Preface	vii
1. Introduction	1
2. Linear and quasi-linear systems with piecewise constant argument	17
2.1 Linear homogeneous systems	18
2.2 Quasi-linear systems	23
2.3 Stability	27
Notes	31
3. The reduction principle for systems with piecewise constant argument	33
3.1 Introduction	33
3.2 Existence of integral surfaces	35
3.3 Stability of the zero solution	42
3.4 Stability of the integral surface	43
3.5 Reduction principle	45
Notes	48
4. The small parameter and differential equations with piecewise constant argument	49
4.1 Periodic solutions: the non-critical case	49
4.2 Dependence of solutions on parameters	53
4.3 Periodic solutions: the critical case	59
Notes	68
5. Stability	71
5.1 The Lyapunov-Razumikhin method	71
5.1.1 Theoretical results	71
5.1.2 Examples	78
5.2 The method of Lyapunov functions	80
5.2.1 Main results	81
5.2.2 Applications to the logistic equation	86
Notes	88
6. The state-dependent piecewise constant argument	89
6.1 Introduction	89
6.2 Generalities	89
6.3 Quasilinear systems	93

6.4	Periodic solutions	98
6.5	Stability of the zero solution	100
	Notes	104
7.	Almost periodic solutions	105
7.1	Introduction and Preliminaries	105
7.2	Wexler sequences	108
7.3	Bohr-Wexler almost periodic functions	112
7.4	Almost periodic solutions	114
7.5	Stability	116
	Notes	119
8.	Stability of neural networks	121
8.1	Introduction	121
8.2	Preliminaries	122
8.3	Main results	127
8.4	Illustrative examples	129
	Notes	132
9.	The blood pressure distribution	133
9.1	Systemic arterial pressure	133
9.1.1	Background on systemic arterial pressure	133
9.1.2	The regular and irregular behavior of systemic arterial pressure when mo- ments of the heart contraction are prescribed	135
9.1.3	Regular behavior of systemic arterial pressure with non prescribed moments of the heart contraction	140
9.1.4	Investigation of stability	141
9.1.5	Conclusion	142
9.2	The global model	143
9.2.1	Introduction and Preliminaries	143
9.2.2	Bounded, periodic, eventually periodic and almost periodic solutions	147
9.2.3	Stability and positiveness	152
9.2.4	Discussion	154
9.3	Chaotic dynamics	156
9.3.1	Introduction and Preliminaries	157
9.3.2	Stability and positiveness of bounded and periodic solutions	158
9.3.3	Blood pressure dynamics as a special initial value problem: chaotic behavior	160
9.3.4	Periodic solutions revisited. Eventually periodic solutions	161
9.3.5	Chaos	164
9.3.6	Example	169
	Notes	171
10.	Integrate-and-fire biological oscillators	175
10.1	Introduction	175
10.2	The prototype map	177
10.3	Non-identical oscillators	184
10.4	The Kamke condition	189
10.5	The delayed pulse-coupling	191
10.5.1	The couple of identical oscillators	191

10.5.2	Non-identical oscillators: the general case	195
10.5.3	The simulation result	197
Notes	197
Bibliography		201

Nonlinear Hybrid Continuous/Discrete-Time Models

Akhmet, M.

2011, XIII, 216 p., Hardcover

ISBN: 978-94-91216-02-2

A product of Atlantis Press
