## Part I The Phenomenon and the Problem of Turbulence

1 The Phenomenon of Turbulence as Distinct from the Problem of Turbulence ............................ 3  
   1.1 Major Qualitative Universal Features of Turbulent Flows ..................................... 6  

2 The Problem of Turbulence as Distinct from the Phenomenon of Turbulence ............................ 9  
   2.1 On Physics and Mathematics of Turbulence ..................................................... 12  

3 What Equations Describe Turbulence Adequately? ...................................................... 15  
   3.1 Navier–Stokes Equations ...................................................................................... 16  
      3.1.1 On Boundary Conditions .............................................................................. 18  
   3.2 Large Re, Zero Viscosity Limit and Relevance of Euler Equations ......................... 18  
   3.3 Averaged Equations, Filtering, Decompositions and Similar Approaches/Issues .......... 19  
      3.3.1 On the Utility of Various Decompositions .................................................. 22  
   3.4 Eulerian Versus Lagrangian Representations ......................................................... 24  
   3.5 Final Remarks ...................................................................................................... 26  

## Part II Issues of Paradigmatic Nature I: Origins and Nature of Turbulence

4 Origins of Turbulence ........................................................................................................ 31  
   4.1 Instability ................................................................................................................ 32  
   4.2 Transition to Turbulence Versus Routes to Chaos .................................................. 33  
   4.3 Many Ways of Creating (Arising/Emerging) Turbulent Flows .................................. 34  

5 Nature of Turbulence ........................................................................................................ 37  
   5.1 Turbulence is Only Apparently Random .................................................................. 39  
   5.2 Limitations of Statistical Methods .......................................................................... 41  
      5.2.1 Statistical Theories .......................................................................................... 42
5.2.2 Statistical Methods of Description and Interpretation of the Data from Laboratory, Field and Numerical Experiments ........................................ 45
5.2.3 On Particular Tools—Examples ........................................ 47

6 Additional Issues of Importance Related to the Use of Statistical Methods ..................................................... 53
6.1 Interpretation and Validation or What About the Right Results for the Right Reasons or Theories Versus Hard Evidence .... 54
6.1.1 Interpretation ................................................................. 54
6.1.2 Validation or Theories Versus Hard Evidence .................... 57
6.2 Ergodicity and Related ....................................................... 61

Part III Issues of Paradigmatic Nature II: Specific Features

7 The N’s of Turbulence .......................................................... 67
7.1 Non-integrability ................................................................. 67
7.2 Nonlinearity ................................................................. 68
7.2.1 Nonlinearity Plus Decompositions Gives Birth to “Cascades” . . 69
7.2.2 Turbulence Is Essentially Rotational and Strongly Dissipative Phenomenon ........................................ 70
7.3 Nonlocality ........................................................................ 74
7.3.1 Introductory/General Remarks ........................................ 74
7.3.2 A Simple Example ............................................................ 77
7.3.3 Direct and Bidirectional Coupling Between Large and Small Scales ......................................................... 78

8 Large Reynolds Number Behavior, Symmetries, Universality .. 85
8.1 Inertial Range, the Roles of Viscosity/Dissipation and Related Issues ................................................................. 86
8.2 Reynolds Number Dependence and Behavior of Turbulent Flows at Large Reynolds Numbers ................................. 91
8.3 Symmetries ................................................................. 94
8.4 Universality ................................................................. 98
8.4.1 Quantitative Universality ................................................. 99
8.4.2 Qualitative Universality .................................................... 101

9 Intermittency and Structure(s) of and/in Turbulence ............... 105
9.1 Intermittency ................................................................. 107
9.1.1 The External Intermittency and Entrainment .................... 108
9.1.2 The Small Scale, Internal or Intrinsic Intermittency ......... 108
9.1.3 Measures/Manifestations of Intermittency ....................... 111
9.1.4 On Possible Origins of Small Scale Intermittency .......... 115
9.2 What Is(Are) Structure(s) of Turbulent Flows? What We See Is Real. The Problem Is Interpretation ......................... 118
9.2.1 On the Origins of Structure(s) of/in Turbulence ............... 119
9.2.2 How Does the Structure of Turbulence ‘Look’? ............... 120
9.2.3 Structure Versus Statistics ........................................ 124
9.2.4 What Kinds of Statistics Are Most Appropriate
to Characterize at Least Some Aspects for Turbulence
Structure .......................................................... 126
9.2.5 Structure(s) Versus Scales and Decompositions ........ 129

Part IV Epilogue

10 On the Status .......................................................... 135
  10.1 What Next .......................................................... 138
  10.2 What to Do .......................................................... 140

11 Appendix. Essential Quotations ..................................... 143
  11.1 To Preface .......................................................... 143
      11.1.1 On Absence of Genuine Theory ......................... 143
  11.2 To Chap. 1 .......................................................... 146
      11.2.1 On Multitude of “Approaches”; for More See Also
            Chaps. 3 and 9 in Tsinober (2009) ...................... 146
  11.3 To Epilogue .......................................................... 148
      11.3.1 On the Continuing Diversity of Opinions on What Is
            Important, What Are the Main Questions and Related . 148

References ................................................................. 151
