MTSE : Editorial for Volume I	vii
Foreword	ix
Preface	xi
1. Polynomial Interpolation Formulas	1
1.1 Existence based on the Vandermonde matrix	1
1.2 The Lagrange interpolation formula	5
1.3 Divided differences and the Newton interpolation formula	8
1.4 Hermite interpolation	14
1.5 Exercises	22
2. Error Analysis For Polynomial Interpolation	25
2.1 General error estimate	25
2.2 The Chebyshev interpolation points	28
2.3 Exercises	34
3. Polynomial Uniform Convergence	37
3.1 General definition and examples	37
3.2 The Bernstein polynomials	51
3.3 Bernstein polynomial approximation	53
3.4 Shape-preservation	61
3.5 Convergence rate	67

3.6	Exercises	68
4.	Best Approximation	71
4.1	Existence in normed linear spaces	71
4.2	Uniqueness in inner product spaces	77
4.3	Exercises	81
5.	Approximation Operators	85
5.1	Linearity and exactness	85
5.2	Boundedness and Lebesgue constants	87
5.3	The approximation error	93
5.4	Exercises	97
6.	Best Uniform Polynomial Approximation	99
6.1	A necessary condition	99
6.2	The equi-oscillation property	102
6.3	Uniqueness	108
6.4	The approximation operator	110
6.5	An application in polynomial interpolation	113
6.6	Explicit computation for specific cases	118
6.7	Exercises	123
7.	Orthogonality	127
7.1	The fundamental characterising condition	127
7.2	The Gram matrix	132
7.3	Orthogonal bases	136
7.4	Orthogonal polynomials	144
7.5	The Legendre polynomials	149
7.6	Chebyshev polynomials and orthogonality	155
7.7	Exercises	162
8.	Interpolatory Quadrature	167
8.1	General formulation, exactness and convergence	167
8.2	Gauss quadrature	172

8.3	The Clenshaw-Curtis quadrature rule	179
8.4	Newton-Cotes quadrature	190
8.5	Error analysis for Newton-Cotes quadrature	200
8.6	Composite Newton-Cotes quadrature	214
8.7	Exercises	227
9.	Approximation of Periodic Functions	233
9.1	Trigonometric polynomials	233
9.2	A Weierstrass result for periodic functions	238
9.3	The Fourier series operator	243
9.4	Fourier series	257
9.5	The Lebesgue constant in the maximum norm	262
9.6	Sufficient condition for uniform convergence	273
9.7	Exercises	283
10.	Spline Approximation	289
10.1	Spline spaces	289
10.2	<i>B</i> -splines	295
10.3	Spline interpolation	312
10.4	Local quasi-interpolation	322
10.5	Local spline interpolation	336
10.6	Uniform convergence and error analysis	354
10.7	Spline quadrature and the Gregory rule	367
10.8	Exercises	386
Index		401
