## Contents

### Part I Basics and Fundamentals

1 Ray Optics, Wave Optics and Imaging System Design
   1.1 Ray Optics ................................................. 4
   1.2 Reflection, Refraction and Propagation of Light .......... 5
   1.3 Matrix Formulation of Ray Optics .......................... 10
   1.4 Wave Optics ............................................. 12
   1.5 Helmholtz Equation and Its Consequences ................. 14
   1.6 Solution of Paraxial Plane Wave (Beam Optics) .......... 16
   1.7 Characteristics of Plane Waves ............................ 18
   1.8 Diffraction of Light and Fourier Optics ................. 20
   1.9 Optical Imaging Systems and Microscopy .................. 24
   1.10 Optical Resolution Limit .................................. 28
   1.11 Optical Aberrations: Chromatic, Spherical and Astigmatism 29

Appendix Recommended Reading ................................. 31
References ......................................................... 31

2 Basics of Electromagnetic Theory for Fluorescence Microscopy
   2.1 Electrostatics and Magnetostatics .......................... 33
   2.2 Electromagnetic Theory of Light (Wave Equations) ......... 35
   2.3 Solution of Wave Equation ................................ 37
   2.4 Polarization Effects of Light .............................. 44
   2.5 Transverse Electromagnetic (TEM) Waves .................. 46

Appendix Recommended Reading ................................. 50
References ......................................................... 51

3 Electric Field Effects in Optical Microscopy Systems
   3.1 Diffraction and Fourier Optics ............................. 53
   3.2 Fresnel and Fraunhofer Diffraction ........................ 53
   3.3 System Point Spread Function and Image Formation ........ 56
   3.4 Angular Spectrum Representation for Far Fields ........... 57
   3.5 Field Distribution at the Geometrical Focus ............... 58
   3.6 Field Distribution in Fluorescence Imaging Systems ...... 61
   3.7 Field-Dipole Interaction and the System PSF ............... 65

Appendix Recommended Reading ................................. 69
References ......................................................... 69

4 Quantum Description of Radiation Field and Optical Microscopy
   4.1 Wave-Particle Duality ...................................... 71
   4.2 The Concept of Photon ................................. 73
   4.3 Basics of Quantum Mechanics ............................... 77
   4.4 Field Quantization ........................................ 78
   4.5 Quantum States of Light .................................. 82
## 4.6 Quantum Effects in Microscopy and Imaging

Appendix Recommended Reading

References

### 5 Molecular Physics of Fluorescent Markers

5.1 Basics of Atomic and Molecular Spectroscopy

5.2 The Molecular Orbital Theory

5.3 Electronic States, Selection Rules and Absorption Spectra

5.4 Fluorescent Markers

Appendix Recommended Reading

References

---

## Part II Advanced Imaging

### 6 Basics of Fluorescence and Photophysics

6.1 Fluorescence and Phosphorescence

6.2 Absorption and Lambert-Beer's Law

6.3 Kasha's Law, Stokes Shift and Frank-Condon Principle

6.4 Quantum Yield and Lifetime of Fluorescent Markers

6.5 Fluorescence Anisotropy and Polarization

6.6 Common Fluorophores for Biological Imaging

6.7 Static and Dynamic Quenching: Stern-Volmer Equations

6.8 Metastable States and Its Effect on Photobleaching

6.9 Optical Techniques for Photobleaching Reduction

Appendix Recommended Reading

References

### 7 General Fluorescence Imaging Techniques

7.1 Fluorescence Lifetime Imaging

7.2 Förster's Resonance Energy Transfer (FRET)

7.3 Second Harmonic Generation

7.4 Fluorescence Correlation Spectroscopy

Appendix Recommended Reading

References

### 8 Multiphoton Fluorescence Microscopy

8.1 Perturbation Theory

8.2 Calculation of Transition Probabilities

8.3 Multiphoton Absorption in Fluorescence Microscopy

8.4 Selection Rules for Multiphoton Absorption Process

Appendix Recommended Reading

References

### 9 Super-resolution Fluorescence Microscopy

9.1 Total Internal Reflection Fluorescence (TIRF) Microscopy

9.2 4pi Laser Scanning Fluorescence Microscopy

9.3 Localization Based Super-resolution Fluorescence Microscopy

9.4 SPIM Microscopy and Its Super-resolution Analogue (IML-SPIM)

9.5 Structured Illumination Microscopy

9.6 Stimulated Emission Depletion (STED) Microscopy

9.7 Spatial Filtering Technique based Multi-functional Fluorescence Microscopy

Appendix Recommended Reading

References
## 10 Image Reconstruction for Fluorescence Microscopy

- **10.1 Image Formation in Fluorescence Microscopy** .................................................. 189
- **10.2 Maximum Likelihood (Richardson-Lucy) Method** ........................................... 191
- **10.3 Maximum A-posteriori Method** ......................................................................... 193
- **10.4 Designing Potential Function** ........................................................................... 196
- **10.5 Information Divergence Test (Csiszár)** .......................................................... 197
- **10.6 Algorithm Testing and Data Acquisition** ......................................................... 198

Appendix Recommended Reading ..................................................................................... 201

References ....................................................................................................................... 202

## 11 Future Perspective of Fluorescence Microscopy

- **11.1 Fluorophore Engineering** .................................................................................. 203
- **11.2 New Scanning Systems, Multicolor Imaging and Single Photon Detectors** ....... 204
- **11.3 Emerging Imaging Techniques and Superresolution Microscopy** .................... 205
- **11.4 Depth Imaging in Fluorescence Microscopy** ..................................................... 205
- **11.5 High Throughput Imaging** ................................................................................ 206
- **11.6 Development of Analysis Software** ................................................................ 206
- **11.7 Onchip Microscopy Techniques** ..................................................................... 206

References ....................................................................................................................... 207

Appendix A Selected Mathematical Formula ................................................................... 209

- **A.1 Taylor Series Expansion for Function of One Variable** ................................. 209
- **A.2 Gradient and Laplacian Operators** ................................................................. 209

Appendix B Wave Impedance, Fourier Transform and Modes of Light ...................... 213

- **B.1 Wave Impedence** ......................................................................................... 213
- **B.2 Fourier Transform** ......................................................................................... 214
- **B.3 Higher Order Modes of Light** ........................................................................ 215

Appendix C Bessel Table and Dyes for Super-resolution Imaging .............................. 217
