# Contents

1 Introduction ..................................................... 1  
  1.1 Fracture Phenomena in Nature and Engineering ............... 1  
  1.2 Fracture Mechanics ........................................ 5  
  1.3 Computational Methods for Cracks .......................... 8  
  1.4 Basic Literature on Fracture Mechanics ...................... 10  

2 Classification of Fracture Processes ............................ 13  
  2.1 Macroscopic Manifestations of Fracture ...................... 13  
  2.2 Microscopic Appearances of Fracture ....................... 17  
  2.3 Classification of Fracture Processes ......................... 18  
  Reference ..................................................... 20  

3 Basics of Fracture Mechanics .................................. 21  
  3.1 Model Assumptions ......................................... 21  
  3.2 Linear-Elastic Fracture Mechanics .......................... 23  
    3.2.1 Two-Dimensional Crack Problems .................... 23  
    3.2.2 Eigenfunctions of the Crack Problem ................. 31  
    3.2.3 Three-Dimensional Crack Problems .................. 35  
    3.2.4 Stress Intensity Factors: K-Concept ............... 38  
    3.2.5 Energy Balance During Crack Propagation ........... 42  
    3.2.6 The J-Integral ....................................... 51  
    3.2.7 Cracks in Anisotropic Elastic Bodies ............... 54  
    3.2.8 Interface Cracks ..................................... 58  
    3.2.9 Cracks in Plates and Shells ......................... 62  
    3.2.10 Fracture Mechanical Weight Functions ............. 65  
    3.2.11 Thermal and Electric Fields ......................... 76  
  3.3 Elastic-Plastic Fracture Mechanics ........................ 80  
    3.3.1 Introduction ......................................... 80  
    3.3.2 Small Plastic Zones at the Crack .................. 81  
    3.3.3 The Dugdale Model .................................. 86  
    3.3.4 Crack Tip Opening Displacement (CTOD) .............. 87  
    3.3.5 Failure Assessment Diagram (FAD) .................... 89  
    3.3.6 Crack Tip Fields ..................................... 91  

5 FE-Techniques for Crack Analysis in Linear-Elastic Structures

5.1 Interpreting the Numerical Solution at the Crack Tip

5.2 Special Finite Elements at the Crack Tip
   5.2.1 Development of Crack Tip Elements
   5.2.2 Modified Isoparametric Displacement Elements
   5.2.3 Computing Intensity Factors from Quarter-Point Elements

5.3 Hybrid Crack Tip Elements
   5.3.1 Development of Hybrid Crack Tip Elements
   5.3.2 2D Crack Tip Elements Based on Mixed Hybrid Model
   5.3.3 3D Crack Tip Elements Based on Hybrid Stress Model

5.4 Method of Global Energy Release Rate
   5.4.1 Realization Within FEA
   5.4.2 Method of Virtual Crack Extension

5.5 Method of Crack Closure Integral
   5.5.1 Basic Equations of Local Energy Method
   5.5.2 Numerical Implementation in FEA 2D
   5.5.3 Numerical Implementation in FEA 3D
   5.5.4 Consideration of Crack Face, Volume and Thermal Loading

5.6 FE-Computation of \( J \)-Contour Integrals

5.7 FE-Calculation of Fracture Mechanics Weight Functions
   5.7.1 Determination by Point Forces
   5.7.2 Determination of Parametric Influence Functions
   5.7.3 Derivation from Displacement Fields
   5.7.4 Application of the \( J \)-VCE-Technique
   5.7.5 Calculation by Means of the Bueckner-Singularity

5.8 Examples
   5.8.1 Tension Sheet with Internal Crack
   5.8.2 Semi-Elliptical Surface Crack Under Tension

References

6 Numerical Calculation of Generalized Energy Balance Integrals

6.1 Generalized Energy Balance Integrals

6.2 Extension to General Loading Cases
   6.2.1 Preconditions for Path-Independence
   6.2.2 Crack Face, Volume and Thermal Loading

6.3 Three-Dimensional Variants
   6.3.1 The 3D-Disk Integral
   6.3.2 Virtual Crack Propagation in 3D
