Part I Introductory Concepts

1	The Role of Combustion Technology in the 21st Century	3
	R.W. Bilger	
1.1	Introduction	3
1.2	Sustainable Energy	6
1.3	Technology Forecasts	7
1.4	Implications for Combustion Technology	12
1.5	Prospects for Advanced Computer Modeling of Combustors	14
1.6	Concluding Remarks	17
	References	17
2	Turbulent Combustion: Concepts, Governing Equations and Modeling Strategies	19
	Tarek Echekki and Epaminondas Mastorakos	
2.1	Introduction	19
2.2	Governing Equations	22
	2.2.1 Conservation Equations	22
	2.2.2 Constitutive Relations, State Equations and Auxiliary Relations	24
2.3	Conventional Mathematical and Computational Frameworks for Simulating Turbulent Combustion Flows	28
	2.3.1 Direct Numerical Simulation (DNS)	28
	2.3.2 Reynolds-Averaged Navier-Stokes (RANS)	30
	2.3.3 Large-Eddy Simulation (LES)	32
2.4	Addressing the Closure Problem	35
2.5	Outline of Upcoming Chapters	36
	References	37

Part II Recent Advances and Trends in Turbulent Combustion Models

3	The Flamelet Model for Non-Premixed Combustion	43
	Bénédicte Cuenot	
3.1	Introduction	43
3.2	Fundamental Concepts	44
3.2.1	The Mixture Fraction	45
3.2.2	The Flamelet Solution	46
3.2.3	The Counterflow Diffusion Flame	47
3.2.4	Validity of the Flamelet Approach	48
3.3	RANS Flamelet Modeling	49
3.3.1	Steady Flamelets	50
3.3.2	Transient Flamelets	53
3.3.3	Representative Interactive Flamelets (RIF) Model	55
3.3.4	Eulerian Particle Flamelet Model (EPFM)	56
3.3.5	Flamelet–Progress Variable (FPV) Models	56
3.4	LES Flamelet Modeling	58
3.4.1	Subgrid Scale Modelling	58
3.5	Conclusion	59
	References	59
4	RANS and LES Modelling of Premixed Turbulent Combustion	63
	Stewart Cant	
4.1	Introduction to Premixed Flames	63
4.2	Modelling Framework for RANS and LES	64
4.2.1	Introduction	64
4.2.2	Regimes of Premixed Turbulent Combustion	65
4.2.3	Averaging and Filtering	66
4.2.4	Modelling Principles	68
4.3	Transport Modelling for Premixed Turbulent Flames	70
4.4	Reaction Rate Modelling for Premixed Turbulent Flames	71
4.4.1	Simple Models	71
4.4.2	Flame Surface Density Modelling	73
4.4.3	G-equation Modelling	80
4.4.4	Scalar Dissipation Rate Modelling	83
4.4.5	Other Approaches	85
4.5	Future	86
	References	87
5	The Conditional Moment Closure Model	91
	A. Kronenburg and E. Mastorakos	
5.1	Introduction	91
5.2	Methodological Developments in CMC	93
5.2.1	The CMC Equations	93
5.2.2	Advances in Second Order Closures	96

5.2.3	Advances in Doubly Conditioned Moment Closures	101
5.2.4	Premixed Combustion	107
5.2.5	Liquid Fuel Combustion	108
5.3	Application to Flows of Engineering Interest	109
5.3.1	Dimensionality of the CMC Equation	109
5.3.2	Numerical Methods	110
5.3.3	Applications and Outlook	112
5.4	Conclusion	114
	References	114
6	Transported Probability Density Function Methods for Reynolds-Averaged and Large-Eddy Simulations	119
	D.C. Haworth and S.B. Pope	
6.1	Introduction	119
6.2	A Baseline PDF Formulation	120
6.3	Recent Advances in PDF Methods	124
6.3.1	Mixing Models	124
6.3.2	Hybrid Lagrangian Particle/Eulerian Mesh Methods	125
6.3.3	Eulerian Field Methods	126
6.3.4	Multiscale, Multiphysics Modeling	128
6.3.5	Examples	129
6.4	PDF-Based Methods for Large-Eddy Simulation	132
6.4.1	Spatial Filtering, FDFs, and FDF Transport Equations . .	133
6.4.2	Equivalent Representations, Models, and Algorithms . . .	134
6.4.3	An Alternative Interpretation	135
6.4.4	Examples	136
6.5	Summary and Conclusions	138
	References	139
7	Multiple Mapping Conditioning: A New Modelling Framework for Turbulent Combustion	143
	M.J. Cleary and A.Y. Klimenko	
7.1	Introduction	143
7.2	The Basic MMC Framework	146
7.2.1	Context and Concepts	146
7.2.2	Mapping Functions	147
7.2.3	The Deterministic MMC Model	148
7.2.4	The Stochastic MMC Model	152
7.2.5	Qualitative Properties of MMC	154
7.2.6	Replacement of Reference Variables	154
7.3	Generalised MMC	156
7.3.1	Reference Variables in Generalised MMC	156
7.3.2	Features of Generalised MMC Models	157
7.3.3	MMC with Dissipation-like Reference Variables	159
7.3.4	DNS/LES Simulated Reference Variables	160

