

# Contents

<b>1</b>	<b>Elements of the Time Scale Calculus</b> . . . . .	1
1.1	Forward and Backward Jump Operators, Graininess Function . . . .	1
1.2	Differentiation. . . . .	8
1.3	Mean Value Theorems . . . . .	19
1.4	Integration . . . . .	22
1.5	The Exponential Function. . . . .	39
1.5.1	Hilger's Complex Plane . . . . .	39
1.5.2	Definition and Properties of the Exponential Function . . . .	49
1.5.3	Examples for Exponential Functions . . . . .	63
1.6	Hyperbolic and Trigonometric Functions . . . . .	65
1.7	Dynamic Equations. . . . .	67
1.8	Advanced Practical Exercises . . . . .	74
<b>2</b>	<b>Introductory Concepts of Integral Equations on Time Scales</b> . . . . .	77
2.1	Reducing Double Integrals to Single Integrals . . . . .	80
2.2	Converting IVP to Generalized Volterra Integral Equations . . . . .	82
2.3	Converting Generalized Volterra Integral Equations to IVP . . . . .	88
2.4	Converting BVP to Generalized Fredholm Integral Equation . . . . .	95
2.5	Converting Generalized Fredholm Integral Equation to BVP . . . . .	105
2.6	Solutions of Generalized Integral Equations and Generalized Integro-Differential Equations. . . . .	116
2.7	Advanced Practical Exercises . . . . .	121
<b>3</b>	<b>Generalized Volterra Integral Equations.</b> . . . . .	131
3.1	Generalized Volterra Integral Equations of the Second Kind . . . . .	131
3.1.1	The Adomian Decomposition Method. . . . .	131
3.1.2	The Modified Decomposition Method. . . . .	138
3.1.3	The Noise Terms Phenomenon . . . . .	144
3.1.4	Differential Equations Method. . . . .	146
3.1.5	The Successive Approximations Method. . . . .	158

3.2	Conversion of a Generalized Volterra Integral Equation of the First Kind to a Generalized Volterra Integral Equation of the Second Kind . . . . .	163
3.3	Existence and Uniqueness of Solutions . . . . .	166
3.3.1	Preliminary Results . . . . .	166
3.3.2	Existence of Solutions of Generalized Volterra Integral Equations of the Second Kind. . . . .	172
3.3.3	Uniqueness of Solutions of Generalized Volterra Integral Equations of Second Kind. . . . .	175
3.3.4	Existence and Uniqueness of Solutions of Generalized Volterra Integral Equations of the First Kind . . . . .	177
3.4	Resolvent Kernels. . . . .	178
3.5	Application to Linear Dynamic Equations . . . . .	184
3.6	Advanced Practical Exercises . . . . .	192
<b>4</b>	<b>Generalized Volterra Integro-Differential Equations . . . . .</b>	<b>197</b>
4.1	Generalized Volterra Integro-Differential Equations of the Second Kind. . . . .	197
4.1.1	The Adomian Decomposition Method. . . . .	197
4.1.2	Converting Generalized Volterra Integro-Differential Equations of the Second Kind to Initial Value Problems. . . . .	206
4.1.3	Converting Generalized Volterra Integro-Differential Equations of the Second Kind to Generalized Volterra Integral Equations . . . . .	212
4.2	Generalized Volterra Integro-Differential Equations of the First Kind. . . . .	219
4.3	Advanced Practical Exercises . . . . .	223
<b>5</b>	<b>Generalized Fredholm Integral Equations. . . . .</b>	<b>227</b>
5.1	Generalized Fredholm Integral Equations of the Second Kind . . . . .	227
5.1.1	The Adomian Decomposition Method. . . . .	227
5.1.2	The Modified Decomposition Method. . . . .	232
5.1.3	The Noise Terms Phenomenon . . . . .	237
5.1.4	The Direct Computation Method. . . . .	241
5.1.5	The Successive Approximations Method. . . . .	246
5.2	Homogeneous Generalized Fredholm Integral Equations of the Second Kind. . . . .	251
5.3	Fredholm Alternative Theorem. . . . .	258
5.3.1	The Case When $\int_a^b \int_a^b  K(x, Y) ^2 \Delta X \Delta Y < 1$ . . . . .	258
5.3.2	The General Case . . . . .	264
5.3.3	Fredholm's Alternative Theorem. . . . .	274
5.4	The Schmidt Expansion Theorem and the Mercer Expansion Theorem . . . . .	275

5.4.1	Operator-Theoretical Notations . . . . .	275
5.4.2	The Schmidt Expansion Theorem . . . . .	282
5.4.3	Application to Generalized Fredholm Integral Equation of the First Kind . . . . .	288
5.4.4	Positive Definite Kernels. Mercer’s Expansion Theorem . . . . .	289
5.5	Advanced Practical Exercises . . . . .	298
<b>6</b>	<b>Hilbert-Schmidt Theory of Generalized Integral Equations with Symmetric Kernels . . . . .</b>	<b>301</b>
6.1	Schmidt’s Orthogonalization Process . . . . .	301
6.2	Approximations of Eigenvalues . . . . .	307
6.3	Inhomogeneous Generalized Integral Equations . . . . .	314
<b>7</b>	<b>The Laplace Transform Method . . . . .</b>	<b>321</b>
7.1	The Laplace Transform. . . . .	321
7.1.1	Definition and Examples . . . . .	321
7.1.2	Properties of the Laplace Transform . . . . .	325
7.1.3	Convolution and Shifting Properties of Special Functions . . . . .	333
7.2	Applications to Dynamic Equations . . . . .	347
7.3	Generalized Volterra Integral Equations of the Second Kind . . . . .	352
7.4	Generalized Volterra Integral Equations of the First Kind . . . . .	357
7.5	Generalized Volterra Integro-Differential Equations of the Second Kind. . . . .	360
7.6	Generalized Volterra Integro-Differential Equations of the First Kind. . . . .	366
7.7	Advanced Practical Exercises . . . . .	370
<b>8</b>	<b>The Series Solution Method . . . . .</b>	<b>375</b>
8.1	Generalized Volterra Integral Equations of the Second Kind . . . . .	375
8.2	Generalized Volterra Integral Equations of the First Kind . . . . .	384
8.3	Generalized Volterra Integro-Differential Equations of the Second Kind. . . . .	387
<b>9</b>	<b>Non-linear Generalized Integral Equations . . . . .</b>	<b>395</b>
9.1	Non-linear Generalized Volterra Integral Equations . . . . .	395
9.2	Non-linear Generalized Fredholm Integral Equations . . . . .	396
	<b>References . . . . .</b>	<b>399</b>
	<b>Index . . . . .</b>	<b>401</b>
