU. Moriya, C. Oshima, S. Otani, and M. Trenary

Zirconium Dodecaboride, a Novel Superconducting Material with Enhanced Surface Characteristics.................................................. 195
M. Belogolovskii, I. Felner and V. Shaternik

Boron under Pressure: Phase Diagram and Novel High-Pressure Phase .......................................................... 207
A. R. Oganov

Behavior of the Crystalline Boroncarbide Coating under Tokamak Conditions ........................................................................................................ 227
O.I. Buzhinskij and V.G. Otroshchenko

Electron Structure, Transport, and Superconducting Properties of ZrB_{12}, ZrB_{2}, YB_{6} and MgB_{2}......................................................... 237
V.A. Gasparov

Densification, Microstructure Evolution and Mechanical Properties of Ultrafine SiC Particle-Dispersed ZrB_{2} Matrix Composites ................. 261
F. Monteverde, S. Guicciardi, C. Melandri and D.D. Fabbriche

Mechanochemically Driven Syntheses of Boride Nanomaterials ........... 273
R.G. Blair
Vibrational Properties of Zr(Hf)B$_2$–SiC UHTC Composites by Micro-Raman Spectroscopy ................................................................. 287
M. Donohue, C. Carpenter and N. Orlovskaya

Synthesis and Sintering Strategies of Boron-Rich Solids .................. 303
L. Sartinska

Field-assisted Densification of Superhard B$_6$O Materials with Y$_2$O$_3$/Al$_2$O$_3$ Addition ................................................................................. 319
M. Herrmann, J. Raethel, K. Sempf, M. Thiele, A. Bales and I. Sigalas

Index ......................................................................................................... 327
