## Contents

1 Classical Continuous Models and Their Analysis  
1.1 The Basic Equations  
1.1.1 The Acoustics Equation  
1.1.2 Maxwell’s Equations  
1.1.3 The Linear Elastodynamics System  
1.1.4 Boundary Conditions  
1.2 Functional Issues  
1.2.1 Some Functional Spaces  
1.2.2 Variational Formulations  
1.2.3 Energy Identities  
1.2.4 Well-Posedness Results of Waves Equations  
1.3 Plane Wave Solutions  
1.3.1 A General Solution of the Homogeneous Wave Equation  
1.3.2 Application to Maxwell’s Equations  
1.3.3 The 2D Case  
1.3.4 Application to the Isotropic Linear Elastodynamics System  
References  

2 Definition of Different Types of Finite Elements  
2.1 1D Mass-Lumping and Spectral Elements  
2.1.1 A Complex Solution for a Simple Problem  
2.1.2 Mass-Lumping  
2.1.3 Spectral Elements  
2.1.4 Nodal and Modal Elements  
2.2 Quadrilaterals and Hexahedra  
2.2.1 Higher-Dimensional Tensor Quadrature Rules  
2.2.2 Tensor Unit Spectral Elements  
2.2.3 Extension to Quadrilaterals and Hexahedra