7.4	Examples	161
7.4.1	MMC in Homogeneous Turbulence	161
7.4.2	MMC with RANS	164
7.4.3	MMC with the Binomial Langevin Model	165
7.4.4	MMC with LES	167
7.5	Summary and Future Directions	170
	References	171

Part III Advances and Trends in Multiscale Strategies

8	The Emerging Role of Multiscale Methods in Turbulent Combustion	177
	Tarek Echekki	
8.1	Motivation	177
8.2	The Multiscale Nature of Turbulent Combustion Flows	178
8.3	The Case for Multiscale Strategies in Turbulent Combustion	180
8.3.1	Emerging Combustion Technologies	181
8.3.2	Emerging Multiscale Science	182
8.4	Multiscale Considerations for Turbulent Combustion	183
8.4.1	Basic Requirements for Multiscale Approaches in Turbulent Combustion	184
8.4.2	General Frameworks for the Governing Equations for Multiscale Models of Turbulent Combustion	185
8.5	Multiscale Approaches in Turbulent Combustion and Preview of Relevant Chapters	186
8.5.1	Time-Step Acceleration	186
8.5.2	Mesh Adaptive Methods	187
8.5.3	Flame Embedding Approaches	187
8.5.4	Hybrid LES-Low-Dimensional Models	188
8.6	Concluding Remarks	189
	References	190
9	Model Reduction for Combustion Chemistry	193
	Dimitris A. Goussis and Ulrich Maas	
9.1	Introduction	193
9.2	Traditional Methodologies for Reduction: QSSA and PEA	198
9.2.1	The QSSA	199
9.2.2	The PEA	200
9.2.3	Comments on the QSSA and PEA	201
9.2.4	A Common Set-up for the QSSA and PEA	201
9.2.5	The Need for Algorithmic Methodologies for Reduction	204
9.3	Reduction Algorithms	206
9.4	Interaction of Chemistry with Diffusion	208
9.5	Manifold Methods and Tabulation Strategies	209
9.5.1	Principles of Manifold Methods	209
9.5.2	Calculation of Low-Dimensional Manifolds	211

9.6	Tabulation	214
9.7	Concluding Remarks	216
	References	216
10	The Linear-Eddy Model	221
	Suresh Menon and Alan R. Kerstein	
10.1	Motivation	221
10.2	Triplet Map	222
10.3	Map Sizes and Frequency of Occurrence	223
10.4	Application to Passive Mixing	225
10.5	Application to Reacting Flows	226
10.6	Application to Reacting Flows as a Subgrid Model	228
	10.6.1 The LEM Subgrid Model	231
	10.6.2 Large-Scale Advection of the Subgrid Field	232
10.7	LEMLES Applications to Reacting Flows	237
10.8	Summary and Future Prospects	243
	References	244
11	The One-Dimensional-Turbulence Model	249
	Tarek Echekki, Alan R. Kerstein, and James C. Sutherland	
11.1	Motivation	249
11.2	Constant-Property ODT	251
	11.2.1 Model Formulation	251
	11.2.2 Numerical Implementation	255
	11.2.3 Generalizations and Couplings	255
	11.2.4 Features of the ODT Representation of Turbulent Flow ..	256
11.3	Applications of ODT in Combustion	258
	11.3.1 Governing Equations	258
	11.3.2 Stand-Alone ODT Simulations	261
	11.3.3 Hybrid ODTLES	265
11.4	Concluding Remarks	272
	References	274
12	Unsteady Flame Embedding	277
	Hossam A. El-Asrag and Ahmed F. Ghoniem	
12.1	Introduction	278
12.2	Historical Perspective on the Flame Embedding Concept	280
12.3	Elemental Flame Model Formulation	283
12.4	Numerical Solution for the Elemental Flame Model	286
12.5	UFE LES Sub-grid Combustion Model	288
12.6	Numerical Results	291
12.7	Conclusions	296
	References	298

