## Contents

**Part I  Conditional QTL Mapping and Their Applications to Wheat Breeding and Cultivation**

1. **Concept and Research Contents of Conditional QTL Mapping**
   - 1.1 Concept of Conditional QTL and Differences Between the Conditional QTL and Unconditional QTL .......................... 3
     - 1.1.1 Concept of Conditional QTL Mapping .................. 3
     - 1.1.2 Differences Between the Conditional QTL and Unconditional QTL .......................... 4
   - 1.2 Contents of Conditional QTL Analysis .......................... 5
     - 1.2.1 Conditional QTL Mapping for Developmental Dynamic Genetic Effects .......................... 5
     - 1.2.2 Conditional QTL Mapping for Associated Traits Genetic Effects .......................... 9
     - 1.2.3 Conditional QTL Mapping for Agronomic Measure Coupling Genetic Effects .......................... 11
   - References ....................................................................... 13

2. **Conditional QTL Mapping of Major Quality Traits**
   - 2.1 Conditional QTL Mapping for Protein Dynamic Accumulation Pattern in Wheat Grain .......................... 15
     - 2.1.1 Materials and Methods .......................... 15
     - 2.1.2 Result and Analysis .......................... 17
     - 2.1.3 Comparison with Previous Researches .......................... 20
   - 2.2 Conditional QTL Mapping for Developmental Behavior of Total Starch and Its Components Content in Wheat Grain .......................... 24
     - 2.2.1 Materials and Methods .......................... 24
     - 2.2.2 Result and Analysis .......................... 26
     - 2.2.3 Comparison of the Results with Ones of Previous Studies .......................... 38
2.3 Conditional QTL Mapping for Protein and Starch Interaction in Wheat Grain ........................................... 40
  2.3.1 Materials and Methods .................................. 40
  2.3.2 Result and Analysis ...................................... 43
  2.3.3 Comparison of the Results with Ones of Previous Studies ..................................................... 48

2.4 Conditional QTL Mapping for Sedimentation Values on Seven Quality Traits in Common Wheat .................... 49
  2.4.1 Materials and Methods .................................. 50
  2.4.2 Result and Analysis ...................................... 51
  2.4.3 Comparison of the Results with the Previous Studies ..................................................... 58

2.5 Genetic Analysis of Wheat Four Whiteness Conducted Through Conditional and Unconditional QTL Mappings .... 58
  2.5.1 Materials and Methods .................................. 59
  2.5.2 Result and Analysis ...................................... 61

2.6 Epistatic Effects of Unconditional and Conditional QTL Mapping of Flour Whiteness .......................... 66
  2.6.1 Comparison of the Results with the Previous Studies ..................................................... 68

2.7 Conditional QTL Mapping for Wheat Seed Protein-Fraction Contents at Different Developmental Stages ........ 70
  2.7.1 Materials and Methods .................................. 70
  2.7.2 Result and Analysis ...................................... 72
  2.7.3 Comparison of the Results with the Previous Studies ..................................................... 85

References ................................................................................................................................. 86

3 Conditional QTL Mapping of Wheat Main Yield Traits ............ 89
  3.1 Conditional QTL Mapping for Wheat Canopy Traits Under Two Nitrogen Application Levels .................... 89
    3.1.1 Materials and Methods .................................. 90
    3.1.2 Result and Analysis ...................................... 91
    3.1.3 Comparison of the Results with the Previous Studies ..................................................... 98

  3.2 Conditional QTL Mapping for Plant Height at Different Developmental Stages ............................. 98
    3.2.1 Materials and Methods .................................. 99
    3.2.2 Result and Analysis ...................................... 100
    3.2.3 Comparison of the Results with Ones of Previous Studies ..................................................... 105

  3.3 Conditional QTL Mapping for Wheat Spike Dry Weight and Thousand-Kernel Weight at Different Developmental Stages ................................................................. 106
3.3.1 Materials and Methods ........................................... 106
3.3.2 Result and Analysis ............................................. 108
3.3.3 Comparison of the Results with Previous Studies .......... 119

3.4 Conditional QTL Mapping for Wheat Kernels Weight per Spike at Different Developmental Stages .................. 120
3.4.1 Materials and Methods ........................................... 120
3.4.2 Result and Analysis ............................................. 121
3.4.3 Comparison of the Results with Ones of Previous Studies ......................................................... 126

3.5 Conditional QTL Mapping for Wheat Grain Yield per Plant at Different Developmental Stages .................. 126
3.5.1 Materials and Methods ........................................... 127
3.5.2 Result and Analysis ............................................. 127
3.5.3 Comparison of the Results with Ones of Previous Studies ......................................................... 132

