# Contents

1 Principle of Digestive Endoscopic Tunnel Technique ........................................ 1
  1.1 Principle of Digestive Endoscopic Tunnel Technique .................................. 1
  1.2 Significance of Digestive Endoscopic Tunnel Technique .............................. 2
  1.3 Disease-Centered Principles of Endoscopic Treatment .................................. 2
  References ........................................................................................................ 3

2 Indications of Tunnel Technique ................................................................. 5
  2.1 Indications ..................................................................................................... 5
  2.2 Relative Indications ..................................................................................... 5
  2.3 Relative Contraindications .......................................................................... 6
  2.4 Absolute Contraindications ......................................................................... 7

3 Endoscopic Ling Classification of Esophageal Lumen ........................................ 9
  3.1 Ling Classification ......................................................................................... 10
  3.2 Generalized Ling Classification .................................................................... 10
  3.3 Significance of Ling Classification ................................................................ 10
  References ........................................................................................................ 13

4 Techniques in Tunnel Establishment .............................................................. 15
  4.1 Patient Positions .......................................................................................... 15
  4.2 Location and Orientation of Tunnel Establishment ....................................... 16
  4.3 Incision and Sealing of the Entry of the Tunnel ............................................. 19
    4.3.1 Longitudinal Incision ........................................................................... 19
    4.3.2 Transverse Incision ............................................................................ 20
    4.3.3 Arc Incision ......................................................................................... 22
  4.4 Healing Process of the Entry Incision ........................................................... 23
  4.5 Prevention of Infection ............................................................................... 26
    4.5.1 Causes of Postoperative Infection ......................................................... 26
    4.5.2 Measures for Preventing Infection ....................................................... 26
    4.5.3 Administration of Prophylactic Antibiotics ......................................... 27
  References ........................................................................................................ 27
5 Process of Tunnel Establishment and Anatomic Marks Within the Tunnel

5.1 Process of Tunnel Establishment
5.1.1 Preoperative Preparation
5.1.2 Equipments
5.1.3 Procedure of Tunnel Technique

5.2 Anatomic Marks Within the Tunnel
5.2.1 Esophagus
5.2.2 Cardia

References

6 Tunnel Technique for Digestive Mucosal Lesions

6.1 ESTD in Superficial Esophageal Neoplasms
6.1.1 Definition
6.1.2 Indications
6.1.3 Contraindications
6.1.4 Preoperative Preparation
6.1.5 Esophageal ESTD Procedures
6.1.6 Postoperative Treatment
6.1.7 Attentions

6.2 ESTD in Superficial Gastric Neoplasms
6.2.1 Definition
6.2.2 Indications
6.2.3 Contraindications
6.2.4 Preoperative Preparation
6.2.5 Patient Preparation
6.2.6 Preoperative Evaluation of the Lesion
6.2.7 Gastric ESTD Procedures
6.2.8 Postoperative Treatment
6.2.9 Attentions

6.3 ESTD in Superficial Colonic Neoplasms

References

7 Tunnel Technique for Esophageal Achalasia

7.1 History, Indications and Procedure of POEM
7.1.1 History of POEM
7.1.2 Indications of POEM
7.1.3 Procedure of POEM

7.2 New Conceptions of Myotomy of Muscularis Propria

7.3 Effects of Ling Classification on POEM
7.3.1 Ling Classification in Patients with Esophageal Achalasia
7.3.2 Effects of Ling Classification on Complications of POEM

Contents
8 Tunnel Technique for SMTs Originating from Muscularis Propria

8.1 Tunnel Technique for Esophageal SMTs Originating from Muscularis Propria

8.1.1 Esophageal SMTs Originating from Muscularis Propria

8.1.2 Tunnel Technique for Resection of Esophageal SMTs from Muscularis Propria

8.1.3 Significance of Tunnel Technique for Esophageal SMTs from Muscularis Propria

8.2 Tunnel Technique for Cardiac SMTs Originating from Muscularis Propria

8.2.1 Cardiac SMTs Originating from Muscularis Propria

8.2.2 Tunnel Technique for Resection of Cardiac SMTs from Muscularis Propria

8.3 Tunnel Technique for Gastric SMTs Originating from Muscularis Propria

8.3.1 Gastric SMTs Originating from Muscularis Propria

8.3.2 Tunnel Technique for Resection of Gastric SMTs from Muscularis Propria

8.3.3 Significance of Tunnel Technique for Gastric SMTs from Muscularis Propria

10 Experimental Researches of Digestive Endoscopic Tunnel Technique

10.1 Experimental Researches of Tunnel Technique for Mucosal Lesions

10.1.1 Materials and Methods

10.1.2 Results

10.1.3 Discussions

10.2 Experimental Researches of Tunnel Technique for Resection of Muscularis Propria

10.2.1 Methods

10.2.2 Results

10.2.3 Discussions

10.3 Experimental Researches of Tunnel Technique for Myotomy of Muscularis Propria

10.3.1 Materials and Methods

10.3.2 Results

10.3.3 Discussions
10.4 Experimental Researches of Tunnel Technique into the Mediastinum ............................................. 119
  10.4.1 Materials and Methods ........................................... 120
  10.4.2 Results .......................................................... 122
  10.4.3 Discussions .................................................... 122

10.5 Experimental Researches of Percutaneous Tunnel Technique for Mediastinal Lesions .............................. 124
  10.5.1 Materials and Methods ........................................... 124
  10.5.2 Results .......................................................... 127
  10.5.3 Discussion ..................................................... 127