13 Adaptive Methods for Simulation of Turbulent Combustion 301
 John Bell and Marcus Day

13.1 Introduction 301

13.2 Mathematical Formulation 302

13.3 AMR Basic Concepts 305

 13.3.1 Creating and Managing the Grid Hierarchy 305

 13.3.2 AMR Discretization 307

 13.3.3 Hyperbolic Conservation Laws 307

 13.3.4 Elliptic 311

 13.3.5 Parabolic Systems 314

13.4 AMR for Low Mach Number Combustion 315

13.5 Implementation Issues and Software Design 319

 13.5.1 Performance of Adaptive Projection 320

13.6 Application – Lean Premixed Hydrogen Flames 321

 13.6.1 Background 321

 13.6.2 Models and Setup 323

 13.6.3 Simulation Results 324

13.7 Summary 327

References 327

14 Wavelet Methods in Computational Combustion 331
 Robert Prosser and R. Stewart Cant

14.1 Introduction 331

14.2 Wavelet Transforms 333

 14.2.1 Orthogonal Wavelets 333

 14.2.2 Biorthogonal Wavelet Transforms 335

 14.2.3 Second Generation Wavelets 336

14.3 Wavelets as a Method for DNS 337

 14.3.1 The Wavelet Representation of the Derivative 340

 14.3.2 Higher Dimensional Discretizations 341

14.4 An Application of Wavelets to Reacting Flows 343

 14.4.1 Governing Equations 343

14.5 Results 345

14.6 Conclusions 349

References 350

Part IV Cross-Cutting Science

15 Design of Experiments for Gaining Insights and Validating Modeling of Turbulent Combustion 355
 A.R. Masri

15.1 Introduction 355

15.2 The Turbulent Combustion Domain 358

15.3 Basic Considerations 360

 15.3.1 Design Issues 360

15.3.2	Operational Envelopes	362
15.3.3	Experimental Considerations	364
15.3.4	Numerical Considerations	366
15.4	Case Studies	367
15.4.1	The Swirl Stabilised Burner	367
15.4.2	The Premixed Burner in Vitiated Coflows	370
15.4.3	The Piloted Spray Burner	372
15.5	Concluding Remarks	375
	References	377
16	Uncertainty Quantification in Fluid Flow	381
	Habib N. Najm	
16.1	Introduction	381
16.1.1	Polynomial Chaos	384
16.1.2	Challenges in PC UQ Methods	389
16.2	Polynomial Chaos UQ in Fluid Flow Applications	392
16.2.1	Incompressible Flow	393
16.2.2	Reacting Flow	396
16.2.3	Compressible Flow	398
16.2.4	Turbulence	399
16.3	Closure	401
	References	401
17	Computational Frameworks for Advanced Combustion Simulations	409
	J. Ray, R. Armstrong, C. Safta, B. J. Debusschere, B. A. Allan and H. N. Najm	
17.1	Introduction	409
17.2	Literature Review of Computational Frameworks	410
17.3	The Common Component Architecture	413
17.3.1	Features of the Common Component Architecture	414
17.4	Computational Facility for Reacting Flow Science	416
17.4.1	Numerical Methods and Capabilities	416
17.4.2	The Need for Componentization	417
17.5	Computational Investigations Using CCA	420
17.5.1	Fourth-order Combustion Simulations with Adaptive Mesh Refinement	421
17.5.2	Computational Singular Perturbation and Tabulation	425
17.6	Research Topics in Computational Frameworks	431
17.7	Conclusion	432
