## Contents

1 Calculus of Variations on Fibre Bundles ........................................ 1  
1.1 Infinite Order Jet Formalism .................................................. 1  
1.2 Variational Bicomplex ...................................................... 7  
   1.2.1 Cohomology of the Variational Bicomplex ............... 9  
1.3 Lagrangian Formalism ...................................................... 12

2 Noether’s First Theorem ....................................................... 17  
2.1 Lagrangian Symmetries ...................................................... 17  
2.2 Gauge Symmetries: Noether’s Direct Second Theorem ..... 20  
2.3 Noether’s First Theorem: Conservation Laws .................. 23

3 Lagrangian and Hamiltonian Field Theories ............................ 27  
3.1 First Order Lagrangian Formalism ............................... 27  
3.2 Cartan and Hamilton–De Donder Equations .................... 30  
3.3 Noether’s First Theorem: Energy-Momentum Currents .... 32  
3.4 Conservation Laws in the Presence of a Background Field ... 34  
3.5 Covariant Hamiltonian Formalism ................................. 36  
3.6 Associated Lagrangian and Hamiltonian Systems .......... 41  
3.7 Noether’s First Theorem: Hamiltonian Conservation Laws ... 47  
3.8 Quadratic Lagrangian and Hamiltonian Systems .......... 49

4 Lagrangian and Hamiltonian Nonrelativistic Mechanics .......... 59  
4.1 Geometry of Fibre Bundles over \( \mathbb{R} \) .......................... 60  
4.2 Lagrangian Mechanics. Integrals of Motion .................... 63  
4.3 Noether’s First Theorem: Energy Conservation Laws ...... 67  
4.4 Gauge Symmetries: Noether’s Second and Third Theorems ... 71  
4.5 Non-autonomous Hamiltonian Mechanics ......................... 73  
4.6 Hamiltonian Conservation Laws: Noether’s Inverse First  
   Theorem .............................................................. 80  
4.7 Completely Integrable Hamiltonian Systems ................... 84
5 Global Kepler Problem ........................................ 93

6 Calculus of Variations on Graded Bundles .................. 103
   6.1 Grassmann-Graded Algebraic Calculus ..................... 103
   6.2 Grassmann-Graded Differential Calculus .................. 106
   6.3 Differential Calculus on Graded Bundles ............... 109
   6.4 Grassmann-Graded Variational Bicomplex ............... 121
   6.5 Grassmann-Graded Lagrangian Theory .................... 127
   6.6 Noether’s First Theorem: Supersymmetries ........... 129

7 Noether’s Second Theorems .................................. 135
   7.1 Noether Identities: Reducible Degenerate Lagrangian Systems .................. 136
   7.2 Noether’s Inverse Second Theorem ....................... 145
   7.3 Gauge Supersymmetries: Noether’s Direct Second Theorem .... 148
   7.4 Noether’s Third Theorem: Superpotential ............... 152
   7.5 Lagrangian BRST Theory ................................ 155

8 Yang–Mills Gauge Theory on Principal Bundles ............ 163
   8.1 Geometry of Principal Bundles ......................... 163
   8.2 Principal Gauge Symmetries ............................ 171
   8.3 Noether’s Direct Second Theorem: Yang–Mills Lagrangian .... 173
   8.4 Noether’s First Theorem: Conservation Laws .......... 175
   8.5 Hamiltonian Gauge Theory .............................. 177
   8.6 Noether’s Inverse Second Theorem: BRST Extension .... 179

9 SUSY Gauge Theory on Principal Graded Bundles .......... 183

10 Gauge Gravitation Theory on Natural Bundles ............. 189
   10.1 Relativity Principle: Natural Bundles .................. 189
   10.2 Equivalence Principle: Lorentz Reduced Structure .... 191
   10.3 Metric-Affine Gauge Gravitation Theory ............... 194
   10.4 Energy-Momentum Gauge Conservation Law ............ 197
   10.5 BRST Gravitation Theory .............................. 199

11 Chern–Simons Topological Field Theory .................... 201

12 Topological BF Theory ..................................... 207

Glossary .......................................................... 211

Appendix A: Differential Calculus over Commutative Rings .... 213

Appendix B: Differential Calculus on Fibre Bundles .......... 227
Noether's Theorems
Applications in Mechanics and Field Theory
Sardanashvily, G.
2016, XVII, 297 p., Hardcover
A product of Atlantis Press