3.6 Conditional QTL Mapping for Wheat Kernel Weight-Related Traits in Multiple Genetic Background .......... 133
3.6.1 Materials and Methods ........................................... 133
3.6.2 Result and Analysis ............................................. 135
3.6.3 Comparison of the Results with the Previous Studies ......................................................... 139

3.7 Conditional QTL Mappings Among Three Key Yield Components in Common Wheat .......................... 144
3.7.1 Materials and Methods ........................................... 145
3.7.2 Result and Analysis ............................................. 146
3.7.3 Comparison of the Results with the Previous Studies ......................................................... 161

3.8 Conditional QTL Mapping for Yield and Its Three Components in Common Wheat .......................... 162
3.8.1 Results of Conditional QTL Analysis on the Yield and Main Yield Components .......................... 162
3.8.2 Result and Analysis ............................................. 163
3.8.3 Comparison of the Results with Previous Studies ......................................................... 167

References ................................................................. 168

4 Roles of Conditional QTL in Crop Breeding and Cultivation ......................................................... 173
4.1 Applications of Conditional QTL Mapping to Crop Molecular Breeding ........................................... 173
4.2 Applications of Conditional QTL Mapping to Crop Molecular Cultivation ........................................... 174
4.3 Issues and Application Prospects of Conditional QTL Analysis ......................................................... 175

References ................................................................. 176
## Part II Molecular Marker-Assisted Breeding in Wheat

### 5 The Concept and Research Progress of MAS

5.1 Concept and Importance of Molecular Marker-Assisted Breeding

5.1.1 The Concept and Features of MAS

5.1.2 The Importance of MAS

5.2 Research Progress of the Molecular Marker-Assisted Breeding

5.2.1 International Research Progress of Molecular Marker-Assisted Breeding

5.2.2 Inland Research Progress of Molecular Marker-Assisted Breeding

References

### 6 Exploration of Molecular Markers and Creation of Molecular Breeding Elements

6.1 Exploration of Molecular Markers

6.1.1 Development Methods of Molecular Markers

6.1.2 Types and Features of Molecular Markers

6.1.3 The Widely Used Molecular Markers and Their Development Methods

6.1.4 DNA Markers Based on Restriction Enzyme Digestion and PCR

6.1.5 DNA Markers Based on Single Nucleotide Polymorphisms (SNP)

6.2 Examples of Molecular Markers’ Development

6.2.1 The Detection Primers of Molecular Marker Closely Linked with the Main QTL of Wheat Spike Length and Its Application

6.2.2 Development of Molecular Marker QGW4B.4-CAPS Related Thousand Kernel Weight

6.2.3 Development of Molecular Marker QGW6A-232 CAPS Related to Thousand Kernel Weight

6.3 Creation and Application of Molecular Breeding Elements with Superior QTL Allele

6.3.1 Clarifying the Implication of Negative and Positive Values of QTL Additive

6.3.2 Determine the Source of Favorable QTL Gene

6.3.3 Creating the Breeding Element

6.3.4 Obtaining the Molecular Marker of Breeding Elements and Its Application

References
7 The Technology Roadmap by MAS

7.1 The Technical Route of Many Loci by MAS in Whole Course of Conventional Breeding

7.1.1 Selecting the Parents and Arranging the Combinations According to Gene/QTL Presence or Absence and Recombination

7.1.2 Selecting the F1 Combinations and Determining the Population of F2 Generation

7.1.3 Selecting the Good Lines According to Track the Aiming Gene/QTL and Phenotype Identification

7.1.4 Identification Strains with the Aiming Gene/QTL

7.2 The Technology Route of Gene/QTL Transferring by MAS in Backcross Breeding

7.3 The Technology Route of Gene/QTL Pyramiding by MAS in Step-Cross Breeding

7.4 The Technology Roadmap of Breeding by Design Using MAS

8 Molecular Markers of Yield Traits and Their Application

8.1 Molecular Markers of Yield Traits

8.1.1 Molecular Markers of Wheat Yield Obtained by QTL Mapping

8.1.2 Molecular Markers Used Better in Breeding for Wheat Yield

8.2 The Applications of Molecular Markers Relating with Yield Traits

8.2.1 The Application of Molecular Markers Related Grain Number

8.2.2 Functional Identification of the Markers Hap-6A-G/A on Wheat Grain Weight

8.2.3 Selecting the Grain Weight by MAS Using the Markers Hap-6A-P1/P2

8.2.4 The Application of Spike Length Gene by MAS

8.2.5 The Application of Other Markers with Yield-Related Traits

References

9 Molecular Markers of Quality Traits and Their Applications

9.1 Molecular Markers of Quality Traits

9.1.1 Molecular Markers of Quality Traits by QTL Mapping

9.1.2 The Better Molecular Markers Used in Breeding for Wheat Quality
