# Contents

1 The Function Spaces .................................. 1
   1.1 Preliminaries ........................................... 1
   1.2 Lebesgue Spaces with Variable Exponents .......... 4
       1.2.1 Definition and Basic Properties ............... 4
       1.2.2 Equivalent Norm and Completeness of $L^{p(\cdot)}(\Omega)$ ... 12
       1.2.3 Dense Sets in $L^{p(\cdot)}(\Omega)$ ............... 16
   1.3 Sobolev Spaces with Variable Exponents ............ 18
   1.4 Anisotropic Spaces of Functions Depending on $x$ and $t$ .... 22
       1.4.1 Approximation by Smooth Functions .......... 23
       1.4.2 A Subspace of $W(Q)$ ......................... 27
   1.5 Formulas of Integration by Parts .................... 29
   1.6 Embedding Theorems in Anisotropic Spaces .......... 34
   1.7 Interpolation Inequalities ........................... 40

2 A Porous Medium Equation with Variable Nonlinearity .... 45
   2.1 Introduction ............................................. 45
   2.2 Model Equation: Assumptions and Results ............ 46
   2.3 Regularization ........................................... 47
   2.4 A Priori Estimates ...................................... 48
   2.5 Passage to the Limit .................................... 54
   2.6 Uniqueness of Weak Solutions ....................... 56
   2.7 Equations with Lower-Order Terms .................... 60
   2.8 Equations with Anisotropic Nonlinearity .......... 69
   2.9 Stationary Solutions ................................. 70
   2.10 Remarks ............................................... 79

3 Localization of Solutions of the Generalized Porous Medium Equation ........................... 81
   3.1 Notation and Assumptions ............................ 82
   3.2 Finite Speed of Propagation .......................... 83
### Anisotropic Equations with Variable Growth and Coercivity Conditions

5 Space Localization of Energy Solutions ................................. 185
  5.1 Introduction ........................................................... 185
  5.2 Localization via Diffusion-Absorption Balance .................... 187
    5.2.1 The Basic Energy Relation ................................. 188
    5.2.2 Finite Speed of Propagation of Disturbances ............... 189
    5.2.3 The Waiting Time Property ................................. 197
  5.3 Localization Caused by Anisotropic Diffusion .................... 198
    5.3.1 Differential Inequality for the Energy Function .......... 201
    5.3.2 Directional Stable Localization .......................... 204
    5.3.3 Infinite Waiting Time ................................. 205
  5.4 Localized Stationary Solutions .................................. 208
  5.5 Remarks .............................................................. 213
    5.5.1 Equations of General Form ................................. 214
    5.5.2 On the Cauchy Problem ..................................... 215
    5.5.3 Localized Unbounded Solutions: An Example ................ 216

6 Extinction in a Finite Time and the Large Time Behavior .......... 219
  6.1 Introduction ........................................................... 219
  6.2 The Energy Relations ............................................... 221
    6.2.1 Estimate on the Total Energy ............................ 222
  6.3 Differential Inequality for the Energy Function ................. 224
  6.4 Vanishing in a Finite Time ......................................... 227
    6.4.1 Sufficient Conditions for the Finite Time Extinction ...... 227
    6.4.2 On the Balance Between Slow and Fast Diffusion ........... 229
  6.5 Vanishing at a Prescribed Moment ................................ 231
  6.6 Large Time Behavior ................................................. 234
  6.7 Limit Cases ........................................................... 236
  6.8 Remarks .............................................................. 238

7 Blow-up in Equations with Variable Nonlinearity .................... 241
  7.1 Semilinear Equation with Variable Source ......................... 242
    7.1.1 The Differential Inequality .............................. 243
    7.1.2 Analysis of the Differential Inequality .................... 245
  7.2 Equations with Vanishing Sources ................................ 247
  7.3 Various Extensions .................................................. 250
    7.3.1 Eventually Linear Equations ............................... 250
    7.3.2 Equations with Vanishing Sources .......................... 251
    7.3.3 Regional Blow-up ............................................. 251
    7.3.4 Equations with Nonlocal Sources ........................... 252
    7.3.5 Semilinear Equations of General Form ....................... 254
7.4 Equations with Anisotropic $p(x)$-Growth
7.4.1 The Energy Relations
7.4.2 Second-Order Differential Inequalities
7.5 Remarks
7.5.1 Higher-Order Equations
7.5.2 $p(x,t)$-Curl Systems Arising in Electromagnetism
7.5.3 Navier-Stokes Type Equations with Variable Structure

8 Equations with Double Isotropic Nonlinearity
8.1 Assumptions and Results
8.2 Regularized Problems
8.2.1 A Priori Estimates
8.3 Existence of Weak Solution
8.3.1 Step 1: $J_1^{(\varepsilon)} \to 0$ as $\varepsilon \to 0$
8.3.2 Step 2: $J_2^{(\varepsilon)} \to F(v,v)$ as $\varepsilon \to 0$
8.4 Comparison Principle and Uniqueness for Strong Solutions
8.4.1 Proof of Theorem 8.2: The case $a = 1$
8.4.2 Proof of Theorem 8.3: The case $a = 0$
8.5 Existence of Solutions $u \in \mathcal{W}(Q)$: $L^1$-Estimate for $\partial_t \Phi(z,v)$

9 Strong Solutions of Doubly Nonlinear Anisotropic Equations
9.1 Existence of Strong Solutions
9.2 Regularized Problem
9.2.1 Galerkin’s Approximations
9.2.2 A Priori Estimates
9.3 The Energy Inequality
9.4 Weak Solution of Regularized Problem
9.5 Bounded Solutions of Regularized Problem
9.6 Proof of the Existence Theorem
9.7 The Energy Relations for Strong Solutions

10 Anisotropic Equations with Double Nonlinearity: Blow-up and Vanishing
10.1 Strong Solutions
10.2 Sufficient Conditions of the Finite Time Blow-up
10.3 Embedding Inequalities in Anisotropic Spaces
10.4 Ordinary Differential Inequalities for the Energy Function
10.5 Extinction in a Finite Time ........................................ 335
10.5.1 The Regular Case ........................................... 335
10.5.2 The Limit Case .............................................. 337
10.5.3 Equations with Critical Growth ............................ 339
10.6 Large Time Behavior ........................................... 340

11 Wave Equation with $p(x, t)$-Laplacian ....................... 343
11.1 Local and Global Existence of Weak Solutions .............. 345
11.1.1 Galerkin’s Approximations ......................... 347
11.1.2 Compactness and Passage to the Limit ................. 354
11.2 Nonexistence of Global Solutions: Finite Time Blow up ... 359
11.3 Young Measure Solutions ................................ 364
11.3.1 Passage to the Limit as $\varepsilon \to 0$ ................. 365
11.3.2 Lower Estimates for $\|u^\varepsilon\|_{\sigma, \Omega}$ Blow up .... 367

12 Semilinear Hyperbolic Equations ................................ 369
12.1 Weak and Strong Solutions ................................. 370
12.2 Local Existence Theorems .................................. 371
12.3 Nonexistence of Global Nonnegative Solutions .......... 381
12.3.1 Ordinary Differential Inequalities ................. 381
12.3.2 Blow-up .................................................. 385
12.3.3 Regional Blow-up .................................... 388
12.4 Semilinear Equations of General Form ................... 389
